American Railroad Journal.

Saturday, September 8, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

Fluctuations in the Earnings of American Railroads.

One of the objections urged by foreigners against investments in railroads in this country, is the great fluctuations that take place in the amount of their revenues, and consequently in the market value of their securities. The uniformity in the receipts of the railways in the old country are often referred to by way of contrast, and an inference drawn therefrom very unfavorable to those of our own. In fact, the excessive variations in the earnings of Western roads, particularly, has been regarded as a feature peculiar to those of this country, and as a strong argument against having anything to do with them.

This notion is likely to be greatly changed by the result of the present year. The period from the commencement of railway enterprises in the West, till 1856, was one of uniform prosperity. The crops, year after year, were good, and prices for all kinds of breadstuffs high. This period, too, was marked by the extraordinary emigration from the Eastern to the Western States. Since 1850 3,000,000 of immigrants have landed on our shores, most of whom have been sent far into the interior. The increase in the population of Illinois for the decade that has just passed, which has equaled very nearly, if not quite, 1,000,000, a gain of more than 100 per cent., is a good illustration of the extent of this mighty movement. Several other Western States have increased even in greater ratio. The placing of 3 or 4,000,000 of people from the extreme East to the West, with all their effects, in the course of a very few years, was of itself an immense business for one road.

With the close of the year 1857, this migration mainly ceased. It was followed by two unpropiti-

ous seasons, and with low prices for nearly all kinds of produce, for the markets of the Old World controls the price of breadstuffs in a country like our own, which, with small crops, always has a surplus beyond the domestic wants of our people. Previous to 1857, the rapid settlement of the country, and the immense sums of money sent West for investment, in one way or another, had stimulated speculation and improvidence to an extraordinary degree, so that when the reverse came, hardly a person escaped. Nearly everybody was entangled with his own debts, or those of his neighbors or friends. With the failure of crops, the means of recovery for the whole conntry was also lost. The consequence was that, from July, 1857, to July, 1860, the earnings of Western railroads fell off one-half. Most of the companies in pushing forward what were considered necessary works of improvement, in anticipation of future wants, found themselves caught in the storm. They could no longer borrow, and were forced to resort to their net earnings to pay off pressing liabilities. Dividends were suspended almost without exception, and a large number of companies, only a few months previously in the highest credit, were compelled to suspend payment on their sacred obligations.

The disaster suggested the proper remedy—the introduction upon all lines of the most rigid economies. The conditions of many companies were in this way steadily improved, without any increase in the traffic. They had worked their way into easy financial condition, when the present year of plenty came round, in which the labor of the husbandman has, for the first time for several years, been most bountifully rewarded. A single crop has changed the whole aspect of affairs. The seven North-western States have undoubtedly 50,000,000 bushels of wheat beyond their wants for consumption or seed. All this is in demand, at nearly twice the price of the wretched crops for two years past. Of Indian corn, which is really a much more valuable crop in the aggregate than wheat, we can hardly compute the amount. We suppose the estimate of 150,000,000 bushels for Illinois alone is not too high. The crop is equally good in all the Northern States. Only a very small per centage ever finds its way to market in the berry. It is converted into a great many kinds of other values, and its influence will be seen in the traffic of our railroads for fully a year to come.

The present crop, which has given value to the labor of the country, has brought up the earnings of our railroads to what they were in their most prosperous days. All that is wanted to ensure a steady increase, are fair crops and prices for the future. Europe has had for several consecutive years past good harvests, while our own have been greatly deficient. It is fair to presume that the continents have changed places—we have now a right to expect from the operation of ordinary natural lands, a series of good harvest and good prices to compensate for our poor ones. If so, we may expect a season of prosperity for our railroads, fully up to any yet experienced.

We have not only very excellent harvests in this country, but fortunately they are much more forward than usual. An immense amount, consequently, can be sent forward before the winter sets in. There have been 5,582,189 bushels of wheat received at Chicago for the present, against 2,500 for a similar period for the past year, and 13,130,000 of corn against about 3,800,000 for 1857. These figures show the cause of the prosperous condition of Western roads. The receipts of grain at Chicago the present year bid fair to exceed three times those for 1859. The materials for an abundant traffic for Western for a year to come is secured. All that is wanting to place that portion of the country on its feet again, and to realize all the promises ever made in reference to it, is a few more seasons like the present.

Insurance Dividends.

The Jefferson Insurance Company has declared a semi-annual dividend of $3 per share, (10 per cent.) payable on demand. The Grocers' Fire Insurance Company, a semi-annual dividend of 6 per cent. payable on demand.

Cedar Valley Railroad.

This road, including all the property of the company, was sold at public auction, on the 17th ult., for one thousand dollars. It was bought by the Governor, on behalf of the State.

All the other roads have, or are to share, a similar fate. The first attempt at a system of internal improvement for this new State is thus brought to a disastrous conclusion. It is probable that another system will be immediately devised, better adopted to the wants and means of the State.

☞ Mr. Charles S. Seyton, of Seyton & Wainwright, has been admitted to membership in the Stock Exchange Board.

[We invite attention to the following interesting discription of the new mode of sinking Piles for the foundations of Bridges. The Bridge in question is over the Savannah River on the line of the Savannah and Charleston Railroad. The work was executed by the Trenton Locomotive and Machine Manufacturing Company, under the direction of its Engineer, Wm. Sooy Smith, Esq.,]

(For the American Railroad Journal.)

Pneumatic Piles.

Since I have been engaged in sinking piles for the piers of a bridge over the Savannah River, on the line of the Charleston and Savannah Railroad, I have frequently thought that a description of the method we use, would prove interesting to the general reader, and instructive to civil engineers, not already acquainted with it in all its details. And for this purpose I enclose to you the following account.

First, The characteristics of the stream and the material that forms its bed.

Second, The cylinders and machinery used in sinking them.

Third, The process of sinking the cylinders and its effects upon the workmen.

The Savannah river at the site of the bridge is about eleven hundred feet in width; its greatest depth being about ten feet at low tide-winter level. The tide rises about five feet. The maximum velocity of the current in the channel when the river is at ordinary stage, is about four miles, and during freshets, it reaches no less than seven or eight miles, per hour. There is no floating ice, and very little drift-wood brought down by the stream at any time.

The bed of the stream is composed of a sharp, shifting river sand to a depth of six feet. Through the next nine feet it is finer, and in some places approaches a quicksand in character. Then there is a stratum of very tenacious blue clay mud, two feet in thickness—next a bed of gravel eighteen inches thick, consisting of small, well rounded and polished pebbles. Below this there is a mixture of very fine sand clay, soft at the top but growing harder and harder as we descend through the first six or seven feet, where it becomes so hard as to yield very stubbornly to the pick. Into this indurated mixture we have sunk the cylinders from six to seven feet, or to a depth in the aggregate of thirty feet below the bed of of the river.

The difficulty of securing a good foundation for piers according to any of the methods heretofore commonly practiced in this country, as well as the consideration of economy induced the engineers of the Charleston and Savannah Railroad Company to adopt the pneumatic pile, as affording at once the cheapest and most practicable, permanent and reliable pier that could be chosen for the locality in question.

The cylinders are of cast iron, six feet exterior diameter and two inches thickness of metal. They are provided with flanges on the inside two inches in thickness, projecting three inches and pierced with forty holes each, to receive as many one inch bolts. These unite the different sections of the cylinders which are cast nine feet long each, and the ends truly faced so as to make air-tight joints. We make these joints with paint merely, without the use of rubber rings. There is no flange on the lower end of the bottom section of the piles, but this is turned off to a sharp edge, to diminish as far as possible, the resistance to sinking.

Care was taken to secure a close grained and homogeneous metal, and castings free from honeycomb, or any other defect.

The contract for furnishing all the material and machinery and sinking the cylinders was awarded to the Trenton Locomotive and Machine Manufacturing Company, Trenton, N. J., and the castings are such as to challenge criticism.

Two large flats were constructed, strongly built and firmly united, by heavy timbers running from outside to outside of the flats which are so placed as to leave a canal between them seven feet wide. This canal is decked over to within nine feet of the bow of the flats. The remainder of it is left open as a chamber in which to lower and sink the cylinders. Over this chamber is raised a strong pair of shear-poles from which the hoisting and lowering is done, by means of a wire rope, carried through a very heavy pair of iron double blocks, and taken back to a hoisting drum operated by a sixteen horse power steam engine, placed directly over the central canal and near the stern of the flats. There are four double acting air pumps, the crank shaft of which is coupled directly on that of the engine.

On each of the flats, there is a receiver twenty-seven feet long, and five feet eight inches interior diameter, formed of three sections of the cylinders used for the piles. These are connected with the air pumps and sinking cylinder, by pipes provided with suitable valves, so that the air may be exhausted from one or both at pleasure, and communication opened between one or both and the sinking cylinder.

There is an air-tight cap which can be firmly bolted upon the top of the cylinder, and this cap is sufficiently thick and strong to sustain the entire pressure of the atmosphere upon the area of

a circle five feet eight inches in diameter, when the air is exhausted from within.

There is also an air-chamber or air-lock, the bottom of which is of equal diameter with the cylinder, the upright or cylindrical part being four feet in diameter, and through the offset of the bottom thus formed, light is admitted into the inside of the pile through bull's eyes of glass. Two apertures are also made through this offset; through one of which a syphon pipe is introduced for the purpose of carrying away the water from within, when the material through which the cylinder has to be sunk is too impervious to allow the free escape of the water under the bottom of the cylinder, when air is forced into it through the other apertures above mentioned. There is a man-hole through the top and bottom of the air-lock through which the laborers can pass.

There is a windlass, the shaft of which runs right through the air-lock, so that it may be turned from without by men standing on the projection of the bottom of the air-lock. This windlass is for bringing up the material from the bottom into the air-lock. Through the upright side of the air-lock a chute passes, through which the contents of each sand-bag are discharged as it is brought up by the windlass. This supplementary lock or chute is my own invention, for which I have just received letters patent. Heretofore the sand-bags have been deposited in the air-chamber until it was filled, when it was opened and the bags taken out and emptied.

This rendered considerable space necessary in the air-lock, so that it had to be made of equal diameter with the cylinder. It was then out of the question to get sufficient natural light into the cylinder, and the lamps used by the workmen, burning in the compressed air, with a dense black smoke, almost suffocated them. Besides a scaffolding had to be erected for the men to stand upon who operated the windlass, and the material had to be handled twice, and the work was subject to constant interruptions. All this is avoided by the new form of air-lock.

We are now prepared to understand fully the mode of sinking the cylinders with the machinery just described.

If the water is sufficiently shallow, a single section is first lowered. But if the water is so deep as to require it, two sections are bolted together, and the cylinder thus formed is lowered away in that position. The cap is then bolted on its top and connected with the receivers—the intervening valves being closed. The air is then exhausted from the receivers, and when the cylinder is brought into a truly vertical position, the valves are opened, whereupon the air rushes from the cylinder into the receivers, drawing after it the water it contains. There is a current of sand and water created under the edge of the cylinder, and the whole pressure, due to the partial vacuum formed on the inside of the cylinder, is let fall upon the cap which forces the cylinder down until the resistance becomes greater than the pressure of the vacuum, reduced as it is by the slight leakage which is unavoidable, and by the sand and water that enters. The valves are again closed, the receivers emptied, and the operation repeated, until the resistance to the sinking of the cylinder becomes such as to arrest its progress under the pressure due to the most perfect vacuum that can be obtained. This has taken place in the material with which I have had to deal, at a depth of about eight feet below the bed of the river. Then the top of the cylinder is brought near the water surface, the cap is taken off and another section is put on. When the cylinder ceases to sink, the cap is taken off and the air-lock is put on. The workmen are shut within, and air is then forced in until the water either disappears through the material of the bottom, or rises through the syphon pipe and leaves the bottom dry. The material is then taken up in sand-bags, raised by the windlass, and discharged through the chute or supplementary lock as fast as it is brought up.

When the material has been excavated to the bottom of the cylinder, the workmen are ordered out, and the vacuum again created as before. We thus excavate and force the cylinder to follow the excavation by the atmospheric pressure alone, as far as we can drive it down in this way. When the resistance from friction, on the outside alone, becomes sufficient to prevent the further sinking of the cylinder from atmospheric pressure, if the cylinder has not reached the required depth, the pressure is increased by loading with railroad iron, or any other weighty material at hand. In one instance, I put on twenty tons of railroad iron cross-piled, on the top of the cylinder. Heretofore the material has always been taken out almost entirely by hand; but we now rely mainly upon a current of air, which we establish and maintain through the syphon pipe, to pick up and carry out the sand from the bottom. I had a piece of incompressible rubber hose manufactured, fitting over the wrought iron syphon pipe, and sliding freely upon it. Then, by means of a circular clamp, I can fit it at any point. This enables us to hold the foot of the pipe near the surface of the bottom, so as to allow the air forced into the cylinder to escape through it. And we find that a current of only five pounds to the square inch will convey sand and pebbles up through the syphon pipe, and discharge them into the open air as fast as two men can shovel the material to the mouth of the pipe.

The sand is discharged in a constant stream, and the pebbles are scattered like grape or canister shot from the mouth of the pipe. The excavation of the sand and gravel has thus become comparatively easy. But we find it extremely difficult to keep the cylinders in truly vertical position. The escape of the air forced in, under the lower edge of the cylinder, so disintegrates and stirs up the sand on the outside, that the lateral resistance, for the time being, is very slight, and if the resistance to sinking happens to differ ever so little on the opposite sides of the pile, there is a tendency in it to settle over towards the one upon which it is least. Pulling and hauling the cylinders into vertical position, raising and lowering the sections, taking off and putting on the caps and air lock, and making joints in the cylinders and syphon pipe, consume perhaps the larger portion of our time. When the piles are sunk to a depth of from six to seven feet in the hard bottom, sections will be cast of suitable length to bring them up to the proper level above the water surface. They are then to be finished with an ornamental capital or moulding, and filled with concrete.

The piers and abutments are formed of two piles each, united by horizontal and diagonal bracing; except the pivot pier for the draw, which consists of five piles, and the two adjoining piers of four piles each.

The effects produced upon different individuals by the pressure of air under which we are compelled to work, (sometimes 20 lbs. to the sq. inch) are most curious. In some it produces neuralgia, in others affections of the throat and chest. Standing in the air lock when the compressed air first enters, the pressure upon the ear drum is most painful, until the elasticity of the air on the inside and outside of the ear becomes equal; when the pain ceases. This equality can be established from time to time and the pain relieved by swallowing which opens the eustachian tube and allows the compressed air to enter the ear. The heat generated by friction in the pumps and pipes and by the compression of the air, so heats the current that enters the cylinder, that in the coldest weather we are made comfortable, while in the hot summer months we have found the heat insupportable, and have been obliged to discontinue the work until the weather becomes cooler. When the compressed air is allowed to escape into the external atmosphere suddenly, the expression produces an intense cold, which condenses the moisture in the air on the inside of the cylinders, and envelopes us in a thick fog.

The chill thus produced is very trying, and this change in the elasticity of the air is again accompanied by severe pain in the head.

When troubled with colds we find that the pain we suffer is greatly aggravated. But for all this we feel that we are rewarded by the belief that the work upon which we are engaged will last as long as time shall endure.

Wm. Sooy Smith, Civil Engineer.

Illinois River Railroad.

Alexander Studwell, Esq., of New York city, has furnished the money for the completion of the Illinois River Railroad bridge, and N. H. Decker, Esq., who has the contract for building the same, guaranties its being finished by the first of December next.—The work upon it was commenced yesterday, and knowing the energy and perseverance of Mr. Decker in such matters, we have no doubt but that the bridge will be completed by the time mentioned. The Illinois River railroad is now open from Pekin to Virginia, in Cass county, a distance of sixty miles, and we may look with confidence upon the cars reaching this city by the first of January. This road is of vital importance to Peoria, and one in which our citizens have a deep interest, and every assistance should be rendered it regarding the right of way so that no obstacles be thrown in the path of its advancement; for, by benefiting the road we benefit every man who is in any way connected with the business prosperity of our city.—*Peoria Union, Aug. 28th.*

CAR DUCK.

HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, 11 to 140 inches, PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.

Notice to Contractors.

ENGINEER'S OFFICE, COVINGTON & OHIO R. R.,
At Callaghan's, Alleghany County, Va., 27th Aug., 1860.

SEALED PROPOSALS, addressed to the undersigned, and endorsed "Proposals," will be received at this office until 12 o'clock M. of Wednesday, the 26th of September next:

For the construction of a Tunnel near 3,700 feet long, 15½ miles west of Covington;

For the grading of a temporary Railroad track over the above tunnel;

For the grading of about one-half mile and completion of the grading of one mile of Railroad, at and near Covington;

And for the cross-ties required for twenty-five miles of Railroad track and sidings, between Covington and the White Sulphur Springs.

The Specifications and plans of the work, and the form of contract, which states fully the terms and conditions upon which the above work will be let, may be had and seen at this office, on and after the 12th of September next.

The right is reserved to accept such proposals as will best secure the faithful construction and completion of the work, according to contract, and to reject any or all that are not satisfactory.

No transfer of the allotment of any work will be allowed.

Persons proposing for work, who may be unknown to the undersigned, are expected to present satisfactory references.

By order of the Board of Public Works.
3135 CHARLES B. FISK, Chief Engineer.

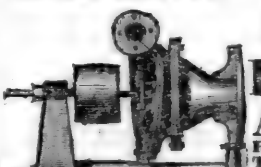
LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.			SHEET No		
1.	General Table for all Bases and all Slopes.		13.	for Base 18 ft. Slop.	1½ to 1
2.	For Side Hill Cuts and Fills.		14.	" 20 "	1½ to 1
3.	Base 12 ft. Slopes	1½ to 1	15.	" 24 "	¼ to 1
4.	" 14 "	1½ to 1	16.	" 24 "	1½ to 1
5.	" 15 "	¼ to 1	17.	" 25 "	1½ to 1
6.	" 15 "	1 to 1	18.	" 26 "	1½ to 1
7.	" 15 "	1½ to 1	19.	" 28 "	¼ to 1
8.	" 16 "	¼ to 1	20.	" 30 "	1 to 1
9	" 16 "	1 to 1	21.	" 30 "	1½ to 1
10.	" 18 "	¼ to 1	22.	" 30 "	1½ to 1
11.	" 18 "	½ to 1	23.	" 32 "	1 to 1
12.	" 18 "	1 to 1	24.	" 32 "	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c. each;** or the whole, handsomely bound in cloth, in one volume, for **$7.50.**



ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT
Centrifugal PUMPS

ARE the best and cheapest Pumps made for **RAILROAD STATIONS, MINES, FACTORIES, TANNERIES, PLANTATIONS, DRAINAGE, IRRIGATION, WRECKING,** and general use.

Made entirely of metal, without working valves or rubbing surfaces, they pass sand, fine ore and gravel, without injury. Capacity from 20 Galls. to 1,000 Bbls. per minute.

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER
CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$1.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

California Central Railroad.

Below we give the recent exhibit of this company, which is engaged in constructing a very important work. The people of this State are beginning to move with vigor in the construction of public works. Not many years will elapse before they will penetrate any accessible portion of the State. The greater portion of it is admirably adapted to this construction. The only road yet opened is doing a good business, and shows what may be expected from other well located lines. The following is the statement referred to:

The California Central Railroad Company was organized under the General Railroad Laws of the State, on the 27th of April, 1857, for the purpose of constructing a railroad from a junction with the Sacramento Valley Railroad, at Folsom, to the City of Marysville, on Feather River, a distance of about 44 miles. By the articles of association the Share Capital of the company was fixed at $1,200,000, and it was also authorized to issue bonds to the same amount.

ROUTE OF THE ROAD, AND ITS PROBABLE BUSINESS.

The route of the road extends from the town of Folsom to the City of Marysville, skirting for its whole length what are called the *foot hills* of the Sierra Nevada mountains. These mountains are traversed by rapid streams, along which are the only routes praticable for wagon-roads into them, in the narrow valleys of which are located the mines, and the great bulk of the population of the State. The route of the road approaches as near as practicable to the foot-hills, and, at short distances from each other, crosses the great roads to the mines. It is thus in position to secure all the business and travel going to and from them, and can, from its position, have no competing work. The accompanying map will show the relation of the road to the mines.

The road when completed, will do the business of the counties of Placer, Nevada, Yuba, Butte, Sierra, Plumas, Tehama, Shasta and Siskiyou, containing at the present time, a population of at least 200,000 souls. It will form a part of the route to the newly discovered Silver Mines in Carson Valley, which is now the seat of a large population, and between which and the cities of San Francisco and Sacramento, an immense commence has already sprung up. From Marysville to Oroville, a distance of 25 miles, a railroad is already in process of construction by another company, which will be an important feeder to the Central Road. The people of the State are taking active measures for the construction of that portion of a great overland railroad, lying within their territory. This road is to commence at San Francisco, and, sweeping around the head of the Bay, is to be extended to Folsom, by way of San Jose, Stockton, and other important towns. To cross the mountains, it is necessary to follow up the waters of the Feather River. The construction of the proposed road from San Francisco to Folsom is not at all necessary to the success of the California Central Railroad, and is only referred to, to show that the latter will form a part of the great line through the State, when it is constructed.

At the present time, the only railroad in the State is the Sacramento Valley, extending from the city of Sacramento, the head of navigation for large boats, to the town of Folsom, a distance of 22 miles. Although the people of California have been too much occupied about more pressing matters, to be able to give much attention to the construction of railroads, there is no State in the Union in which they are more needed, nor in which they would be so productive, for several reasons: 1st—notwithstanding the great extent of the State, the bulk of the population is concentrated within a comparatively small area; 2d—this population is more productively employed than that in any other portion of the United States; 3d—it draws its entire support from a distance, and must use the California Central Railroad for this purpose; 4th—the rates of railroad charges in California are four times greater than in the Eastern States; 5th—owing to the absence of frost and snow, and to the prevalance of the dry seasons, the cost of maintaining railroads is much less than in other States; and 6th—the railroads of the State must, for a very long time to come, enjoy a complete monopoly of the business of their routes.

The Sacramento Valley Railroad, which is to be considered as a portion of the California Central line, may be taken as a good illustration of the facts stated. This road is only 22 miles long. It has very little local traffic. Running at right angles to the mining districts it touches but one important point, and accommodates but a portion of one county—Eldorado, containing a population of about 40,000 souls. Yet, with its short line and with the limited area from which it draws its trade, its earnings already equal those of the first class roads of the Eastern States, as will be seen by the following statement, covering the whole period since its opening:

	1856.	1857.	1858.	1859.
Earnings ..	$173,433	$178,186	$190,436	$270 293
Expenses ..	87.483	87,463	80,8?5	126,506
Net...	$85,950	$80,623	$108,551	$143,787

The shortness of the line is a great drawback as business converging only at one point passes over it. The teams upon the mountains, lying only a few miles north or south of the eastern terminus, find it more convenient and cheaper to proceed direct to Sacramento than go out of this course, and break bulk at Folsom. A Railroad crossing these routes, would, every few miles touch points equally as important as Folsom, and from which an equal traffic would be secured. It has been ascertained by actual count that, on an average, 186 tons of freight leave the city of Sacramento, daily, for the counties of Placer and Nevada alone. When it is considered that nothing is produced in the mountains, and that the entire support of the miners is drawn from Sacramento, this statement will not appear extravagant to any one. There is an equally active movement of persons. It is well known that the miners, most of whom have no local ties, are constantly on the move. The whole population of the district accommodated would pass over the Road many times each year. The

passenger traffic on the Sacramento Valley Railroad the past year was equal to 59,416 persons. Based upon these facts, the following is an estimate of the annual earnings of the Road as soon as it is finished :—

50,000 through passengers, $3 50.....	$175,000 00
50,000 way passengers, chiefly between Lincoln and Folsom, ... $2 00,	100,000 00
46,000 tons through freight, $4 00,...	184,000 00
60,000 tons way freight, chiefly between Lincoln and Folsom, $2 00,	120,000 00
Mails and express matter,.....	15,000 00
Total earnings,.....	$594,000 00
Expenses in operating and maintaining Road, 40per cent.,.....	237,608 00
Net earnings,.....	$356,400 00

The Sacramento Valley Railroad earned last year $143,700, net, which is at the rate of about $7,000 per mile. The gross earnings of the California Central Railroad are estimated at only one-half greater. It must certainly accommodate five times the population. Its length of line is fully twice as great. The Sacramento Valley Railroad does not touch a single important town, while the Central Railroad will do the entire business of all the important towns in the Northern portion of the State. The city of Marysville is the third town in importance in the State, and commands the trade of a very extensive country. The conclusion is irresistible that the annual earnings will at least equal the above estimate. In addition to the traffic of the mining districts, there are now manufactured near the line of the proposed Road, at least 100,000,000 feet of lumber annually, a very large portion of which is sent down to Sacramento by wagons on their return from the mines. A large portion of this lumber, which goes to Sacramento, will take the Railroad; this lies on the out edge of the wooded district of the State, and will have an immense trade in wood for fuel, as well as in all kinds of lumber. The Road, too, traverses a very excellent agricultural section, being a portion of the great valley of the State lying between the Sierra Nevada and the coast range. Every condition exists, consequently, for a first class work in regard to the traffic;—an abundant population, engaged in the most profitable of all pursuits, and who will draw their entire means of support over it; a large and profitable local business; high rates of charges; a climate admirably adapted to the cheap working and maintenance of the Road; an entire freedom from competition;—of all which a sufficient illustration is furnished by the Sacramento Valley Railroad.

PROGRESS AND CONDITION OF THE WORK OF CONSTRUCTION.

The construction of the Road was commenced in 1858. At the present time the graduation of the entire line is nearly completed—a further expenditure of $20,000 being ample for this purpose. The whole is in such a state of forwardness that, with ample means provided, it could be completed sooner than the rails could be laid upon the track. All the more expensive and difficult structures have been constructed. The total amount of estimates allowed up to the present time, cannot be less than $1,400,000. All the rails necessary for the Road have been purchased, and are either upon the line on the Road or are being rapidly forwarded to it. An equipment, consisting of five locomotives with a supply of cars adequate to the immediate wants of the Road, have also been purchased and have been forwarded to the line of the Road.

FINANCIAL CONDITION OF THE COMPANY.

The amount expended in construction has been derived chiefly from assessments on the Share Capital of the Company. Of the whole amount of Bonds provided for, about $400,000 have been issued and sold. A portion of the balance are now offered for sale. They are a first mortgage of the Road, and its property and franchises, and bear 8 per cent. interest, payable in the city of New-York, 20 years after date. It is believed that no better security of the kind has been offered in this market. They have only to become known to take rank among those of the first class. To pay the accruing interest the Road has to earn less than $2,500 per mile, net, while those of the Sacramento Valley Railroad are nearly three times greater.

The Canal Revenues--Increase of Nearly $700,000!

Tolls received on all the Canals of this State in the fourth week in August, 1860,	$122,358 90
Do. in 1859.....	57,964 12
Increase in 1860.....	$64,394 78
Whole amount of tolls received in the month of August, 1860.....	$409,439 28
Do. in 1859.....	208,914 30
Increase in 1860.....	$200,524 98
Whole amount of tolls received from the opening of navigation to and including the fourth week in August, 1860.....	$1,563,896 42
Do. in 1859.....	895,165 19
Increase in 1860.....	$668,731 23

This presents an aggregate of $39,337 13 per week, and $157, 348 52 per month, since navigation opened. A like gain to the close of navigation would carry the increase to more than $1,-100,000; but this cannot be expected unless the tolls are raised on wheat, corn and flour to the rates of 1857, as they probably might have been, without any injury to the trade on the Canals.

While the carriers by rail and by water are putting up prices in accordance with the laws of commerce, we see no reason why the State should open its avenues of transit at cheaper rates than formerly.

This statement shows the tolls received on all the Canals of the State from the opening of navigation to the first of September during the ten years stated below, giving the increase and decrease of each year compared with 1860 :—

Tolls of 1860.	$1,563,896 42.	
1859.	895,163 00.	Increase in 1860 over $668,731
1858.	1,185,835 00.	" " 378,961
1857.	1,176 603 00.	" " 387,293
1856.	1,386,122 00.	" " 177,774
1855.	1,460,877 00.	" " 103,019
1854.	1,514,560 00.	" " 49,336
1853.	1,795,336 00.	Dec.in'60 comp'd with 261,440
1852.	1,737,038 00.	" " 173,142
1851.	1,938,247 00.	" " 374,351
1850.	1,662,800 00.	" " 96,904

The large Canal tonnage in 1853, with a rate of toll 100 per cent. on merchandise over present rates, and 33 per cent. on wheat and flour, would of course swell the receipts largely above any other since the reductions of 1852 and 1858. The increased shipments of the present year over former periods, since 1856, have no doubt contributed largely to our increased receipts; but it is believed that if the rates of 1857 had been restored on wheat and flour, and half a mill increase had been fixed on corn, the aggregate receipts at the present time would have reached those of 1853.

Of the whole amount of tolls received up to this time, $1,048,581 were taken at the three tide-water offices, and at Buffalo and Oswego. Of the whole increase the present season ($668,731) there was taken at the three tide-water offices and at Buffalo $526,154 of it. The gross tolls the present fiscal year will amount to about $2,400,000, against $1 814,362 in 1859. Gain in 1860, $585,-638.

The "Surplus Revenue" applicable to the payment of the principal and interest of the stock debt of 1846, it is estimated, will be very near $1,600,000 against $962,000 67 last year; showing an increase during the year of about $638,-000.

While no portion of this surplus can be applied to any other object of State indebtedness than the Canal Stock Debt of 1846, the people will rejoice to learn that another million of that debt will be paid off next January by Canal Tolls, and that they may confidently look to a speedy removal of that mortgage from their farms and the trade of the State.

We remark that the increase of "surplus" over the increase in the gross tolls for the fiscal year, is owing to the reduction in the expense of repairs and collection during the present fiscal year, compared with 1859.—*Albany Evening Journal.*

Muscogee Railroad.

The gross earnings of this road for the fiscal year ending July 31, 1860, were $232,218 93, and the expences for the sam time were $131,832 05, leaving a net profit of $100,386 88, or about 16 per cent. on the capital stock.

The financial condition of this company has never been as good as it is now, and the future looks flattering for an increase of business over this line. A dividend of $4 per share, payable on demand, was declared, and $45,000 appropriated to buy some of their bonds maturing in '62, only $7,500 of them could be obtained, and the remainder of the appropriation was invested at 7 per cent.—*Savannah Republic.*

Alabama and Florida (Ala.) Railroad.

At the commencement of the fiscal year ending 30th June, 1860, the Alabama and Florida Railroad was open to Greenville, 43 miles south from Montgomery, and since the 15th February it has been operated to Bolling, a station 9 miles further south. The average length of road operated during the year has, therefore, been about 46 miles.

The receipts for the year have been—

From passengers	$42,936 69
" freight	46,340 57
" mails.....	11,825 00
Making a total of.....	$101,102 26
The current expenses have been	63,235 67
Showing a net income of.....	$37,866 69

The quantity of cotton transported over the road during the year has amounted to 25,635 bales.

The net income of the road has been passed to the credit of interest account, leaving now to the debt of that account $63,183 21, which is the balance of interest over and above the net income of the road, paid out on loans of every description from the organization of the company up to the 1st of July, 1860. Last year the balance of this account amounted to $55,010 49, and the total outstanding debt of the company to $587,777 86. The debt of the company has been increased within the year to $937,751 86, by the sale of the Land Mortgage Bonds, and the interest account has been increased within the same time only $8,-172 72; showing that the receipts on the mileage of road in operation has paid all expenses of working and keeping up repairs, and come within $8,-172 72 of paying the interest on the entire amount of debt, of which not less than $300,000 has gone into unfinished road, and for iron and machinery not yet in use.

Within the year there has been sold of the Land Mortgage Bonds $353,500, and up to the present time, the entire amount of bonds put in market and sold, amouting to $803,500, have been sold at par. This high credit is a gratifying indication of the confidence of capitalists in the value of the work, and which is now so nearly completed.

On the first day of October last, offices were opened for the disposition of the lands granted by Congress to aid in building the road. Up to the 1st of July, the Register reports the sale of 8,984

acres, for the aggregate sum of $29,250 06 of this sum $8,496 89 has been paid in cash, and $20,728 54 in notes bearing interest. In compliance with the conditions of the mortgage, the sum paid in cash has been applied, first to the payment of the expenses of the Land Department, and the remainder to the purchase of $6,500 of the convertible bonds due in 1863.

"In December last says the President, I closed an arrangement for the connection of the Mobile and Great Northern Railroad with your road within five miles of the Florida line, upon terms entirely satisfactory. No discrimination is to be made by either company in its rates of freight or passage against the other, and every effort is to be made by both to work their roads in close connection and with dispatch. I have suggested to the President of the Alabama and Florida Railroad, of Florida, to consider the propriety of arranging with this company to work his trains up to the same place, so that the point of junction with both the Mobile and Great Northern, and the Alabama and Florida Railroad, of Florida, being the same, it will greatly promote the convenience of passengers, and afford increased facilities for the arrangement and transfer of freight.

At your last annual meeting, the road to Greenville was in operation, and I felt confident we should have by this time very nearly, if not quite, one hundred miles completed, where as we have only about sixty-two miles now in use, which is continuous from Montgomery south.

In answer to the enquiry which very naturally comes from you to the Board of Directors, why is it that with ample means you have fallen so very far short of what you expected to accomplish within the year that is past? The Board had every reason to believe that the Florida Company would complete their road up to the State line by the 1st of April, 1860, and ordered all the iron for the road south of the 65 mile station to be landed in Pensacola, and the 50 miles from the Florida line up to the 65 mile station, to be laid down from that end of the road. I at once made the necessary arrangements to carry out these views, by contracting with Messrs. JOHN FRASER & Co., of Charleston, for 2,000 tons of iron—1,200 tons of which were landed in Charleston, and has been used in completing the road down to the 62 mile station—the other 800 tons was landed in Pensacola in December.

I purchased in Philadelphia 1,200 tons, to be delivered in June and July, of which 400 tons have arrived in Pensacola, 200 tons are on the way, and the other 600 tons will be put on the way as soon as I order their shipment. I very willingly gave an extension of time on the contract, after I found we could not begin to lay it down as soon as I expected.

I also closed a contract in April with the Messrs. PEABODY & Co., of London, for 2,000 tons, which is all that will be required to complete the road. This iron is to be delivered in October, November and December; and as I am advised that the Florida Road will be completed up to the State line by the 20th inst., I hope nothing will interfere to prevent the rapid progress of the work. Everything has been provided on our part—we have now 1,200 tons of iron in Pensacola, and contracts for the delivery of all that is required to complete the road as rapidly as it will be needed. Two first class locomotives and train of freight cars are at Pensacola ready to be put in service on the southern end of the road."

On the 1st July the road was finished to Pittstown, and opened for public use on the 4th July. The year 1860-61 therefore commences with a road 60 miles in length. It will be extended to Garland, 65 miles south of Montgomery by the 1st September at latest. This is as far as it is contemplated to work southwardly.

On the completion of the track to Garland, the force engaged in track-laying will be joined to that now closing up the work in Florida, and will be ample to lay 8 miles per month as the road-bed is prepared for the track and the bridges finished. By the 1st December the extension of the track from the Florida line to Sparta will be completed, and the whole road by the 1st April, 1861.

BALANCE SHEET, JULY 1, 1860.

LIABILITIES.

Share capital paid in		$577,952 70
Convertible bonds due 1863, guaranteed by Directors		150,000 00
Mortgage bonds guaranteed by M. & W. P. and A. La. G. R. R. Cos., due in 1867		300,000 00
Land mort. b'ds due 1869	$550,000	
Do. do. on hand.	196,500	
		353,500 00
Bills and notes payable		105,255 23
Open accounts		28,996 63

Officers of the company 1860-61:

CHARLES T. POLLARD, *President.*

SAMUEL G. JONES, *Chief Engineer & Sup't.*

J. E. BAKER, *Treasurer and Secretary.*

Principal Office, Montgomery, Montgomery Co., Ala.

Early History of New-England Railroads.

We had intended to have published at the time it appeared the following article from the *Boston Journal*, relative to the early history of railroad enterprises in New-England, but being laid aside it for some time escaped attention. We now give the article entire for the purpose of preserving a record of the early history of the railroads of the country.

A few evenings since, some of the early friends of the Boston and Worcester Railroad met the Directors of that road, by personal invitation, at a little supper party at the United States Hotel. Among the number were Hon. Nathan Hale, first President of the company, Hon. Geo. Morey, its first Treasurer, and Hon. Mr. Buckingham. Mr. Twichell, the President of the Company, presided, Remarks were made by the President, Mr. Hale, Mr. Morey, Mr. Buckingham, Geo. B. Blake, Esq., Josiah Stickney, Esq., Ex-Gov. Wells of Maine, and others, recalling, among other things, the early history of the enterprise.

In response to a call from the President, who alluded to the part which Mr. Washburn, one of the Directors, had taken in the inauguration of the system of railways in New-England, Mr. W. stated that his first connection with the scheme was in June, 1826, when, as a member of the House of Representatives, he was placed upon a committee which was raised, upon the motion of Dr. Abner Phelps, then a member from Boston, to consider the practicability and expediency of constructing a railway from Boston to the line of New York, in view of its extension to the Hudson River. The other member of the committee was Geo. W. Adams, Esq., son of President Adams then a member from Boston.

The first meeting of the committee was upon the 26th of Sept., 1826. one reason for the delay having been the difficulty of finding any accredited treatise upon the subject of railroads, and a desire to obtain the work of Mr. Strickland, then recently published, which was received here about that time.

The committee addressed circulars to the various towns along the route, to ascertain the probable business wants of the community, and the result of their inquiries and examination was a report in favor of such an enterprise, dated Jan. 19, 1827.

They found, as might have been expected, that the public, having never made any inquiries upon the subject, were wholly indifferent in respect to it, and that something must be done to arouse attention to it. For that purpose Mr. W. prepared a series of articles over the signature of "Agricola," which were published in the Worcester *Ægis*, in November, 1826, and being upon a subject novel and interesting, whose author was unknown, they were copied into several other papers, and pretty generally read, and are believed to be the first writing upon the subject in Massachusetts.

It was obvious that the first thing to do to carry forward any such measure, was to enlighten the public mind upon it, and this was undertaken by able and efficient hands. In Jan., 1827, Mr. Hale began and published in the *Advertiser* a series of articles upon the *practicability and expediency of a railroad from Boston to Connecticut river*, which contained a large amount of valuable information, and did much to inform the public mind and arouse public attention to the object. This was followed by an able pamphlet from the pen of Hon. Theodore Sedgwick, under the signature of "*Berkshire*," in 1828: and the value of the efforts of these gentlemen, especially the former in the cause, could not be over estimated.

The report of the committee met with the fate which might have been expected, in the then present state of knowledge upon the subject. It was made the butt of wit and ridicule during the whole session. The idea of a railroad across the hills in Worcester and Berkshire was too extravagant to deserve anything but to be laughed at. And, time and again during the session, the member from Lanesboro' and one of the members from Pittsfield amused themselves, during debates in the House, by gravely inquiring of the member from Leicester among other things, if he had had any despatches from the moon by the way of his railroad yet.

The committee, however, insisted that the project was a question of time only, and they were content to let time settle it—as it has since done. The measure then inaugurated did not rest until its final and successful accomplishment.

In justice to all, it should be borne in mind that the subject was then not only a new one here, it was hardly less so in England. The Stockton and Darlington Railroad had been opened in September, 1825, and a locomotive engine had been placed upon it, which, in one part of its experimental trip, traversed 8¾ miles in 65 minutes, and in another part, 12 miles in 3 hours and 7 minutes. But when, they concluded to run a passenger car upon the road, it was drawn by horse power.

Fortunately the State had in Gov. Lincoln an able and consistent friend of internal improvement and internal commerce.

In 1827, a Board of Commissioners, consisting of Judge Mitchell and Col. McKay, was appointed to survey routes for a railway from Boston to Albany. They made a report in January, 1828.

This was soon followed by the creation of a Board of Internal Improvement, in 1828, to carry forward measures to open a communication for the trade and business of Boston, which was obviously in danger of being diverted into other channels, and lost to that city.

The only kind of locomotive power then contemplated to be used upon railways, was that of

horses. It had been gravely stated by civil engineers, and adopted as a dogma in mechanics, that an engine driven by steam power could not ascend a higher grade than 27½ feet to the mile.

It was not until October, 1829, when Mr. Stephenson's engine, the "Rocket," was tested and found able to run thirty-five miles in an hour, upon the Liverpool and Manchester Railroad, that the experiment of using steam power could be considered a success.

The importance of opening a communication with the interior, was now becoming every day more pressing. A company was incorporated, in 1829, to build a railroad to Lowell.

In June, 1831, an act of incorporation was granted, upon the petition of George Bond and others, to a company to construct a railroad from Boston to Worcester; but the scheme seemed to be so problematical, its profitableness, if it was built, so doubtful, that a subscription for a sufficient number of shares in such stock to inaugurate the enterprise, was obtained with great difficulty.

The company was organized in July, 1831, by the choice of Nathan Hale President, David Henshaw, George Bond, Thomas Motley, Daniel Denny, Joshua Clapp and Henry Williams, Directors—names which ought ever to be remembered with honor by this community, as the active pioneers in this enterprise.

Their first effort was to ascertain the cost, the amount of business, and the reasonable profits of the road if constructed; and, in Jan., 1832, they made a report on those subjects, which Mr. W., begged permission to read, in order to contrast them with the present condition of the road.

The whole number of passengers between Boston and Worcester, including those going and coming through that town, they estimated at 54,000 a year. The number of tons freight per year, 30,000; giving a return for passengers $67,500, and $75,000 for freight, or a total of $142,500, with a possible increase of 50 per cent. at some future day.

The cost of the road was estimated at $883,904. But to cover contingencies, they called it $1,000,000, while they supposed $34,148 per year would cover repairs, so as to leave a net income of $108,352.

By the effort of these directors, and their immediate co-workers, among whom was Mr. Morey, the measure went on, and in Jan., 1852, the Directors of the Worcester road petitioned for an act of incorporation for the Western road, to extend the anticipated communication to Albany.

In April, 1834, the first engine ran over a part of the road, and July 6, 1835, the road was opened through to Worcester.

And now, he asked, what are the actual results of the road at the end of twenty-seven years, compared with the most sanguine hopes of its friends? The road, instead of costing $1,000,000, had cost $4,689,090. The number of passengers, instead of 54,000, was 1,603,000. The freight, instead of $142,500, was $1,050,000. The income from the business to and from Worcester alone, in 1859, was within a fraction of $72,000; while the net earnings of the road, intead of being $108,352, have been $498,000.

It has been hardly possible to keep pace with the growing wants which the very facility supplied by those roads has created. Nobody knew or presumed to anticipate their stupendous importance, or even what would be required to work them. The famous "Rocket" of 1829 was a *four ton* engine, and ran for eight years on the great thoroughfare between Liverpool and Manchester—in singular contrast with engines six times that weight now running over the mountains between Boston and Albany.

Everything seems to have keep pace with this growth of business along those railroads. The stock of the Western road, when it asked for aid of the State in 1838, was not supposed by its most ardent friends, would ever be more than a four per cent. investment. It was now paying a dividend of eight per cent. and was selling at six per cent. advance in the market.

Boston of 1838 had grown from 61,000 to almost 172,000 in 1855. Worcester in 1830 had its 4,000, now it had nearly six times that number. The whole Commonwealth had shown the influence of this system in its trade, its population, its wealth and its general prosperity.

But their influence upon the moral and social condition of the Commonwealth was scarcely less marked than upon her business. It was but another illustration of effect of opening a free and easy avenue for trade and commerce. History tells us how Venice was luxuriating in all that art and luxury minister to a city, while through Germany and France, now but a few days journey distant, the rudeness of barbarism still prevailed, for the simple reason that there were no means of easy intercourse between them.

The railroads of Massachusetts have wrought an entire change in the relations between the people of its different sections. Berkshire, before 1830, had little in common with Boston. Its trade, its opinions, its politics and its interests had far more to do with New York than with the eastern half of the Commonwealth. Every region had its own public sentiment, and Boston dared not pronounce what the people wanted, as a measure of prudence or policy, until the "River Gods" had been heard from. Now, everything tends to centralization. Boston has become the focal point, the great exchange, where even local opinions as well as general politics are discussed and regulated. The railroads have set the whole community in motion, and that system whose humble origin he had been tracing, was now felt in every interest and every section of New England.

Sandusky, Dayton and Cincinnati Railroad.

The earnings of this road for the current year, have been as follows:

From freight	$283,944 44
" passengers	125,190 65
" mail	16,074 00
" express and extra baggage	12,296 61
" storage	2,159 92
	$139,655 62

EXPENSES.

Machine shop	$3,810 37	
Maintenance of way	106,777 77	
Locomotive power	87,745 06	
Train expenses	44,202 47	
Station expenses	54,454 87	
Office expenses	30,084 33	
General expenses	6,491 83	
		333,566 70
Net earnings		$106,098 92

Compared with the last fiscal year, these figures show the following changes:

Diminution of gross receipts	$138,292 96
Reduction of net earnings	119,783 65
Saving in expenses	$18,509 31

The decrease in the net earnings is attributed to the partial failure of the crops in Ohio in 1859; to the opening of a new railroad route from Dayton to Toledo during the last fall, causing a diversion of business; to the late opening of the lake navigation at Sandusky, this year—the 23d of April, against the 2d of March in 1859; and to the general ruinous competition for through business from East to West, which has prevailed during the past, and seems likely to continue for several years to come.

A plan has been suggested for the re-organization of the company, which may be summed up in the following synopsis:

The present plan of the committee is to capitalize the bonds and debts on the basis of $2,000,000 for the whole property of the corporation. The Sandusky City and Indiana Railroad bonds ($350,000) to be put in at par, the Springfield and Columbus bonds ($150,000) at 40 per cent., and the second mortgage bonds ($1,000,000) at 80 per cent.—the whole forming a first class preferred stock. The third mortgage bonds ($1,000,000) to be put in at 40—making a second class preferred, and $3,647,090 of Sandusky City and Indiana Railroad stock. Mad River stock, 6 per cent. bonds, and unsettled claims, to be put in at 10 per cent., to form a common stock. The corporation would then stand—$1,210,000 of first class preferred stock, $400,000 of second class do., and $364,709 of common stock, with a reserve of $25,291 for contingencies. Before the second class could receive full dividends, and the common stock any dividends at all, it would be necessary to pay off a floating debt of $176,581, consisting mainly of over-due bonds. The remaining floating debt—some $240,000—is said to consist principally of weak claims, for which the committee have felt authorized only to offer terms which have not been accepted.

When the report of the company just made is received, we shall give further extracts.

Journal of Railroad Law.

GENERAL RAILROAD LAW AS TO MAINTAINING FENCES; LIABILITY OF COMPANIES FOR NOT ERECTING; DEFENCE OF COVENANT FOR PLAINTIFF TO ERECT THE SAME AND TO KEEP IN REPAIR.

We give, this week, the case of Duffy *vs.* the New York and Harlem Railroad Company. The principal point in the case to which we would draw attention, is involved in the defence. The action was brought to recover the value of a horse belonging to the plaintiff and which was run over and killed by the engine or car of the defendant on their railroad track at Fordham in Westchester County. It appeared that the plaintiff hired pasture for the horse upon a lot belonging to a Mrs. Bassford, and adjoining the strip of land on which the defendant's track was laid; that the horse was turned into this pasture lot on the morning of September 3, 1857, and the partition fence between the lot and the rail-track being insufficient and defective, the horse strayed through it, and on the track of the defendants, and was thus killed. One of the grounds of defence was that the plaintiff was himself negligent in putting the horse into the lot referred to, while in a defective condition; but a second defence was put in to the effect that Mrs. Bassford, in a deed given by her to the defendants covenanted for herself, her heirs, executors and administrators to erect upon the easterly and westerly lines of said strip, good, lawful and sufficient fences to inclose the same and at her own cost and charge, maintain and keep the same in good repair for the term of eighteen years, or until the expiration of the defendant's charter; and that as the plaintiff derived his right to keep his cattle in the lot through Mrs. Bassford, he was subject in his right to the same conditions under which Mrs. Bassford held the same, and could not claim exemption from any of the responsibility to which she would be subject were she herself plaintiff in the suit.

The case came up on appeal to the General Term of the Court of Common Pleas for the City and County of New York. The following is the opinion of the Court.

HILTON, J. In Corwin *vs.* the New York and Erie Railroad Company, it was determined that the general duty of erecting and maintaining fences on the sides of railroads is now imposed by section 44 of the General Railroad Act of 1850, upon all railroad corporations, and until compliance on their part, they and their agents are liable for all damages which shall be done by their agents

or engines to cattle, horses or other animals thereon. That this duty was imposed, not only for the benefit and security of the public, but also for the benefit of the owners of cattle generally; and until such fences are erected, the statute excludes any defence of negligence on the part of an owner of cattle killed upon the track, in an action brought by such owner against the corporation to recover damages for the injury resulting from such killing. And it is entirely immaterial whether such cattle enter lawfully or unlawfully upon the premises adjoining the railroad, and stray from thence upon the track, provided it appears that the corporation have not erected and maintained the fences required by the statute; although after the fences have been erected, there can be no recovery in such a case where the negligence or misconduct of the owner of the cattle injured, contributed to the injury; or, in other words, the common law doctrine in respect to actions on the case for negligence, then prevails.

It may also be noticed, that in the case cited the plaintiff's cattle strayed upon the land of one Gregory, and from thence upon the track of the defendants; and as it appeared that Gregory, like Bassford in the present case, had conveyed the strip of land for the railroad track, and in the conveyance had covenanted to erect and maintain forever all necessary fences on each side of the railway, it was insisted that the plaintiff was bound by the covenant. But the court held that as the plaintiff there was a stranger to the covenant, he could not be bound by it; adding, however, that if "Gregory's cattle had entered upon the road from his land, by reason of there being no fence, and been injured, his covenant would have been a good answer to the action." Or, in other words, he would be estopped from recovering any damages resulting from non-performance by him of his express covenant; and although the duty had been imposed by the statute upon the corporation, yet he undertook to perform it, and as his performance of the covenant entered into by him, would have satisfied the statute, he would not be permitted to recover for any injury resulting to himself and arising from his non-performance. Thus, in the present case, had the horse in question belonged to Bassford, it is quite clear he would not be entitled to recover in an action like this; and the question, therefore, to be determined by us, is whether the plaintiff stands in any different position, with respect to an injury of this character than his landlord.

It has long been settled law that a covenant to maintain partition fences between lands granted and other land of the grantor, runs with the and, and binds or effects all persons claiming or occupying under the party making the covenant. In the language of Charles J. Wilmot, "covenants which run and rest with the land lie for or against assignees at the common law, though not named. They stick so fast to the thing on which they wait, that they follow every particle of it,"—and therefore it is that, although a party may have a mere occupation of the land for a particular purpose, and which may be said to be a species of a title, though of a very low order, yet it is in subordination to, and affected by, the covenant of the landlord. And though he may not be bound to perform the covenant, as heir or assignee, yet it will operate as an estoppel against him in all cases in which the landlord would be estopped by reason of it.

In Spencer's case a distinction was taken between a covenant to erect a wall upon the demised premises, and in which the assigns of the lessee were not named and a covenant to maintain a wall already erected; and it was held that the assignee in that case, (which was of the class first named), was not bound, because the thing in respect to which the covenant was made, was not in *esse*, and had not at the time of making the covenant become part of the land. It was not contemplated; although it was agreed by the judges that because it was a thing which would directly affect the demised premises if the word assigns had been used, the covenant would have bound the assignee, but it could not be extended to him without his being named in it, as the subject matter of it did not relate to the thing in existence at the time of the demise. Gray *vs.* Cuthbertson. But this nice distinction originating at a time when it was necessary to use the word "heirs" or other words of inheritance in a conveyance in order to grant or convey an estate in fee, cannot be now said to exist, as in Norman *vs.* Wells, it was determined that those covenants run with the land, which are made touching or concerning it, and affect its value, and are not confined to those which relate to some physical act or omission upon it.

It is unnecessary, however, to pursue this subject, as it will not be pretended that the estoppel, which arises in this case, grows out of the plaintiff's liability to perform the covenant of Bassford. It is sufficient that his occupation was under Bassford and in subordination to covenants contained in a deed duly recorded long previous to his entering upon the premises. He could require no greater rights, in respect to their occupation, than his landlord had to confer, and he is estopped, in an action of this nature, to the same extent as Bassford would have been had he been plaintiff. The covenant was one that runs with the land and not only affected every particle of it, but every occupation was subject to it, even though the occupant was under no obligation to perform it. Judgment reversed.

Punjaub (India) Railway.

It will doubtless be of interest to our readers to learn how our railway progresses. European as well as native are no doubt anxiously watching the advancement of railroads in India, and the residents of the Punjaub have a peculiar interest in the line now under construction in this province, and which is to pass through the capital. This being the case, we proceed to state that the works from Lahore to Umritsur are in such a state of forwardness, that if materials arrive from England as expected, a locomotive will be running over the line *this year*. In last December the railway department started the earthworks between Lahore and Sher Shah, twelve miles on the other side of Mooltan. These works run through a district where there was every reason to dread want of labor, but we are glad to state that at this moment two-thirds of the whole is completed. The Lahore passenger train station is being proceeded with in a highly satisfactory manner, and the Umritsur station will be commenced with whenever the Government sanction to the work is received. Stations moreover at Meean Meer and Attaree (between Lahore and Umritsur) are being erected, and in short every effort is being made to complete the portion of the line to Umritsur as quickly as possible. Rails have been laid down on twenty-nine miles alongside of the line, ready for putting down, and the rest which will be required are on their way up from Kurrachee. Twelve English platelayers are on their way out to assist in the work. This rapid progress, this great success, is doubtless attributable to the assistance rendered to the engineers by all officials, from the Lieut. Governor to the Assistant-Commissioner, and to the cordiality which has uniformly subsisted between the services. But even this would have availed us nothing if we had not Mr. Brunton with his science, his perseverance, his patience, and his energy, to the force.—*Lahore Chronicle.*

Nashville and Northwestern Railroad.

The Hickman *Courier* states that the cars on the Nashville and Northwestern Railroad are now running to a point eight miles from Dresden, and that they will be running to that place by the 1st of November. On this end of the road the cars are running some twelve or fifteen miles, and eight or ten miles additional is ready to receive the iron. It is expected that within a year the whole road will be completed and the cars running through. This road is aiming direct for Cairo, and when completed will bring St. Louis in direct connection with Chattanooga.

Frauds by Conductors of Railroads.

The Pennsylvania Railroad Company has just detected a series of frauds practised upon it by conductors in its road of which we give the following account.

"The Vice-President, Mr. Scott, had ascertained that one conductor had purchased a property in Philadelphia, for which he paid $12,000 cash. He had no means when he went into the road a a year or two previous. Another conductor was paying $800 rent, while his salary was but $750. These and other men who were living beyond their income were watched, but nothing wrong could be detected. It was clear, however, that a large amount of the cash collections were being withheld daily, and it is stated that as much as 60 per cent. of the amount collected by certain conductors was retained. As the money did not come in fast enough under this system, a combination was formed between some ten or twelve conductors and some half-dozen ticket agents or sellers on the Pennsylvania Central who were in league, it is believed, with similar employees on other roads, direct connections of the Pennsylvania Central, by which a certain amount of tickets taken up daily should not be punched, as required, but should be returned to the ticket agents to be re-sold.

Numerous plans and traps were devised and set to detect the guilty ones, but up to last week all had been a failure. Men were at last employed who purchased tickets in Cincinnati and Columbus for Philadelphia; these tickets were privately marked; and the day they were used, as well as the name of the conductor, were reported to headquarters. It was found in several instances that these tickets, although used, were not reported for ten days, and were, of course, re-sold. A certain party in Pittsburg applied to the ticket agent in that city, a week ago, to know, if he would sell the Pittsburg and Philadelphia portion through Cincinnati coupons. This led the ticket agent to suspect something wrong; and before giving any answer he reported the matter to head quarters. He was then instructed to say to the party applying to have tickets sold, that if he would bring local tickets, he would sell them for him, but that he could not sell the coupons. The result was that local tickets were bought, and thus the robbery was detected. Several suspected parties were then questioned, as to their complicity in the matter, some of whom plead guilty and returned their ill-gotten property, while guilt was fastened upon others."

There is no doubt that a large number of companies are heavy losers in similar ways. They can be said to have hardly any security, but the honesty of the conductors. All these have abundant opportunities in which detection is almost a

matter of impossibility. A great point would be gained if a method could be devised by which no money should come into the hands of conductors. In England and we presume on the continent, no person can get into a car, without a ticket. The same rule should prevail with us.

The Legislatures of the States could do something by adding the severest penalties to embezzlements by employees on railroads.

Illinois Central Railroad.

We copy the following letter from the executive committee of the directors of this company to its several agents:

OFFICE OF THE ILLINOIS CENTRAL R. R. Co., *New-York August 7*, 1860.

GENTLEMEN: The advices from the Southern States of the injuries to the corn crop, equivalent to a total failure in several States, have directed our attention for a week or two past to the sources of supply for the South during the coming winter. Illinois, Indiana and Ohio will undoubtedly have an active demand for their great supplies of corn. The supply of wheat in the Southwestern States is not more than adequate for the home demand, and large shipments of flour are already going forward to New-Orleans. This domestic demand for grain, united to the probabilities of large sales for export to England, seems to promise for Illinois during the next twelve months a ready sale for the larger supplies of wheat just harvested, as well as for the corn crop, which is this year in a very forward state, and promises to give a larger yield to the acre, and on a greater breadth, than any ever before gathered.

It is now three years since Illinois has been thus favored. The great immigration to that State, which in ten years has swollen the population from 850,000 to 1,800,000 persons, took place in 1854, 1855, 1856. It is safe to assert that three fourths of the population of Illinois are directly employed in the cultivation of the soil; hence the estimates of the products of this harvest do not seem exaggerated. It is judged by competent authority that from the harvest of 1860, 50,000,000 bushels of grain will be sent out of Chicago alone. The highest point reached thus far was 21,583,221 bushels in 1856. The shipments declined last year, under a light harvest to 16,633,795 bushels. To the first of August this year upward of 15,000 000 bushels of grain have been received at Chicago. Of wheat alone there will probably be delivered 100,000 bushels daily at Chicago for the next ninety days, and 600,000 barrels of flour, and from 1,500,000 to 2,500,000 bushels of oats previous to the 31st of December. Of the old corn crop there is probably yet to be delivered from 2,000,000 to 3,000,000 bushels, and of the growing crop not less than 1,000,000 to 2,000,000 bushels will, without doubt, be delivered in November and December.

These large supplies of grain will carry the figures of exports from Chicago during 1860 beyond 30,000,000, or 50 per cent. beyond the large business of 1856. It seems important that the shareholders of our Company, who have had their hopes so long deferred, should know these general elements of prosperity which Illinois is this year enjoying in such large measure, which are already adding to the freight-traffic of the tide, and which must add greatly to the value of their land estate, and give additional security to the notes now held by the Company. The axiom that land always has a value relative to the population resident upon and working it is undoubtedly true, but the realization of our expectations has been retarded by the singular recurrence for three successive years of short harvests. During the last ten years 13 000,000 acres of Government land in the State of Illinois has been disposed of; there are now no public lands left unsold, and the price of wild, uncultivated prairie land has advanced during this period from $1 25a$10 per acre.

In 1850 the shipments of grain from Chicago were 1,330,088 bushels. In 1860 they will exceed 30,000,000 bushels, or twenty times the shipment of 1850. It is these considerations which are giving to the Illinois securities the recent advance in public estimation, and with a continuance of the foreign demand added to the domestic requirements for gain, it is probable that the railways will be taxed to the utmost capacity of their rolling stock during the ensuing six months. The increase of passenger traffic resulting from this prosperous state of affairs must be very great, inasmuch as very large numbers of people have been kept at home by dire necessity, owing to the want of means. With a change like that which we now have every reason to expect, we may rationally look for a large amount of additional travel.

Yours, respectfully, Signed,
THOMAS E. WALKER.
Chairman Executive Committee.

The Illinois Central Railroad seems likely to have an extraordinary turn of good fortune. From this time to the closing navigation, it will have all it can do in the direction of Chicago. After winter sets in, it must have an immense traffic in a Southern direction. There is a short crop of bread stuffs through all the Southern States, which must be made good from the Northwest. The same traffic that swells the receipts of the Company from earnings, gives the farmer the means of paying for his lands.—in this way securing to the company a double advantage. Its misfortunes came in a flood. A simular rule bids fair to hold in its good fortunes.

Hannibal and St. Joseph Railroad.

The construction of the branch of this road from Wyandotte to Kansas has been let to a company at $300,000, the contractors to furnish the iron, and to have the road in running order by the 1st of May next. The Leavenworth and Pawnee Railroad Company have purchased the Delaware Reserve, and will build their road from Cameron through Leavenworth into the Kansas Valley, a distance of some fifty or sixty miles.

New Iron Bridge.

A number of workmen are now engaged at Mt. Clare in the preparation of a new iron bridge, upon an improved principle, for the station known as the South Branch, 162 miles from Baltimore, on the line of the Baltimore and Ohio Railroad. This structure is composed exclusively of cast and wrought iron, consists of three spans, each of the length of 128 feet 9 inches, making an aggregate of 386 feet. This is the measurement from the centre of the cords, whilst its width, 11 feet, is ample for a single track. The structure which now occupies the place for which the new bridge is designed is partly of iron and wood. The trusses of the new work measure 11 feet. In the construction of these bridges it has always been deemed necessary before their erection to join them together in some convenient place, for the purpose of ascertaining whether all the parts, as they come from the shops, fit each other, which prevents delay afterwards. Each piece, of which there are thousands, are all marked, so that they may be easily selected when required. The present structure has been drawn and built upon what is known as Fink's plan, which differs in some respects from that of Mr. Wendell Bollman, whose fame in this department of architecture is well known. The principal feature consists in the distribution of weight to the various parts and the peculiarity of diagonal bracing, at once giving it strength and pleasant swerving. One span is now joined together at Mount Clare, and is ready for removal. The others are rapidly progressing, and it is anticipated that the work will be permanently put up in the course of two months. Mr. William G. Primrose, in charge of one of the machine shops, superintends the joining of the work, under the orders of Mr. Thatcher Perkins, master of machinery. There are now not less than seventy-one bridges on the main stem of the road, which are constructed almost entirely of iron, and all pronounced in the best condition. Their aggregate length is nearly 8,000 feet. There are also eighty-two stone bridges. —*Balt. Amer.*

Mobile and Great Northern Railroad.

The Mobile *Price Current* gives the following statement relative to the progress and condition of this road:

On the 15th of January, 1860, contracts were made for the greater part of the graduation, masonry and bridging required on the road east of the Tensas river, to be finished by the 1st of January, 1861; and on the 1st of March, 1860, all the bridge superstructure from the east bank of the Tensas river to the city of Mobile, was contracted for, to be completed in two years, or as the company may require it. On the 7th of March, 1860, contracts were entered into for the materials for the piers of Tensas and Mobile rivers, which are to be of iron, and for all the rails and fastenings be delivered at different times, from October, 1860, to July, 1861. All these contracts were made with responsible parties, and at prices which are reasonable. The Directors have therefore, made all the preparations requisite to have the road in operation from the Alabama and Florida Railroad to the Tensas river early in the summer of 1861, or in time to take off the crop of that year, and into the city in the latter part of 1862 or early in 1863.

Mount Cenis.

The perforation of Mount Cenis is a gigantic work, and when completed will abridge by twelve or fourteen hours the distance between the Italian Peninsula and Western Europe. This tunnel was begun three years ago. The two extremities are at Bardonneche, in Piedmont, and at Modane, in Savoy. The whole distance to be cleared amounts to 13 chiliometres, of which one only is at present completed—600 metres at Bardonneche, and 400 at Modane. At this rate, thirty-nine years would be required to complete the work, were it not for the engine invented by Messrs. Grandis, Grattoni, and Someiller, by the help of which it is calculated that this magnificent operation will be brought to a termination in about a sixth of the time This is always supposing that no unforeseen obstacles present themselves at a depth of 8,916 feet (French) beneath the earth's surface, for it must be remembered that every step in advance is, in the present case, nearly equivalent to a step downwards. The new perforator will be in complete action by the end of the present month, and hopes are entertained of a triumphant result.

Railroad Between Cincinnati and Nashville.

At a meeting of the City Council of Nashville on Wednesday last, a committee of citizens, consisting of Gen. Washington Barrow, Col. V. K. Stevenson, Geo. Maney, Mayor Hollingsworth, H. C. Seymour, Dr. C. K. Winston, James M. Hamilton, and R. C. McNairy, were appointed to visit the city of Cincinnati and confer with gentlemen there in relation to the necessity and importance of building a railroad from Nashville to Cincinnati. The Committee will be in Cincinnati on Monday next. We imagine the proposed improvement may be denominated an *air*-line road.—*Louisville Journal.*

Newark and Bloomfield Railroad.

The annual meeting for the election of Directors of the Newark and Bloomfield Railroad Company was held last week at Newark. The Board of Directors of last year were re-elected. It was reported that the receipts of the year ending July 31, 1860, were $19,051.70, an increase of $8,845.32 over the preceding year. The expenses were only increased about $1,000. The total number of passengers carried over the road for the year was 107,169, being an increase of 30,469 over the previous year. Surveys have been made for the proposed extension to the Notch, near Paterson, but nothing further has been done in the matter.

Indianapolis and Cincinnati Railroad.

The following gentlemen have been elected Directors of this road for the current year, viz:

Wm. Dwight, Boston; Wm. A. Routh, New York; T. A. Morris, C. S. Stevenson, Indianapolis; A. R. Forsyth, Greensburg; L. B. Lewis, Lawrenceburg; H. C. Lord, Samuel Wiggins, N. Wright, Cincinnati.

Wm. Dwight, of Boston, is the only new member, having been elected in place of R. H. Manning, of New York, who declined a re-election.

French Railway Earnings.

The traffic receipts on nine of the principal railways for the half-year ending the 30th of June amounted to 7,260,532*l.*, and for the corresponding period of last year to 7,183,755*l.*, showing an increase of 76,777*l.*, or about 1.07 per cent. The receipts on the Paris and Mediterranean for the half-year amounted to 1,808,018*l.*, against 1,967,-217*l.* at the corresponding period of last year; on the Paris and Orleans to 1,224,281*l.* against 1,-240,482*l.*; on the Eastern to 1,172,387*l.* against 1,121,647*l.*; on the Northern to 1,135,375*l.* against 1,071,682; on the West and North Western to 951,016*l.* against 894,755*l.*; on the Southern to 465,243*l.* against 430,264*l.*; the receipts on the new lines of the Paris and Mediterranean amounted to 324,618*l.* against 283,893*l.*; on the Lyons and Geneva to 112,985*l.* against 113,754*l.*; and on the Ardennes to 66,629*l.* for the half year ending 30th June against 60,061*l.* in the corresponding half of 1859. The aggregate length over which the traffic was carried was 5,500 miles, against 5,388 at the corresponding period of last year. The above receipts are exclusive of the Government duty of 10 per cent. which is deducted from gross receipts.

Port Royal Railroad.

The Directors of this important enterprise met at Barnwell Court House on 30th ult. Progress was made in the more complete organization of the company. C. S. GADSDEN, Esq., was elected Chief Engineer, and arrangements was set on foot for the continuation of the surveys, with the view to the final location of the road. The engineers will take the field on the first of October. The friends of the road are sanguine, and they have assurances of substantial interest and material aid. The charter granted by the State of Georgia allows the entrance into and passage through its territory, without restrictions. It is an important work for Charleston, and its completion adds greatly to the value of the Charleston and Savannah Railroad, in which the City Council have stock to the amount of $260,000, and in which our citizens are stockholders.—*Charleston Mercury.*

Advance in Freight.

The New York Central and Erie Railroads have agreed upon a further advance in rates from Lake ports to the East, to take effect to day, as follows:

	4th class.	Flour.
To Albany, Troy and Schenectady	35	70
" New York	39	80
" Boston	47	95

Michigan Southern Railroad.

The holders of the Second General Mortgage Bonds of this company are notified that the Treasurer will, after the 30th inst., fund all unpaid coupons of said class of bonds of earlier date than November, 1859, and the four coupons of November, 1859, May and November, 1860, and May, 1861, by giving in exchange therefore the second general mortgage bonds of this company at par. For all coupons offered in full sets the bonds given in exchange will bear interest as of November, 1860. The holders of the plain unsecured bonds of this company may exchange said bonds for first mortgage bonds of the Detroit, Munroe and Toledo Railroad Company at par. For the coupons now due thereon scrip will be issued, convertible in like manner.

Detroit and Milwaukee Railroad.

By an order of the U. S. Circuit Court, the Detroit and Milwaukee Railroad is to be sold at Detroit on the 4th day of October next, upon a mortgage held by the Great Western Railway company, for advances made to complete the road.

Increase	$24,368 54

The earnings of the Michigan Southern and Northern Indiana Railroad Co. for August were:

	1860.	1859.
Passengers	$63,071 07	$57,214 21
Freight	120,791 65	84,084 74
Mails	4,655 21	4,583 41
*Expenses and miscellaneous	3,546 65	5,287 90
Total	$192,064 58	$151,070 26

* Miscellaneous expenses are deducted from the amount above—if added, would increase the amount of earnings for 1860, about $2,200—which will make the gain in earnings for August, 1860, $43,094 36.

The earnings of the Galena and Chicago Union Railroad for August were:

1860 $162,691
1859 119,280

Increase $43,411

The earnings of the Chicago and Northwestern Railroad for August, 1860, were $49,142 17
Do. 1859 28,514 38

Increase $20,627 79

The earnings of the Toledo and Wabash Road for August, 1860, were as follows:

Passengers	$23,032 19
Freight	96,385 52
Mail and express	3,366 66
Total	$122,784 97
August, 1859	72,295 02
Increase	$50,489 97

The earnings of the Macon and Western Railroad for August were:

Passengers	$14,846 80
Freight	19,582 55
Mail	866 45
Total	$35,295 80
August, 1859	28,948 50
Increase	$7,246 80

The following is an approximate statement of the earnings of the Pittsburg, Fort Wayne and Chicago Railroad Company for the month of August, 1860, compared with the same period of last year, viz:

	1860.	1859.
From Freight	$112,032 63	$113,718 00
" Passengers	72,558 11	70,834 49
" Express	2,700 00	3,375 00
" Mails	7,825 00	7,825 00
" Rent of road	7,683 33	5,500 00
" Rents and Miscel.	239 50	262 04
Total	$202,438 57	$201,514 53
Increase		$924 04
Total from Jan. 1st, to Aug. 31st, 1860	$1,378,566 90	$1,160,386 39
Increase		$218,180 51

The Philadelphia, Wilmington and Baltimore Railroad has increased its gross receipts during seven months of 1860, over the corresponding time in 1859, as follows:

	1859.	1860.	Gain.
January	$87,016 49	$96,287 03	$9,270 54
February	86,703 30	100,297 56	13,594 26
March	103,062 94	108,639 86	5,626 92
April	87,681 57	95,055 17	7,373 60
May	90,388 50	98,161 31	7,772 81
June	83,122 57	102,582 91	19,460 34
July	91,682 96	102,247 45	10,564 49
Total	$629,658 33	$703,321 29	$73,662 96

The earnings of the Cleveland and Mahoning Railroad for the month of August were as follows:

	1859.	1860.
Passengers	$4,340 87	$4,760 09
Freight	11,073 91	12,602 61
Coal	9,553 99	20,759 06
Mails, etc.	262 50	418 75
Gross earnings	$25,231 27	$38,540 51
Expenses	8,894 92	11,519 79
Net earnings	$16,336 35	$27,020 72
Increase		$10,684 37

The earnings of the New York and Harlem Railroad for August were as follows:

August, 1860	$104,442 54
" 1859	100,118 04
Increase	$4,324 50

The following are the comparative earnings of the Pacific Railroad for August, 1859 and 1860:

MAIL LINE.	1859.	1860.
Passengers	$23,705 00	$20,987 00
Freight	22,597 97	27,332 85
Mails	2,180 00	2,125 80
	$48,402 98	$50,446 55
Increase		$2,043 57
SOUTHWEST BRANCH.		
Passengers	$510 55	$1,975 40
Freight	744 03	3,159 40
Mails		275 00
	$1,254 58	$5,409 80
Increase		$4,155 22

Annexed is a statement showing the freight and passenger business, also the total receipts, for August, in comparison with the corresponding month of 1859, on the Housatonic Railroad:

	1859.	1860.	Increase.
Freight	$17,103 02	$18,810 37	$1,707 35
Passengers	12,006 73	12,861 28	854 55
Total receipts in Aug.,	1860.	$32,603 82	
Do. do.	1859.	30,041 91	
Total increase			$2,561 91

The following statement exhibits the earnings of the Milwaukee and Mississippi Railroad for August, in comparison with the earnings for the corresponding month of last year:

	1859.	1860.
Freights	$28,251 26	$41,736 96
Passengers	19,299 62	15,850 33
Mails and rents	1,835 42	3,453 72
Total	$49,386 30	$61,041 61
Increase		$11,655 31

The earnings of the Dayton and Michigan Railroad for the month of August, 1860, were:

Passengers	$15,755 69
Freight	20,015 24
Mail and express	2,462 50
Total	$38,233 43

The August earnings of the Worcester and Nashua Railroad were over $2,000 more than in any previous month since the opening of the road. The statement is as follows:

Earnings in August, 1860	$25,977 57
Do. 1859	22,399 10
Increase	$3,578 47
Earn'gs for nine m'ths, to Aug. 31, '60.	$164,913 76
Do. do. do. '59.	151,231 98
Increase	$13,681 78

The following is the Illinois Central Railroad Company's statement for August, 1860:

Land Department.

Acres Construction Lands sold	3,011.83	for	$47,997 72
Acres Interest Fund L'ds sold	280.00	"	3,918 82
Acres Free Lands sold	690.32	"	12,616 80
Total sales during the month	3,981.83	for	$64,533 34
To which add Town Lot sales			279 30
Total of all			$64,812 64
Acres land sold since Jan'y 1, 1860	23,152.41	for	$366.650 29
Acres sold prev'sly	1,237,260.55	"	15,735,837 02
Total	1,260,412.96	for	16,102,487 31

Construction Bonds canceled in August, 1860	$27,500 00
Construction Bonds canceled previously	1,513,000 00
	$1,540,500 00
Free Land Bonds canceled in August, 1860	$4,000 00
Free Land Bonds canceled previously	208,000 00
	212,000 00
Total Bonds canceled up to Aug. 31, 1860	$1,752,500 00
Cash receipts in August, 1860	$48,154 06
Total cash and bonds received to August 31, 1860	$3,682,443 77

Traffic Department.

Receipts from passengers		$72,982 09
Do.	freight	160,935 66
Do.	mails	6,358 33
Do.	rent of road	5,252 00
Do.	other sources	4,304 20
Total receipts for August, 1860		$249,838 28
Do. do.	1859	181,474 72
Increase		$68,363 56
Total receipts since Jan. 1, 1860		$1,620,530 64
Do. correspond'g period, '59		1,177,807 29
Increase		$442,723 35

The earnings of the Mobile and Ohio Railroad have been as follows:

From Aug. 1, 1859, to Aug. 1, 1860	$1,200,108
Do. 1858 do. 1859	773,179
Increase	$426,929
	Bales.
Receipts of cotton for the same period	223,290
Increase over last year	86,460

The unfinished portion of the road is under contract, guarantying its completion by the 1st of January, 1861.

The official statement of the earnings of the New York Central Railroad in August is as follows:

August, 1860	$689,125 28
" 1859	591,919 97
Increase	$97,205 31

The earnings of the New York and New Haven Railroad Company for August, 1860, were as follows:

From Passengers	$78,007 13
" Freight	12,000 00
Total	$90,007 13
Earnings in August, 1859	80,768 86
Increase	$9,238 27

The earnings of the Little Miami and Columbus and Xenia Railroads for the month of August, 1860, were:

Passengers	$57,558 82
Freight	55,791 75
Mails	2,408 33
	$115,758 90
August, 1859	119,740 33
Decrease	$3,981 43

The earnings of the Erie Railroad for the month of August, 1860, were | $477,652 41
Earnings August, 1859 | 378,544 74
Increase | $99,087 67

Railroad Progress in Massachusetts.

In 1827 or about the third of a century ago, a short railroad—the Granite Railroad—extending from the quaries in the town of Quincy to the tide-water of Massachusetts Bay 3½ miles, was completed. This was the first railroad constructed within Massachusetts and within the limits of the United States.

From this insignificant beginning, has sprung the vast net-work of railroads which now stretches in continuous lines from the Atlantic border to the Missouri river, and from the St. Lawrence basin to the Gulf of Mexico, with an aggregate length of not less than 33,333 miles, or on the average of 1,000 miles for each year since the auspicious day on which the first rail was laid in this country.

In relation to its extent of territory the State that first inaugurated the railroad still maintains its supremacy, having more railroad mileage within its limits than any other State. Exclusive of the passenger railroads in the city of Boston, and also exclusive of the Granite Railroad above mentioned, which indeed was never used for other than an accessory purpose, the State of Massachusetts has at the present time 1,300 miles of road being one mile to every six square miles of its territory.

The real railroad era in Massachusetts, however, does not commence with the completion of the Granite Railroad, but in 1834, in which year portions of the lines leading from Boston to Lowell, Worcester and Providence were first brought into use. From this time to the end of 1838 the mileage open in each year is shown in the following table:

Titles of Companies.	1834.	1835.	1836.	1837.	1848.
Bos. & W'ter	31.50	44.63	47.63	47.63	47.63
Bos. & Prov.	14.00	43.26	43.26	43.36	43.26
Bos. & Low'l.	....	25.76	25.76	25.76	25.76
Bos. & Maine.	....	....	11.20	11.20	11.20

American Railroad Journal.

Saturday, September 15, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

What can the Erie Railroad Pay on its debt Share Capital.

The following is a condensed statement of the cost, earnings, current expenses, net earnings, indebtedness, and interest on same, of the New York and Erie Railroad, for seven years, embracing the whole period from its opening to Dunkirk, to September 30, 1859:

Years.	Total earnings.	Expenditures on all accounts.	Net receipts over expenditures.
1852	$3,537,766	$1,841,168	$1,728,647
1853	4,318,962	2,518,782	1,966,203
1854	5,359,958	2,806,027	2,545,010
1855	5,488,993	2,680,328	2,749,161
1856	6,348,990	3,763,389	2,442,102
1857	5,742,606	4,189,229	1,638,746
1858	4,151,616	4,065,041	1,086,675
1859	4,482,149	3,209,008	1,273,141
Totals	$40,431,040	$25,072,971	$15,429,585
Y'r av.	5,053,880	3,134,121	1,928,698

	Total amount of indebtedness.	Interest on same at 7 per cent.
1852	$19,326,922	$1,352,884
1853	22,828,895	1,600,122
1854	25,126,669	1,758,866
1855	25,902,546	1,813,177
1856	25,882,066	1,811,744
1857	26,873,482	1,881,143
1858	27,170,273	1,901,919
1859	27,301,308	1,911,091
Totals	$200,442,047	$14,029,986
Yearly aver.	25,055,256	1,753,748

Excess of yearly net earnings over interest and expenses $174,950

Total excess of same for seven years.. $1,399,599

For the period named, the ratio of current expenses to gross earnings has been a little over 61

per cent. To pay the interest on the present debt of the Company, $27,363,121, $1,915,418 will be required annually; a sum less by $13,161 than the average annual net earnings of the road for seven years past.

If the Erie Railroad should on the average prove as productive as it has since its opening, to the present time, its earnings would be ample to pay the interest on its whole funded debt of $27,361,-121. But that is no reason to suppose that they will not, for the future, exceed largely what they have been. From 1856 to 1859 the earnings fell off nearly $2,000,000. For the coming year they will be $1,000,000 better than for 1859. We have no reason to anticipate such excessive fluctuations in the earnings of railroads in the future as we have seen in the past. In the United States even, these fluctuations have been excessive only in the newly settled portions of the country, in which the accumulations of wealth had been small, and in which the industry of the people have not had time to become thoroughly organized and systematized. The railroads of the State of Massachusetts suffered little from the revultions of 1857. It is an old, wealthy and densely settled State. The gross and net earnings of all the roads within it since 1856, and the dividends paid, will be seen in the following statement.

	Gross Earn.	Net Do.	Divid. paid.
1856	$10,285,953	$4,225,883	$1,940,450
1857	9,734,321	3,852,101	2,203,889
1858	8,934,792	3,708,950	2,149,200
1859	9,520,900	4,218,177	2,234,977

In the same period the Railroads of the newly settled Western States fell off nearly one half, and dividends were entirely suspended. The roads of this State having intimate relations with them, such for instance as the Erie, came in for their share of loss. The Erie itself traverses for a long distance a new country, subject to excessive fluctuations like the West. But every year the business of this road will be placed in a firmer basis, and exhibit for the future, that uniformity in receipts characteristic of old roads.

But the Erie will soon receive new elements of strength in the completion of the long Dock and in the construction of the Atlantic and Great Western Railroad. The former will in few months be in readiness for use, and will give the road unequalled facilities for business. The Atlantic and Great Western Railroad is making rapid progress. Already has some 85 miles of road been opened, and the work is being rapidly prosecuted in that portion of the line in Pennsylvania. This road will be a most powerful arm for the Erie. It traverses an excellent country and will give the former an independent connection, which has long been greatly needed with the net work of Railroad in Ohio, and through them with the entire Railroad system of the West.

Dayton and Western Railroad.

The following gentlemen have been chosen Directors of this road for the current year: V. Winters, J. Harshman, J. D. Philips, R. W. Steele, H. L. Brown, H. Herrman, E. F. Drake, R. Green, G. W. Cass, E. C. Frash, J. W. Kirk, J. W. Owens, S. Brindly.

Another Branch of Louisville Railroads.

Railroad Celebration.—The citizens of Clarksville, Tenn., are making arrangements to celebrate the completion of the Railroad from Clarksville to this city.—*Louisville Journal.*

New York and Harlem Railroad.

This company like all others that have been embarrassed, is rapidly getting into good shape in respect to its finances. It has no floating debt. Its interest has been always regularly paid. It will, for the coming year earn, over expenses, the interest on its debt and dividend on its preferred stock. At present the surplus earnings are used for the liquidation of the over-due bonds. The non-payment of these is one of the reasons why many of its securities are selling at such low rates. The company for the coming year anticipates a very large increase in its earnings. It has made very favorable arrangements with the New York Central, both for a passenger and freight business, and its trains are to be run in connection with those of that road. A very large increase of traffic must result. The road is well managed, and is in excellent condition, having had very large sums expended upon it for several years to make up for past deficiences and neglects. It has great elements of strength, and all that is wanting is an adjustment of a small over-due debt to have its securities take a deservedly high place in popular favor. The amount of bonds at present over-due is only about $150,000. There will fall due in February $100,000 more. With the exception of these trifling sums, the finances of the company are in excellent condition. For the bonds of the company due in 1863, to the amount of $1,000,000, the company has a real estate which may be applied to their payment, probably of equal value.

Population of Western Cities.

The increase in population of Western cities since 1850, has not been so great as anticipated. It has been very large, but in many cases it has fallen far below what has been claimed. Before the enumeration nothing less than a rate of 300 or 400 per cent. would satisfy the people of the respective cities, each of which wanted the credit of being the smartest, most enterprising and most favorably located town in the country.

The population of Cincinnati by wards is stated as follows:—

First	Ward..	7,376	Tenth	Ward..	11,520
Second	" ..	4,172	Eleventh	" ..	12,731
Third	" ..	8,316	Twelfth	" ..	18,590
Fourth	" ..	9,339	Thirteenth	" ..	7,549
Fifth	" ..	5,905	Fourteenth	" ..	9,039
Sixth	" ..	7,796	Fifteenth	" ..	11,054
Seventh	" ..	7,511	Sixteenth	" ..	10,680
Eighth	" ..	13,280	Sevent'nth	" ..	4,040
Ninth	" ..	9,062			

Total, 1860 158,851
Population in 1850 115,435

Increase 43,396
Increase per centum 37.61

Of all the important towns in the country the growth of Chicago has been the most rapid. In 1850, it had a population of 28,000. The rate of increase has been very nearly 400 per cent. Its population by wards is as follows:

1st,	First	Ward	11,494
	Second	"	10,117
2d,	Third	"	7,094
	Fourth	"	5,012
3d,	Fifth	"	11,402
4th,	Sixth	"	15,066
5th,	Seventh	"	17,939
6th,	Eighth	"	6,706
	Ninth	"	5,213
7th,	Tenth	"	18,302
	Total		109,420

In commerce and wealth it has undoubtedly increased in a much greater ratio. The progress of this city may be regarded as a kind of improvisation,—a creation of the mechanical skill of the day. Measured by the length of its roads, it is the greatest railroad centre in the world. All these have been constructed since 1850. As far as the supplying capital to it is concerned, it has for the past ten years been the most fortunate spot in the world.

We regard the past rapid progress of the city as shadowing its future. Its location is most favorable in every particular. Lying upon the basin of the great Lakes, its commercial facilities cannot be excelled. Its artificial avenues extend in any direction into districts of great fertility. It has a good climate and is abundantly supplied with all the material that lie at the base of commercial or manufacturing greatness.

On the score of population, the palm for the greatest number of people seems to be borne off by St. Louis. It is claimed that the recent census shows an aggregate population of 161,000, against 77,000 for 1850, showing a rate of increase of 109 per cent. This is a rate greater than was anticipated or claimed. St. Louis has had the advantage over all Western towns in possessing a large amount of capital in the shape of money. If the statement published is not an exaggerated one, the future progress of the city must be very rapid, as it is only just beginning to feel the effect of its system of railroads. Of these lying within the State of Missouri, not one is yet completed, and not a single one in position to achieve one-half the results predicated of it. The present western terminus of the Pacific Railroad is yet nearly 100 miles from the western boundary of the State. The Southwest Branch is not yet sufficiently extended to show any useful results. With the Southwestern portions of the State, one of the most valuable mineral districts in the United States is reached. The Iron Mountain Railroad must be extended to some point on the Mississippi to be productive. The completion of the system marked out by the State would add vastly to the commerce and importance of its commercial capital.

The cities of secondary importance in the Northwest, Cleveland, Detroit and Milwaukee, have very nearly the same number of inhabitants. They stand respectively as follows:

	Population in 1860.	Population in 1850.	Increase.
Detroit	46,834	21,019	25,815
Milwaukee.	45,325	20,061	25,264
Cleveland	43,550	17,034	26,516

Cleveland has gained somewhat by the addition of Ohio City, and has increased less, in fact, than either of the other two. They all fall far below the estimates, but still show a rate of increase exceeding 100 per cent. for the past ten years. We presume that none of them has gained any considerable amount since 1857.

Population of Milwaukee.

For the last twenty years the population of Milwaukee has increased at following rates:

Years.	Population.
1835	500
1840 U. S. census, ...	1,700
1845	8,000
1850 U. S. census, ...	20,061
1855 State census, ...	30,448
1860 U. S. census, ...	45,[illegible]

Insurance Dividends.

The Germania Fire Insurance Company has declared a semi-annual dividends of 6 per cent. payable on demand.

The Exchange Fire Insurance Company has declared a semi-annual dividend of 6 per cent. payable on demand.

The Phenix Fire Insurance Company of Brooklyn, has declared a semi-annual dividend of 8 per cent. payable on demand.

The Atlantic Fire Insurance Company of Brooklyn has declared a dividend of ten per cent. payable on demand.

The Corn Exchange Fire and Inland Navigation Insurance Company, has declared a semi-annual dividend of ten per cent. payable on demand.

Louisiana Sugar Crop.

The annual report of P. A. Champomier states the Sugar Crop of Louisiana the year 1859, at 221,810 hogsheads or 255,115,796 pounds. The crop of the next preceding year was 362,296 hogsheads or 414,796,000 pounds. The deficit compared with that of last year is therefore 140,656 hogsheads or about 159,681,214 pounds.

The following table shows the amount of Sugar produced in each parish for the past two years:

	1859.		1858.	
Parishes.	Sugar Houses.	Sugar Hhds.	Sugar Houses.	Sugar Hhds.
Rapides	36	12,876	36	17,133

Cistern Bottoms		5,763	....	9,252
Total hogsheads		221,840		362,296

The following table shows the crops for each of the last twenty-six years:

1834	hhds.	100,090	1847	hhds.	240,000
1835	"	30,000	1848	"	220,000
1836	"	70,000	1849	"	208,000
1837	"	65,000	1850	"	211,000
1838	"	70,000	1851	"	236,000
1839	"	115,000	1852	"	322,000
1840	"	87,000	1853	"	449,000
1841	"	90,000	1854	"	347,000
1842	"	140,000	1855	"	231,000
1843	"	100,000	1856	"	74,000
1844	"	200,000	1857	"	279,000
1845	"	186,000	1858	"	362,000
1846	"	148,000	1859	"	222,000

The prices of Sugar at New Orleans ranged in 1859–60 from 5¾c per lb. in Sept. 1859 to 7¾ cents in August 1860. The range in 1858–9 was from 5½ to 7 cents.

The total quantity of Sugar imported into the United States for the year ending 31st December, 1859, was ..... 262,829 tons
Add to this stock on hand, 1st Jan.. 13,346 "

Total foreign supply ..... 276,175 "
Deduct quantity exported '59.14,194 "
And st'k on hand 1st Jan. 1860 22,947.–37,141 "

Total for consumption ..... 239,034 "
Add crops of 1858–9 of Louisiana, Texas, Florida, the bulk of which was distributed in 1859 193,425
Shipped to California ..... 1,285–192,150 "

Total for consumption 1859 ..... 431,184 "

The consumption of domestic and foreign cane-sugar in the United States for the past ten years, has been as follows:

Year.	Domestic.	Foreign.	Total.
1850	126,421	143,045	269,466
1851	107,438	181,017	288,485
1852	118,659	196,558	315,217
1853	172,379	200,610	372,989
1854	234,441	150,854	385,298
1855	185,148	192,604	377,152

1857	39,000	241,765	280,765
1858	143,634	244,758	388,492
1859	192,150	239,034	431,184

The average increase for the above 10 years has been about 6¾ per cent. per annum.

The total yield of Molasses in Louisiana in 1859 is estimated by Champomier at 17,858,100 gallons, allowing 70 gallons to each 1,000 lbs. of sugar produced. Total yield including Texas, Florida, etc. 25,967,760 gallons. Total consumption foreign and domestic, 54,260,970 gallons.

Morris and Essex Railroad.

The following is a statement of the financial condition of this road and of its operations for the past year:

Capital stock		$1,157,899 00
Funded debt		340,000 00
Contingent fund		268,434 88
		$1,766,234 88
Cost of road and equipment	$1,622,556 06	
Telegraph stock	2,000 00	
Capital stock of Newark and Bloomfield R. R.	55,000 00	
Wood on hand paid for.	4,500 00	
Cash and cash items..	82,178 82	
		$1,766,234 88

Income from passengers, freight, mails and sundries, during the year ending December 31st, 1859:

From passengers	$146,588 66
" freights	100,203 94
" mails and sundries	8,443 75
	$255,236 35

EXPENSES.

Paid for repairs of road, bridges, buildings &c	$45,168 76
Paid for repairs of engines, cars and machinery	28,751 88
Paid for wood, oil and waste	19,241 33
" for operating the road	46,848 40
" for salaries and insurance	7,904 65
	$147,915 02
Paid interest during the year on the funded debt of the company	$22,749 30
Paid two semi-annual dividends, one of 3 per cent. and one of 3½ per cent. on the capital stock of the company, amounting in the aggregate to	75,257 15
	$98,006 45

Eaton and Hamilton Railroad.

The receipts and disbursements, as shown by the annual report, to June 30th, are as follows:

From passengers and freight	$142,753 81
" sales of scrap iron	471 45
" " wood	135 39
" proportion of car account with other companies	2,638 12
" assets of the company prior to July 30th, 1859.	2,949 32
Total receipts	$148,948 00
The working expenses, including renewals, repairs, etc., during the same time	126,841 47
Of this sum, your relators have paid..	115,965 40
Leaving unpaid	$10,875 98

Of this amount ($10,875 98), $5,238 87 is due on the pay roll for June, and the balance for wood, rents, materials, etc.

In addition to the above, there remains unpaid for counsel fees, $2,500, and the further sum of $1,430 31 for balances on claims settled and partly paid up, leaving a total unpaid debt of $14,716 29.

To pay off this debt, your relators have on hand the assets per June report, that is to say	$5,013 22
Individual debts (available	519 21
And surplus wood and material on hand.	9,183 86
	$14,716 29

Ohio and Mississippi Railroad.

At a recent meeting of the stockholders of the Western Division of the road, the following gentlemen were chosen Directors for the ensuing year: Daniel D. Page, of St. Louis; Samuel L. M. Barlow, of New York; Joseph W. Alsop, of New York; Daniel R. Garrison, of St. Louis; George Partridge, of St. Louis; Samuel Gaty, of St. Louis; Peter N. Ham of St. Louis; Thomas Brown, of St. Louis; Henry D. Bacon, of St. Louis; George K. McGunnegle, of St. Louis.

At a subsequent meeting of the Board the following officers were chosen: S. L. BARLOW, *President;* H. D. Bacon, Vice-President; G. K. McGunnegle, Secretary; Peter N. Ham, Treasurer; Wm. Holmes, Counselor.

South-eastern of Portugal Railway.

This projected line of the handy length of 80 miles, commences by a junction with the terminus of the Barreiro line at Vendas Noyas, and proceeds to Evora and Beja. It will form the great trunk line through the heart of Southern Portugal, having no competition either by land or water. The Directors state they have the greatest confidence that the railway will be constructed and equipped for £8,500 per mile; but in order to provide against all contingencies, they have fixed the capital at £9,400 per mile, or £750,000. Deducting the subvention of £5,600 per mile, the cost is reduced to the trifling sum of £3,750 per mile, or £300,000, for the Government of Portugal grant a subvention towards the construction of the railway equal to £5,600 per mile, to be paid *pro rata* as the works progress.

On so slow a capital cost the profits would be very large assuming that only a half of the revenue of the Peninsular lines be obtained, and that it be worked at 50 per cent.

The capital consists of £750,000, of which £300,000 will be raised in 15,000 preference shares of £20 each, bearing 7 per cent. interest, payable half-yearly. The Government of His Most Faithful Majesty of Portugal has made a free grant in aid of the construction of the railway of £450,000, which will form the deferred stock, and be entitled to the entire surplus profits after payment of 7 per cent. interest on the above preference stock. Every allottee of preference shares will be entitled to a

like number of shares of £20, fully paid up, in the deferred stock of the company, for which separate scrip certificates will be issued.

In the list of Directors we notice the names of several gentlemen well acquainted with railway matters.—*Herapath.*

ANALYTICAL AND
Manufacturing Chemistry,
No. 24 WILLIAM STREET,
Rooms Nos. 28 & 29. NEW YORK.

CAREFUL Analysis made of all Minerals and Commercial Articles. Surveys and Reports made upon Mines and Quarries. Coal Oil Works planned and erected and contracts made. The best modes furnished for manufacturing, purifying and deodorizing oils from coals, petroleum, and other bituminous substances. Coal Oils tested and purified. Superintendents and skilled workmen furnished to manage Coal Oil Works and Mines. The Kerosene patents from which originated the Coal Oil Business of the United States were granted to Dr. GESNER.

GESNER'S, Chemists & Engineers.

Notice to Contractors.

ENGINEER'S OFFICE, COVINGTON & OHIO R. R., *At Callaghan's, Alleghany County, Va., 27th Aug., 1860.*

SEALED PROPOSALS, addressed to the undersigned, and endorsed "Proposals," will be received at this office until 12 o'clock M. of Wednesday, the 26th of September next:

For the construction of a Tunnel near 3,700 feet long, 15½ miles west of Covington;

For the grading of a temporary Railroad track over the above tunnel;

For the grading of about one-half mile and completion of the grading of one mile of Railroad, at and near Covington;

And for the cross-ties required for twenty-five miles of Railroad track and sidings, between Covington and the White Sulphur Springs.

The Specifications and plans of the work, and the form of contract, which states fully the terms and conditions upon which the above work will be let, may be had and seen at this office, on and after the 12th of September next.

The right is reserved to accept such proposals as will best secure the faithful construction and completion of the work, according to contract, and to reject any or all that are not satisfactory.

No transfer of the allotment of any work will be allowed.

Persons proposing for work, who may be unknown to the undersigned, are expected to present satisfactory references.

By order of the Board of Public Works.

3135 CHARLES B. FISK, Chief Engineer.

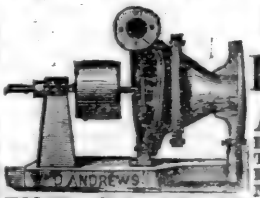
LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.			SHEET No			
1. General Table for all Bases and all Slopes.			13. for Base 18 ft. Slop.			1½ to 1
			14. " 20 "			1½ to 1
2. For Side Hill Cuts and Fills.			15. " 24 "			¾ to 1
3. Base 12 ft. Slopes	1½	to 1	16. " 24 "			1½ to 1
4. " 14 "	1½	to 1	17. " 25 "			1½ to 1
5. " 15 "	¾	to 1	18. " 26 "			1½ to 1
6. " 15 "	1	to 1	19. " 28 "			¾ to 1
7. " 15 "	1½	to 1	20. " 30 "			1 to 1
8. " 16 "	¾	to 1	21. " 30 "			1½ to 1
9 " 16 "	1	to 1	22. " 30 "			1½ to 1
10. " 18 "	½	to 1	23. " 32 "			1 to 1
11. " 18 "	¾	to 1	24. " 32 "			1½ to 1
12. " 18 "	1	to 1				

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.



Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT

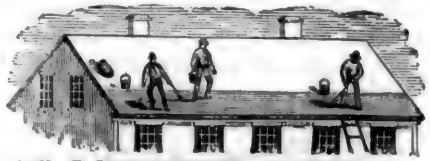
CEMENTS.



THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.
THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing,
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER CEMENT COMPANY.
THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.
E. M. BRIGHAM, Sec'y.

The *Baltimore and Ohio Railroad Company* was incorporated in the State of Maryland on the 28th February, and in the State of Virginia on the 8th March, 1827, with authority to construct a railroad from Baltimore to some eligible point on the Ohio River, with a capital of $5,000,000, and the right of organizing on the subscription of one-fifth that amount. The required subscription of $1,000,000 having been obtained, the Company was organized in the following April, and the surveys of the route at once undertaken under the superintendence of Col. S. H. Long and Jonathan Knight. To aid them several members of the United States Topographical Corps were detailed by the General Government. A report of the preliminary surveys was made in April, 1828, and the road located to the Point of Rocks during the ensuing summer. On the 4th July, ground was broken at Baltimore by the venerable Charles Carroll, of Carrollton, and shortly after the first section, extending to Ellicott's Mills, was put under contract. The remaining distance to the Point of Rocks was not let till the following summer.

At the close of 1828, the capital subscribed amounted to $4,000,000, of which $3,000,000 had been taken by individuals, $500,000 by the City of Baltimore, and $500,000 by the State of Maryland. Application for aid was made to Congress in the same year, but failed of success.

In 1830, a section of the road, within the limits of the city, was constructed. In 1831, it was extended to Frederick City, and in 1832, to the "Point of Rocks." At this place the Chesapeake and Ohio Canal Company had appropriated to itself for its proposed work, the narrow gorge through the mountains, and it was not until several years had elapsed that this obstacle to the further progress of the road was removed, through the interposition of the Legislature.

On the 9th March, 1833, a charter for the Washington Branch was obtained. It contained a stipulation that *one fifth* of the gross earnings from passengers should be paid over for the benefit of the State; the amount so paid not to be less than 25 cents from each passenger transported over the road. The construction of this branch was soon after commenced, surveys of the route having been previously made. Towards its construction the Baltimore and Ohio Company contributed $1,016,800. It was opened from the junction to Bladensburg, 24 miles, on the 20th July, and to Washington, 30 miles, on the 25th August, 1835.—(*See Washington Branch R. R.*)

Up to 1831, the trains were drawn over the road by horse-power. In January of that year, the Company offered $4,000 for the most approved locomotive engine, of American manufacture, to burn coal or coke, and $3,000 for the second best. Three engines were tendered the company, but only one, the "York," built by Phineas Davis, was accepted. This engine was mounted on four wheels, the movement being obtained by means of gearing, with a pinion and spur-wheel on one of the axles. By this engine a speed of 15 miles the hour was obtained on curves with radii of 400 ft., and double this speed on straight lines.

The portions of the road first built, were constructed with a flat bar, laid, in some cases, on a stone foundation; in others, upon longitudinal sills. The stone sub-structure was soon dispensed with, and a new improved pattern of rail came early into use.

In 1834, the road was opened to Harper's Ferry. In 1836, surveys were made for the extension of the road to Cumberland and Wheeling, for which purpose $3,200,000 were subsequently subscribed by the State. In the same year, the viaduct over the Potomac River, at Harper's Ferry, was completed, and a connection formed with the Winchester and Potomac Railroad.

At an early period in the history of the Company, permission had been obtained from the State of Virginia, for the location of the road through a portion of its territory. The time having elapsed in which the road was to be constructed, an act was passed, 1838, enlarging the time to five years, and requiring the Company to locate within the State, (with the exception of five miles,) its road from Harper's Ferry to Cumberland. This act also designated the City of Wheeling as the western terminus of the road. At the same time the State made a subscription to the capital stock of the Company to the amount of $1,058,420, being one-fifth of the estimated cost of road within its limits. This act was accepted by the Company, and the line to Cumberland placed under contract, and completed on the 5th November, 1842.

No progress had been made in the construction of the road beyond Cumberland from 1842 to 1847, the authority granted by the State of Virginia having expired. In the last named year, another act enlarging the time was obtained. The cost of the extension to Wheeling was estimated at $6,000,000. In 1849, the means for resuming work were provided by the negotiation of the bonds of the State granted to the Company. From that date it was vigorously pressed forward, and on the 12th January, 1853, the whole line formally opened for business. The road, however, was in an unfinished state, and an application was made to the City of Baltimore for a loan of $5,000,000, to be secured by a mortgage upon it. The application was granted, and the proceeds of the loan were expended, in arching the numerous tunnels on the line of the road, in laying a double track on a portion of it, and in various other improvements. The total length of all the tunnels on the road is 12,804 feet; the longest being the Kingwood tunnel, of 4,137 feet.

The Parkersburg Branch, (North Western Virginia) Railroad Company was chartered on the 14th February, 1851. The construction of its road was commenced in December, 1852, and it was so far completed that cars passed over its whole length on the 1st May, 1857. This road was built under the joint auspices of the City of Baltimore and the Baltimore and Ohio Railroad Company. The City guaranteed $1,500,000 of its 1st Mortgage bonds, and the Baltimore and Ohio Company $1,000,000 of its 2d Mortgage bonds. Since that period, exclusive of an additional guarantee of $500,000 bonds, the Baltimore and Ohio Railroad Company has advanced on account of the road, $1,795,326. In this advance, under agreement with the North Western Company, has been included $90,000 per annum for interest paid on the bonds for which the company is guarantor. In June, 1859, the Council of the City appropriated, for five years, 25 per cent. of the dividends on its stock in the Baltimore and Ohio Company, to aid the North Western Company in completing the tunnels on the line of its road. This road is operated under a contract, dated 27th December, 1856, by the Baltimore and Ohio Company, and which took effect on the 1st January, 1857. The contract is for five years, and may be renewed at the option of the lessee, for a second term. The rent paid is 40 per cent. of the gross earnings.—(*See N. W. V. RR.*)

SHARE CAPITAL—$13,118,902: classified as follows:

—held by individuals	54,262	shares	$5,426,200

Script, not funded	71.02	"	7,102
Prefer'd, 6 per ct. stock.	30,000	"	3,000,000

The "Preferred Stock" was subscribed by the State of Maryland in 1838 and paid for in 5 per cent. sterling bonds, and is a first lien on the road.

FUNDED DEBT—$10,781,833; classified as follows:

Mortgage, 6 per cent. loan $1,000,000
—issued in 1834, and payable, principal 1st January, 1867, and interest quarterly in January, April, July and October, at Baltimore.

Mortgage, 6 per cent. coupon bonds $700,000
—issued in 1850, and payable in 1880, and interest semi-annually, 1st January and 1st July, at Baltimore

Mortgage, 6 per cent. coupon bonds $2,500,000
—issued in 1853, and payable in 1885, and interest semi-annually, 1st April and 1st October, at Baltimore.

City Loan, 6 per cent. bonds..... $5,000,000
—in 1855, and payable, principal in 1890, and interest semi-annually, at Baltimore. Issued to the city of Baltimore in exchange for a like amount issued by the city for the benefit of the railroad company.

Mortgage, 6 per cent. coupon bonds..... $453,333
—dated 1st January, 1850, and payable, principal 1st January, 1860, and interest semi-annually, 1st January and 1st July, at Baltimore. Of these bonds $334,000 are held in Sinking Fund for the redemption of mortgage debts. They were issued in payment for iron.

Mortgage, 6 per cent. coupon bonds.... $1,128,500
—dated 1st January, 1855, and payable, principal 1st January, 1875, and interest semi-annually, 1st January and 1st July, at Baltimore.

SINKING FUNDS.

The company has established and has in operation three Sinking Funds for the redemption of its debts, namely:

1. *For the redemption of the* $5,000,000 *City loan.*—This fund was established in accordance with the ordinance of the City Council granting the loan, which stipulated for the retention of $500,000 to be invested as a sinking fund. The fund including the accrued interest now amounts to $671,615.

2. *For the redemption of the mortgage debts.*—This fund was established, under a resolve of the Board of Directors, passed on the 17th December, 1856, which appropriated the sum of $113,333 annually, being about one per cent. of the share capital for the redemption of its mortgage debt. The first payment was made for 1857. The fund now amounts to $413,222, being three years' contributions with interest. The proceeds have been invested in the purchase of the Iron Bonds which matured in 1857, '58 and '59.

3. *For the redemption of ground rents on Camden Station.*—This fund was established in 1853, and now amounts to $60,710.

FLOATING DEBT.—$285,324, viz: open accounts, $81,190; unclaimed dues, $19,942, and Washington Branch Railroad, $184,192.

Note.—The dividends from 1848 to 1852 inclusive were paid in stock.

Harrisburg and Lancaster Railroad Co.

The annual meeting of the stockholders of this company was held recently in Philadelphia. For the year ending August 31, 1860, the earnings and expenditures were as follows:

Gross earnings.....	$436 237 25
Expenditures	282,802 57
Net earnings.....	$153,334 68

Memphis and Charleston Railroad.

From the 10th annual report of the Memphis and Charleston Railroad Company, being for the year ending 30th June, 1860, we derive the following information.

The cost of the road and equipment, and everything incident thereto, including the Florence and Somerville branches, 291 miles in length, has been $6,744,647 or $23,177 per mile. Cost of Florence Branch $43,519 per mile.

The receipts and expenditures in the operative department have been as follows—

Passenger earnings	$975,259 33
Freight "	582,573 26
Mail "	55,175 00
Express "	17,438 38
Rents and privileges	4,650 74
	$1,635,096 67
Less road expenses	761,500 00
Net receipts for year ending 30th June, 1860	$873,596 67

The net receipts are equal to 13 per cent. of the entire cost of the road and equipment. The operating expenses $761,500—are 46½ per cent. of the gross earnings.

Deduct from the net receipts of	$873,596 67
the interest on the funded and floating debt	200,800 58
and there remains after paying for borrowed capital	$672,796 09

or 17½ per cent. on the share capital, including the 60 per cent. stock dividend and the Florence Branch stock, now amounting to $3,809,949 00.

Comparing the receipts and expenditures of the past with the previous year the aggregate increase in the receipts is found to be $304,284 27, or 22¾ per cent. This increase has been from the following sources—from passengers $223,336 [illegible] or 29½ per cent.; from freights $72,581 60, [illegible] 14¼ per cent., and from express and privileges $8,366 35, or 60 per cent. The increase in the number of bales of cotton transported has been 30,823 or 16 per cent. The cost of operating the road has increased $208,723 60, or 37½ per cent.

The great increase in the operating expenses is attributable to the following causes—the rebuilding of the Decatur and Spring Creek bridges (the former carried away by a tornado on the 17th July, 1859, and the latter by a freshet during the same year); extraordinary expenses incurred in the transportation department during their reconstruction; the increased numbers of new crossties and bridge timbers renewed; the heavy repairs to machinery and cars; the expenses of running a second daily train over the whole road, and the organization and operating the Florence Branch for six months of the year.

The floating debt is so small that there is no necessity to make any special provision for its payment. It will be liquidated as it falls due, from the assets on hand and the surplus earnings, after paying dividends.

The funded debt, due to the State of Tennessee, is already being provided for by a sinking fund of two and a-half per cent. per annum being paid to the State, as provided by law.

The following is a condensed balance sheet from the general books of the company, embracing the entire operations of the road from its organization to the 30th June, 1860—

	Dr.	
Construction proper		$5,327,285 98
Equipment		878,068 84
Incidentals:—commission, disc'nts, etc.		321,696 29
Florence Branch		217,596 06
Interest on company's bonds	$115,885 00	
Interest on State bonds,	65,700 00

Total		$7,627,796 83

The following statement shows the operations of the profit and loss account for the year ending 30th June, 1860:

	Cr.	
By balance 30th June, 1858		$664,645 40
By net proceeds of road, 1858-'59	$758,036 00	
By do. 1859-'60	873,596 67	
		1,651,632 67
Total		$2,316,278 07

	Dr.	
To interest and exchange account, 1858-'59	$195,838 10	
To do. 1859-'60	200,800 58	
		396,638 68
To dividend No. 1 declared 1st Dec. 1859 / To div. No. 2 decl. 29th Feb. 1860		1,503,686 00
To balance to credit 1st July, 1860.		415,953 39
Total		$2,316,278 07

It will be seen from these statements that the liabilities of the company are as follows:

Funded debt		$2,659,000 00
Less sinking fund		29,951 79
		$2,629,048 21
Floating debt	$260,111 95	
Less cash & c'sh ass'ts,	$172,179 79	
Less disc'nt on $41,000 Memphis City b'ds.	8,200 00–164,979 79	
		95,132 16
Actual liabilities of Company		$2,724,180 37

The original law provided that two per cent. should be paid annually to the Treasurer of the State on the original loan, and that the fund should be invested for the benefit of the Company paying it. But at the last session of the Legislature the law was so amended that two and a-half per cent. per annum was required, and the Company allowed to pay it either in money or bonds of the State at par, and the same should go as a direct credit to the Company for the amount, and the bonds be cancelled—reducing the amount that the Company would have to pay interest on thereafter.

The debt to the State will fall due in 1890 and the sinking fund provided is estimated to pay the whole at maturity. The Board recommends that a like sinking fund be provided to retire the Company's bonds falling due in 1880. The large amount of work yet to be done on the road and other business demands, however, will prevent any action been taken on this recommendation earlier than next year.

The directors declared a dividend of 60 per cent. out of the surplus earnings of the Company on the 1st December, 1859. This was done in compliance with a resolution of the stockholders passed at their 7th annual meeting and in accordance with the recommendations in the last annual report.

The Florence Branch, from Tuscumbia to Florence, Alabama, five and three-quarter miles in length, was completed and put into operation on the first day of January last. Its cost, as appears from the Chief Engineer's report, is $217,596 06. Under the contract with the stockholders in said branch, the surplus earnings of the road up to the time of the completion of this branch, was to be divided among the stockholders in the main road; and upon the completion of the branch, it became necessary to adjust this question between the stockholders in the main line and branch road, which the Board did by declaring a cash dividend of four per cent. to the stockholders in the main road, payable on the twentieth of March last, in addition to 60 per cent. stock dividend declared on the first of December previous. These two dividends consumed the net earnings of the road to the first of January last, except about $60,000, passed to the credit of profit and loss, by the Board, to meet any probable contingent liabilities that might arise out of the business transacted previous to the 1st of January last.

"It is useless to speculate" (we copy from the Report) "upon the future receipts and expenses of the road, as they depend so much upon the general extent of crops and the prosperity of the country that any speculation would be to some extent unreliable. The past year's business may be regarded as the most reliable data that could be obtained upon which to base future calculations—the receipts having been large and the expenses extraordinarily so, from causes before stated. Should the net receipts of last year be maintained, and the Board see no good reason why they may not, your future may be thus stated:

Net receipts		$873,596 97
From which deduct		
Interest on funded debt	$178,000	
Sinking fund of two per cent. on funded debt.	54,000	
Eight per cent. cash dividend on $3,809,950 stock	304,796–536,796 00	
Leaving an annual surplus of		$336,800 67

after paying interest and sinking fund on all funded debt, and an eight per cent. cash dividend to stockholders upon the present amount of stock, which includes sixty per cent. stock dividend declared 1st December last, and the Florence branch stock issued to the stockholders in that branch in January last.

This surplus will be amply sufficient to meet any extraordinary demands upon the Company, such as new iron and rolling stock. The policy adopted for the past year, of replacing, as early as possible, every temporary structure on the road with permanent works, should be continued until every trestle on the road has been replaced with permanent masonry or iron bridges, and every portion of the road, requiring it, is ballasted with broken stone, gravel or sand. Your road will then have a permanent way, will be reliable at all seasons of the year, and capable of running at as high speed as any road, and with as much safety. It will then be subject to but few casualties, and can be operated at much less expense. There is no economy in putting temporary structures on a railroad, or permitting either road bed or machinery to get out of order.

It will probably require the entire surplus earnings of the road for the next year, after paying interest and an eight per cent. dividend, to do the permanent work necessary and to pay for the machinery now under contract, and that which will be necessary to be purchased during the year. These expenditures are, however, only adding to the permanent value of your property, and will be added to the surplus earnings from year to year that have gone into construction, and will be a legitimate subject for a stock dividend at a proper time.

As the permanency and profit of railway business depends very much upon the sources from which the business is derived, the Board have thought it might not be uninteresting to the stockholders to have a general synopsis of their business, that they might make their own calculations as to the chances of increase or decrease. The following statement will show the different sources from which your revenue has been derived for the last year, taken from the various tabular statements embraced in this report:

LOCAL BUSINESS.

From Local Passengers East	$239,636 40
" " " West	254,303 45
" " Freight East	186,646 98
" " " West	296,073 79
" Mails and other local sources	77,264 08
Total local business	$1,053,924 70

THROUGH BUSINESS.

From Through Travel East	$228,386 77
" " " West	252,932 71
" " Freight East	85,573 18
" " " West	64,279 36
Total through business	$581,171 97
Total local, as above	1,053,924 70
Total business	$1,635,096 67

The Through travel has been $481,319 48. This is the only business which you have any serious competition for. It has been divided as follows:

The travel between New Orleans, Nashville and Louisville was	$10,467 60
The travel between Junction, Nashville and Louisville, was	20,591 75
The travel between Memphis, Nashville and Louisville, was	86,147 90
	$117,207 25

This travel will finally be lost to your Company by the completion of the Memphis and Louisville, and the Nashville and Northwestern roads; but by the completion of the Tennessee and Alabama, and the Winchester and Alabama Railroads, to intersect yours—the former at Decatur, and the latter at or near Huntsville—it is believed you will get more travel and freight from the local business from the counties lying South of Nashville, through which these lines run, than you will lose on the Nashville and Louisville through business.

Travel between New Orleans, New York, Boston, Philadelphia and Baltimore	$25,308 25
Travel between Junction and same points	5,795 35
Travel between Memphis and same points	24,394 96
	$55,498 56

This travel you now have and always will have competition for, via Cairo, and also via Louisville, when the roads now under construction are completed; but from the directness of your route, which is the shortest and most desirable route to those points, there can be no question about your retaining at least as much of this business as you now get. If the roads in connection with you will co-operate, run close schedules, and make such time as they can do with safety, your route can defy all competition for this travel.

The remainder of the through travel for which you will have competition, is that between New Orleans and points East and South of Chattanooga, in Georgia, South Carolina, North Carolina, Virginia and Maryland; amounting in all to $25,295 02. For this, as well as the New York and other Eastern travel from points south of Vicksburg, you will have competition by the roads building out of Mobile, and also by the Northeast and Southwest Railroad from Meridian, on the Mobile and Ohio Railroad to Chattanooga; but it will be some years before these roads are completed.

The remainder of the through travel, amounting to $283,318 65, is between Memphis, Grand Junction and Huntsville, to points east in East Tennessee, Virginia, North and South Carolina and Georgia, which, from the nature and character of the roads and country, and the directness of the routes, you never can have any competition for. This added to your local business would give you $1,337,243 35 of receipts per annum from business that you have no competition for, besides $198,000 83 that you have competition for; but a large portion of which you are compelled to retain against all competitions. The completion of the Mobile and Ohio Road, from Mobile to Corinth, which is expected to be completed within six or eight months, must give you a large travel from the line of that road, seeking an outlet in the Northeastern and Atlantic States, as well as increase your chances to supply that region of country with through freights.

After a thorough investigation of the effect that any line of railway now built, or building, can have upon your property and its value, your Board are thoroughly satisfied no injury is to result to you; but that you must, in the end, be beneficially effected by them, and especially the road north from Decatur, the road south from Corinth, and the extension of the Memphis and Little Rock Railroad westward to Little Rock, which is now a fixed fact and must be completed within the year 1861. These roads will greatly increase your business, and will most certainly bring you more business than any competing line can ever take away.

The property of the company now consists of 291 miles of first class road and 20 miles of sidings. The principal structures owned are—34 depot buildings; two large machine shops and the machinery therein; five engine houses; 34 water stations; 33 division houses and 10 portable division houses, and besides the real estate at depots, etc. There belongs to the Company 4½ sections of wood land.

The equipment is accounted for in the following list—43 locomotive; 26 first class cars; two branch road passenger cars; 9 second class and mail cars; 11 baggage cars; 2 extra baggage and pay cars; 286 box cars; 228 platform cars; 25 stock cars; 41 gravel cars; 74 road and hand cars; five stationary wood and water engines.

The company has also ordered six new first class engines—two passenger and four freight—to be delivered by the first October, and four first class passenger cars, to be delivered in July and August. From present indications in the freight department, more engines will be wanted at an early day. The Company's shops at Huntsville and Memphis, are large and well equipped and doing good service. Fifty-nine new freight cars have been built in the Company's shops within the past year, and the work is being continued as rapidly as possible, with the hope that the Company will be able to build all the freight cars that may be wanted hereafter, believing it to be much better policy than buying them, from the fact that they are better and not more costly, and besides that it gives the Company control of a larger force of efficient workmen, in cases of emergency, to put on repairs, which at times, is very necessary.

The floating debt being now about extinguished, the net receipts of the road will be applicable to the payment of cash dividends and permanently improving and fully equipping the road. The Board feel no hesitancy in saying, that the stockholders may rely upon an eight per cent. cash dividend, annually, hereafter; besides applying as much more to permanently improving their property. The last dividend was paid on 20th March. The receipts of July, August and September, will be applicable to the payment of dividends, and will be amply sufficient to pay a four per cent. dividend, which will be declared at a proper time, payable the 20th of September.

BOARD OF DIRECTORS 1859-'60.

Elected by Stockholders: Sam. Tate; Geo. P. Beirne; J. I. Donegan; Wm. Echols, Jr.; R. M. Patton; Wm. Dickson; Chas. W. Hunt, and R. C. Brinkley;—*elected by the City of Charleston:* W. J. Margrath and C. J. Colcock; and—*elected by the State of Tennessee:* John M. Carmack and Philip B. Glenn.

SAMUEL TATE, *President.*
SAMUEL CRUSE, *Secretary and Treas'r*, E. Div.
GEO. ROBERTSON, " W. Div.
WM. B. WALDRON, *Treasurer*, W. Div.
W. T. ROSS, *Superintendent*, E. Div.
B. AYRES, " W. Div.

Pennsylvania Improvements

The Lehigh Luzerne Railroad is to be extended 2½ miles in the Black Creek region; and to raise money for this extension the present stockholders have agreed to subscribe for the necessary number of additional shares of stock, preferring that course to the creation of another debt, and thereby exhibiting their confidence in the scheme, which has been attended with singularly good fortune.

The Shickshinny Coal and Iron Company's bridge across the Susquehanna is completed, with the rail track laid down upon it, and a connection is being formed with the Lackawanna and Bloomsburg Railroad. On the coal lands the necessary preparations are being made for the commencement of mining operations—by drifts, the coal lying above water level—in the spring of next year.

The Mine Hill extension railroad to Locust Gap, there to connect with the Shamokin Valley Railroad, whereby a continuous line will be opened from Schuylkill Haven via Ashland to Sunbury, it is said will be opened about the middle of this month.—*U. S. Railroad and Mining Register 8th Sept.*

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

American Railroad Journal.

Saturday, September 22, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

History of Railroads and Canals in the United States.

The editor of this JOURNAL has had for some time in preparation, and has now in readiness for delivery, the first volume of a work upon the Railroads and Canals of the United States.

The work assumes to be a detailed history of each enterprise. The date of charter, and of the commencement and completion of construction, and every fact of importance, historically, or as affecting the value of securities issued, are given in each case. The different classes of share capital; the amounts of bonds issued; nature of security; dates of issue and maturity; rates of interest, and the dates and places at which this as well as the principal sums are payable, are carefully described. Annexed to each sketch is a statement showing the amount of capital invested yearly; the length of line in operation; the receipts from the various sources of revenue; current expenses; net earnings and dividends. In every case a list of directors and officers are given, and a full statement of the financial condition of the company from its last annual report. For a more full and complete view of the general scope of the work, we have copied into this number of the JOURNAL the statement of the Baltimore and Ohio Railroad, leaving out several interesting tables for want of room.

The first volume contains 625 pages, royal octavo, and embraces the railroads of the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and District of Columbia. It is illustrated by two large maps—one of the New England States, including Canada East; and the other the States of New

York, New Jersey, Pennsylvania, Delaware, Maryland, Ohio, and Canada West. The maps have been drawn and engraved under the direction of Mr. G. Woolworth Colton, and no pains have been spared to render them entirely accurate. They are on a large scale, and each station on every road is laid down. They are the first maps of the kind ever published, and are admirable specimens of geographical accuracy and artistic skill.

The second and last volume is now in course of preparation and will be soon issued. The whole work will be illustrated by six maps—one a general map of the United States, and five maps of the different sections, two of which accompany the present volume.

The price of the first volume, with the maps in cases, will be five dollars. Parties residing at a distance or ordering the work by letter addressed to the author, or to the publishers, J. H. Schultz & Co., at the office of the Journal, can have the work delivered by express, without any charge for transportation.

Railroads of the United States.

In the work on the Railroads of the United States, referred to elsewhere, elaborate tables are given showing the total result of the operation of all the roads in each State from the opening of the first road. In the Journal of the 8th instant, we gave the statement for Connecticut. Below we give a condensed abstract for all the States embraced in the first volume.

States.	No. of Cos.	Len. of line in operation.	Total cost of all the roads.
Maine	16	511	18,382,207
New Hampshire	22	547	17,626,613
Vermont	11	512	23,133,231
Massachussetts	76	1,393	62,527,333
Connecticut	6	665	24,747,869
Rhode Island	14	63	3,258,567
New York	80	2,644	131,538.580
New Jersey	22	503	27,398,813
Pennsylvania	84	2,349	139,729,118
Delaware	6	92	2,421,379
Maryland	20	572	35,228,071

	Tot. earnings of all the r'ds.	Tot. expenses of do.	Tot. net earnings of do.
Maine	$12,216,366	$6,926,978	$5,289,388
N. Hampshire	18,474,435	10,456,549	8,017,886
Vermont	13,531,154	9,870,671	3,660,483
Massachus's	124,566,121	68,893,377	55,672,744
Connecticut	33,205,019	19,025,310	14,179,709
Rhode Island	8,477,427	1,893,724	1,583,703
New York	188,589,993	109,251,777	79,338,216
New Jersey	56,015,855	30,460,193	25,555,662
Pennsylvania	159,989,901	88,439,362	71,550,539
Delaware	1,052,315	1,003,638	48,677
Maryland	55,543,562	31,883,328	23,660,234

Sterling and Rock Island Railroad.

The Chicago *Press*, of August 24 says: "The arrangements to complete the Sterling and Rock Island Railroad within the next six or eight weeks are now all completed. Five hundred tons of iron are now in the city, and will be forwarded to their destination. The 4,000 tons of iron necesary for the entire road are all purchased, and will be delivered as fast as it can be laid. The ties are nearly all delivered, and the grading and bridging are about finished. The managers mean to have it done in time to bring the crops along the line of the road."

New York Courier and Enquirer.

This old and able journal, so long the representative of the commercial classes, is hereafter to be sold by news agents with the *Herald*, *Tribune*, *Times* and other journals. The *Courier and Enquirer* though a mammoth sheet, is one of the most public-spirited and enterprising papers of the day, and fully up with the times. Upon questions of finance and commerce it takes the lead of all other papers in the city in the extent, accuracy, and value of its information. It is to be sold for three cents per copy, and we have no doubt it will soon come to have a circulation quite up to that of our most enterprising dailies.

Railroad Earnings.

The following is a comparative statement of earnings and expenses of the Buffalo and State Line Railroad Company for the month of August, 1859 and 1860:

	Aug., 1859.	Aug., 1860.
EARNINGS.		
Passengers	$32,337 26	$36,753 53
Freight	29,951 20	31,805 07
Other sources	1,529 97	1,150 00
Total	$63,818 43	$69,708 60
Increase		$5,890 17
EXPENSES.		
Maintaining road	$23,231 51	$22,129 70
Repairs of machinery	3,732 15	8,149 64
Operating	18,922 94	14,646 54
Total	$45,886 60	$44,925 88
Increase		$960 62

The earnings of the Cleveland, Columbus and Cincinnati Railroad for August, 1860, were:

From Freight		$69,581 42
" Passengers		38,887 34
" Mails and express		3 690 88
" Rents		6,499 41
		$118,659 05
For August, 1859:		
From Freights	$47,717 46	
" Passengers	34,846 94	
" Mails and express	3,573 44	
" Rents	6,514 24	
		92,652 08
Increase		$26,006 97

The financial year of the Baltimore and Ohio Railroad Company commences with October. Comparing the revenue so far of the present year with that of the past fiscal year the following result is shown:

	1859.	1858.
October	$416,929 61	$391,395 10
November	421,287 56	380,879 75
December	355,662 13	336,202 25
	1860.	1859.
January	282,070 64	314,201 00
February	332,743 77	303,631 78
March	425,487 08	400,984 68
April	406,428 36	360,761 15
May	435,133 28	391,019 17
June	374,437 59	350,444 16
July	383,037 91	304,161 25
August	453,397 07	374,124 98
Totals	$4,296,615 00	$3,907,805 22
	3,907,805 22	
Increase present y.	$388,808 78	

The earnings of the Central Railroad Company of New Jersey, for Aug., 1860, were, $112,946 25
For the same month last year 91,531 42
Increase, 28 per cent $21,414 83

The following is a comparative statement of the earnings of the Little Miami and Cincinnati, Hamilton and Dayton Railroad for the month of August, 1859 and 1860:

	Little Miami.	Cin., Ham. & Dayton.
August, 1860	$115,758 90	$51.103 32
" 1859	119,640 33	46,082 22
Decrease	$3.981 43	Incr. $5,021 10

The Norwich and Worcester Railroad earned in

August, 1860	$37,258 62
" 1859	36,206 75
Increase	$1,051 87

The following statement shows the business of the Reading Railroad during the month of August, 1860, compared with the same month of 1859:

	1860.	1859.
Received from coal	$250,073 71	$173,851 02
Do. merchandise	49,100 38	31,433 92
Do. travel, etc.	38,320 85	36,410 39
	$337,494 94	$241,995 33
Transportation, roadway, dumpage, renewal Fund, and all charges	147,358 58	126,995 24
Net profit for the m'th.	$190,156 36	$114,700 00
Do. for previous 8 mos.	879,491 83	735,868 06
Total net profit for 9 months	$1,069,628 19	$850,568 15

The traffic of the Great Western Railway of Canada for the week ending Sept. 14, 1860, was as follows:

Passengers	$28,399 24
Freight and live stock	26,731 04
Mails and sundries	1,326 91
Total	$56,457 19
Corresponding week last year	44 017 44
Increase	$12,385 75

The earnings of the Hannibal and St. Joseph Railroad for August, 1860, were:

From Passengers	$34,400 40
" Freight	36,921 08
" Miscellaneous	3,761 47
Total	$75,082 95
Earnings in August, 1859	60,977 51
Increase	$14,105 44

Alabama and Tennessee Railroad.

We learn that the President of the Alabama and Tennessee River Railroad has made a trade for iron to clothe the road to Gadsden, subject to the ratification of the Board of Directors. This trade, if confirmed, will secure a speedy connection with Georgia and North Alabama. In less than one year from the time the track is laid to Gadsden, we will be in full connection with the Georgia and Tennessee roads.—*Talladega Reporter.*

Journal of Railroad Law.

CONTRACT TO CONSTUCT CARS; FAILURE OF DEFENDANT TO FURNISH MATERIALS AND INJURY SUSTAINED THEREBY; ON WHOM THE LOSS FALLS.

Misfortune is no respector of persons. The high and the low, the rich and the poor, the great and the insignificant, all are alike liable to sustain injuries from unforseen accidents. When this is the case, it often happens, that in the multitude of conflicting interests affected by a sudden calamity, it is very difficult to properly adjust the rights and apportion the losses sustained. Courts of Justice are often invoked to lend their assistance, and by the wisdom of their deliberations and the uprightness of their decisions to bring order out of chaos. We are led to these remarks by the case of McConihe *vs.* The New York and Erie Railroad, decided by the New York Court of Appeals.

The action was to recover damages upon a contract made between Mallory, the plaintiffs assignor and the defendant in December, 1849, by which Mallory was to furnish materials and build fifteen lumber cars for the defendant, for four hundred and seventy-five dollars per car. The contract was subsequently so modified that the company agreed to furnish for the cars iron boxes of a peculiar model manufactured by the company; the expense of the boxes to be taken from the price of the cars.

One four-wheel car was to be completed in thirty days, and one on each day thereafter till the whole number should be completed. Mallory commenced the work immediately, and at a great expense selected and purchased the materials (except the boxes) expressly for the cars. Mallory set up seven of the cars and had the work ready to set up the others; and those set up were completed as far as it was possible without the boxes which the company neglected to furnish. The company did not manufacture the boxes but they were and could be made only by a man who was in the employment of the defendant. Had the company furnish the boxes all the cars could have been completed by the 1st of March, 1850, but in fact were not. The labor as far as proceeded with was performed at great inconvenience in consequence of the boxes not having been furnished. Mallory expended for materials for the cars and in labor upon construction, &c., the sum of $2,159,04. He was unable to obtain insurance upon the materials and property, from the 1st of March, 1860, to the 18th May following, the cars remained in this condition, while Mallory was repeatedly urging the company to furnish the boxes. On the 18th of May, 1850, without any carelessness of Mallory, all the cars and materials except the iron wire, were consumed by fire, and the iron wire materially injured. After the fire Mallory used such portion of the iron as was available in working cars for the company. Mallory was prevented from completing the special contract by the failure of the defendants to furnish the boxes.

Upon the facts as we have thus stated them, judgment was given to the defendant by the Supreme Court, from which judgment the plaintiff appealed to the Court of Appeals. The following is the opinion of the Appelate Court.

GLOVER J. The Court at general term found the fact that Mallory would have completed the cars had he not been prevented from so doing by the failure of the company to furnish the boxes, therefore according to agreement. Had this been a contract for work and labor to be performed by Mallory for the defendant and he had been prevented from completing the contract by a failure of the defendant to perform on its part, he would have been entitled to recover for what he had done under contract. That is not this case. Mallory agreed to build for the defendant fifteen lumber cars from materials furnished by him, except the boxes, which the defendant agreed to furnish and the expenses of which were to be deducted from the price of the cars. This was in effect an agreement for the sale of the cars, thereafter to be constructed by Mallory to the defendant and did not vest any property in the defendant, until the cars were completed and delivered. It then follows that the cars set up and the materials furnished for those not set up were the property of Mallory at the time of their destruction by fire. The rule is that the party in whom the title to property is vested must bear the loss in case of destruction by the fire. This rule is not questioned by the Appellant and it is unnecessary to cite the case establishing it. The defendant cannot be held liable to the plaintiff for the value of the property destroyed upon the ground that the title had been transferred by Mallory to the company. The ground of liability of the defendant, for the property destroyed if any is that the failure to furnish the boxes according to agreement prevented Mallory from completing and delivering the cars, and rendered it necessary for him to keep the property on hand and until it was destroyed by fire. But this was not the necessary consequence of the failure to deliver the boxes. Mallory might have rescinded the contract and proceeded at once for his damages. The cars and materials would have remained his property and he could have recovered from the defendant the contract price for the cars, deducting therefrom what it would have cost to complete them, and the value of the materials provided for the cars in the condition they then were. But Mallory was not obliged to take this course. He could insist upon completing the cars and the defendant could not object to the delay so long as that delay was occasioned by the neglect of the company to comply with the agreement on their part. The plaintiff in this case had not put an end to the contract. The Court find that he had repeatedly called upon the company to furnish the boxes up to the time of the fire. The contract continued in force between the parties to that time. The fire was accidental and had no connection with the defendant's breach of contract; they are therefore not responsible therefore. Had the defendant delivered the boxes on the 1st of May preceding the fire, and had Mallory proceeded to finish the cars pursuant to the contract and while so preceding the fire had accrued, I presume no one would have insisted that the defendant was liable for the loss. I do not see that this case differs in a legal view from the one supposed. Mallory was calling upon the company for the boxes to enable him to complete the cars, electing to continue the contract in force. This disposes of the substantial rights of the parties.

The fact is found that no specific damages were proved to have resulted from the delay of the company in delivering the boxes. The plaintiff proved, and he fact is found that the defendant violated his contract. The plaintiff was therefore entitled to nominal damages, judgment should have been therefore given to the plaintiff. No important right is effected by the judgment. The plaintiff, had jungment been given for a nominal sum would have been subjected to costs. The verdict was subject to the opinion of the Court. This Court should give such judgment as the Supreme Court ought to have given. I think this a proper case for the application of the maxim that the law does not regard trifles and that judgment should be affirmed.

Population of Boston.

The population of this city is 177,902, being an increase of 15,155 since 1855. The statement by wards is as follows:

Wards.	1860.	1855.

Total	177,902	162,748

Detroit and Milwaukee Railroad—Foreclosure and Re-organization.

A decree for the sale, under foreclosure, of the Detroit and Milwaukee Railroad has been granted by the Courts, and arrangements for capitalizing the debt of the concern are nearly concluded. The re-organization contemplates the securement of four classes of creditors: First, the first and second mortgage bondholders, who represent claims to the amount of $4,250,000 which will be recognized by the new company, and will remain as a funded indebtedness against them; second, the third and fourth mortgage bondholders, whose claims amount to $1,250,000, which will be converted into preferred stock, bearing 7 per cent. interest; third, the creditors under the head of floating debts, whose claims have accrued since the third and fourth mortgages were executed, and the road placed under the management of the Great Western Railway Company, representing about $1,250,000, which will be exchanged for preferred stock bearing 7 per cent. interest; and fourth, the old stockholders, representing shares to the amount of $2,250,000, which will be exchanged for ordinary stock in the new company at the rate of 20 cents on the dollar. The completion of this arrangement, which is now about perfected, will make the debtor side of the account of the road read as follows:

Ordinary stock	$ 450,000
Preferred stock, bearing 7 per cent	2,500,000
First mort. mostly bearing 7 per cent	3,250,000
Second mortgage bearing 10 per cent	1,000,000
Total	$7,200,000

The annual earnings required to pay the interest over and above running expenses, repairs, &c., will be $502,500.

Tennessee and Alabama Railroad.

The following is a statement of the earnings of this road for the two fiscal years ending June 30th, 1859, and June 30th, 1860:

	1859.	1860.
From passengers	$44,488 49	$71,959 23
" freight	2,206 17	52,129 56
" extra baggage	947 75	1,186 98
" mails	29,338 48	2,421 81
" sundries	148 68	256 86
Total earnings	$75,129 57	$127,952 91
Total expenses	27,550 11	40,709 45
Net earnings	$47,579 46	$87,243 46

	1859.	1860.
Per centage for expen.	37 per cent.	32 per cent.
" " net earning.	63 per cent.	68 per cent.
Gross earnings in 1860 over 1859		$52,823 34
Net gains in 1860 over 1859.....		39,664 00

☞ The survey of a new railroad route connecting the Indian Springs with the Macon and Western R. R., Georgia, has just been completed.

OFFICE OF THE MOBILE AND OHIO R. R. Co.,
Mobile, Sept. 8th, 1860.

PROPOSALS addressed to the undersigned, will be received until 20th October next, for furnishing first-class **SLEEPING CARS** for through trains on this road.

The Proposals must state the name of the patent, under which the Cars will be constructed, the time they can be delivered, and the price at which the Company can purchase them—including the Patent right to use the same—at the expiration of one or two years, after date of delivery on the road.

L. J. FLEMING,
5t38 Chief Eng'r and Gen. Sup't.

TEN WHEEL LOCOMOTIVE
NOTICE TO RAILROAD COMPANIES.

WHEREAS Letters Patent of the U. S. have been issued to SEPTIMUS NORRIS for the Ten Wheel Locomotive Engine, having six driving with two, or four truck, or guide wheels, RAILROAD CORPORATIONS AND BUILDERS of Locomotives, will take notice that RICHARD NORRIS & SON, of Philadelphia, having taken a license, are the only persons as yet authorized to build or use said patent. BUILDERS and COMPANIES purchasing elsewhere (unless by special license,) render themselves liable for **INFRINGEMENT of PATENT.** Particulars concerning terms, may be had of

OCTAVUS J. NORRIS,
AGENT FOR THE PATENTEE,
3m38 **1802 Spruce St., Philadelphia.**

ANALYTICAL AND Manufacturing Chemistry,
No. 24 WILLIAM STREET,
Rooms Nos. 28 & 29. NEW YORK.

CAREFUL Analysis made of all Minerals and Commercial Articles. Surveys and Reports made upon Mines and Quarries. Coal Oil Works planned and erected and contracts made. The best modes furnished for manufacturing, purifying and deodorizing oils from coals, petroleum, and other bituminous substances. Coal Oils tested and purified. Superintendents and skilled workmen furnished to manage Coal Oil Works and Mines. The Kerosene patents from which originated the Coal Oil Business of the United States were granted to Dr. GESNER.

GESNER'S, Chemists & Engineers.

BALLARD'S PATENT CLAW JACK SCREWS,
MANUFACTURED AT
No. 7 Eldridge Street, near Division,
NEW YORK.

LARGE and small **CLAW JACKS** for BRIDGES, RAILROAD and BOILER BUILDERS, SHIP BUILDERS, STONE QUARRIES, and **various other kinds,** for different purposes.

J. MURRAY, JR., ARCHITECT & BUILDER,
No. 3 CEDAR STREET,
(Near Pearl), **NEW YORK.**
STORES AND OFFICES FITTED UP.

CAR DUCK.
HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, 11 to 140 inches, PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.

For sale by

WILLIAMS & PAGE,
67 Water st., Boston.

PROTECTION AGAINST THIEVES.
THE PATENT PREMIUM INSURANCE DOOR BOLTS,
PECULIARLY adapted to all doors where safety is required are unequalled for strength, and pronounced by judges **BURGLAR-PROOF.** This is not the Door Fastener carried in the pocket. Manufactured by

HENRY BURT,
No. 11 Newton st., Newark, N. J.

For sale at Clough's Yankee Notion Depot (221 Pearl st.). **New York,** and by the trade generally.

RAILROAD IRON,
52 LBS. per yard, at New York and Hampton Roads, Va., and a market.

The attention of Companies requiring Rails is asked to the above cargoes of Superior Welsh make, to arrive in September.

NORRIS & BROTHER, Baltimore,
4t35 and **46** Pine st., New York.

RAILROAD IRON AND SPIKES.
500 tons 58 lbs. Rails of superior quality.
1,000 tons 54 lbs. do. do.
1,000 tons 50 lbs. do. do.
in port and to arrive, and
300 tons ½ inch and 9-16ths inch Spikes for sale by

MEAD & BELL,
1m33 **13 Cliff Street.**

PHILIP F. PASQUAY,
25 SPRUCE STREET, NEW YORK,
MANUFACTURER OF SUPERIOR OAK TANNED STRETCHED
LEATHER BELTING.

THESE BELTS are cemented and riveted together to any length that may be required, and warranted to run straight on the pulleys.

Best quality of **LACE LEATHER** constantly kept on hand. Also dealer in **VULCANIZED INDIA RUBBER GOODS,** viz.:—CROTON and STEAM HOSE of all sizes, STEAM and PISTON PACKING.

List of Prices can be obtained at the store. In comparing the List of Prices with those of other manufacturers, it is necessary to compare also the Belting, the difference no doubt will give it in favor of my manufacture.

CHARLES A. SEELY, CHEMIST,
424 BROADWAY, NEW YORK.

ANALYSES of Ores, Minerals, Articles of Commerce, etc. Advice and Instruction in Chemical Processes generally. **Advice on Chemical Patents.**

WILLIAM H. BERRYMAN, Commission Iron Merchant,
No. 38 HARRISON STREET,
And 335, 337 & 339 Washington St.,
NEW YORK.
DEALER IN BOILER PLATE AND RIVETS.
TANK, ANGLE AND BAR IRON,
SMOKE PIPE, BOILER TUBES, ETC.

NEW YORK MACHINERY DEPOT.
STEVENS, BROTHER & CO.,
222 PEARL ST., NEW YORK,

MANUFACTURERS and DEALERS in every description of STATIONARY and PORTABLE **STEAM ENGINES and BOILERS.** WOODWORTH'S PLANERS, and all other WOOD WORKING MACHINES

LATHES, PLANERS, DRILLS,
LEATHER & RUBBER BELTING,
BABBIT AND OTHER COMPOSITION METALS,
With all other articles needful in a Machine Shop.

SOLE MANUFACTURERS OF
"D. DICK'S" Celebrated Anti-Friction
Shears, Punches & Presses,
HARRIS' PATENT SIFTING MACHINES,
JEFFREY'S DOUBLE-ACTING BALL VALVE PUMPS,
PORTABLE SCALES IN GREAT VARIETY,

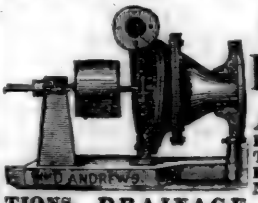
11. " 18 "		¾ to 1	24. " 34 "		1½ to 1
12. " 18 "		1 to 1			

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.



Sent, **free by mail,** in separate sheets, at **25c. each;** or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT Centrifugal PUMPS

ARE the best and cheapest Pumps made for **RAILROAD STATIONS, MINES, FACTORIES, TANNERIES, PLANTATIONS, DRAINAGE, IRRIGATION, WRECKING,** and general use.

Made entirely of metal, without working valves or rubbing surfaces, they pass sand, fine ore and gravel, without injury. Capacity from 20 Galls. to 1,000 Bbls. per minute.

For descriptive pamphlet and Price List address

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every departme..t of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dus'; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER,** 104 Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 42 Pine st., New York City.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

New Madrid, Indian Ford and Pilot Knob Railroad.

We learn from the St. Louis *Republican* that an arrangement has been concluded with Henry Flad, Esq., C. E., of Ironton, to survey and locate the New Madrid, Indian Ford and Pilot Knob Railroad.

This road is intended to commence at a point on the Mississippi river, opposite Hickman, Ky., and to run thence, via New Madrid, and the Indian Ford, to the Pilot Knob. When completed, it is intended to form a part of the St. Louis and Iron Mountain Railroad, and will be in part an extension of it to the Mississippi river, at New Madrid and Hickman, thus connecting St. Louis with the railroad system of Tennessee, Kentucky, North and South Carolina, Georgia, Alabama, Mississippi, Louisiana and Florida. This, the *Republican* says is the shortest route to the Mississippi river, tapping it, as it does, at a point below all serious obstructions to navigation from low water in summer or fall, or freezing weather or running ice in winter; and for many other reasons the most practicable route, and most to be desired by the citizens of St. Louis, and a large majority of South-east Missouri.

New York and Erie Railroad.

The *New York and Erie Railroad Company* was chartered on the 24th April, 1832. The work of construction was commenced on that portion of the Delaware Division, between Delaware and Callicoon Creek, a distance of 41 miles; and also upon the 10 miles nearest Piermont in 1836. To aid the work, the Legislature, at its session in 1836, granted to it the credit of the State to the amount of $3,000,000, but upon terms that could not be complied with by the company; in consequence of which, and of the commercial revolutions which followed, the work of construction was suspended for the next two years.

In 1838, terms of the State loan were so modified as to allow the company to draw it in sums of $100,000 each, provided equal amounts were first collected from the stockholders and expended on the road. Up to Sept., 1839, $300,000 had been collected and expended, and an equal amount of the State loan rendered available, from which the company realized only $245,225—the State bonds (4½ per cent.) selling at a discount of 18½ per cent. in addition to commissions.

In 1839, the unlet portion of the road from Piermont to Goshen was put under contract; and in Feb., 1840, the Susquehanna Division, between Binghamton and Hornellsville. In 1840, the terms of the State loan were further modified so as to allow $100,000 of the same to be drawn for every $50,000 collected from the stockholders, and expended on the road. Under this arrangement, the balance of the State loan was made available, and the work prosecuted upon the Delaware, Susquehanna, and Western Divisions; in all about 300 miles.

In Sept., 1841, the first section of the road from Piermont to Goshen, 46 miles, was opened for use. About this time the company became again involved in financial embarrassments, which resulted in placing the road in the hands of assignees, under whose management it was extended to Middletown, 7 miles west of Goshen, on the 7th of June, 1843; after which the work was again suspended.

The sums expended up to 1st Feb., 1844, were as follows:

Received from capital stock	$1,501,830
Proceeds of State loan	2,599,514
Interest on same	39,942

Rents	2,928
Donations	362
Earnings prior to assignment	18,559
Indebtedness of the company	573,814
Total	$4,736,949

Of this amount only about $2,000,000 became subsequently available to the company, the balance being expended in interest, and in work abandoned; a portion of this being the *piling* on the Susquehanna Division, and grading on the Western.

At this juncture a renewed effort was made to prosecute the work. The company's engineer estimated the amount necessary to be expended to complete the road to Lake Erie and equip it, at $7,000,000. In 1845, by an act passed on the 14th of May of that year, the State agreed to release its claim, which constituted by law a first mortgage on the road, provided the company should complete the entire line to Lake Erie in *six* years from that time. As a further inducement to additional subscriptions to the stock of the company, the old stockholders agreed to surrender one-half of the stock held by them, provided new subscriptions to the capital stock to the amount of $3,000,000 should be obtained; a sum, with an equal amount of bonds, to be issued, believed to be sufficient to complete the road; authority having been granted for the issue of such bonds, to take precedence of the State loan, provided the terms of the act referred to were complied with.

Prior to its re-organization in 1845, its liabilities were as follows:

State loan	$3,000,000
Floating stock	65,571
Six per cent. certificates	265,515
Seven per cent. certificates	163,146
Stock (surrendered)	742,100
New stock from old	917,601
Bills payable	2,954
Old stock not surrendered	12,400
Total	$5,169,287

Upon the re organization of the company, these liabilities were reduced so as to stand as follows:

New stock	$742,100
Seven per cent. certificates	503,868
Outstanding liabilities	14,215
Cash paid on old accounts	101,433
Total	$1,361,616

—relieving the company of liabilities to the amount of $3,807,671.

Although the company was relieved for the present of pecuniary embarrassments, a question of location arose which delayed for some time the commencement of construction west of Otisville, the point of divergence between what was termed the *interior* route through Sullivan county and the route up the Delaware River. The surveys which had been made, showed the latter to be the *best* route. A portion of this lay in the State of Pennsylvania, which the company, by its charter, was forbidden to enter. The charter was subsequently, (in 1847), modified in this particular, and permission obtained from the State of Pennsylvania to traverse a portion of its territory on the payment of the sum of $10,000, annually. Upon the removal of these obstacles, the work of construction was vigorously prosecuted, and continued without interruption till its completion to Lake Erie—the several sections being opened at the following dates, viz: On the 3d Nov., 1846, from Middleton to Otisville, 8 miles; on the 6th Jan., 1848, from Otisville to Port Jervis, 13 miles; on the 28th Dec., 1848, from Port Jervis to Binghamton, 127 miles; on the 1st June, 1849, from Binghamton to Owego, 22 miles; in October of the same year to Elmira, 36½ miles; on the 1st Jan., 1850, from Elmira to Corning, 17 miles; on the 3d Sept., 1850, from Corning to Hornellsville, 41 miles; and on the 22d April, 1851, the whole line from the Hudson to the Lake, 446 miles. The Newburg Branch was opened in 1850.

The Union Railroad is a short branch connecting the main line of the road in New York with the Paterson and Ramapo, and Paterson and Hudson Railroads in New Jersey. It was built under a separate charter, and leased to this company, in perpetuity, on the 10th day of Sept., 1852, at an annual rent of $3,500.

The Paterson and Ramapo Railroad is leased in perpetuity to the New York and Erie Railroad Company; its owners to receive as rent for the same $26,500, payable on the 1st January and 1st July. Date of lease Sept. 9th, 1852.

The Paterson and Hudson Railroad is also leased to the New York and Erie Railroad Company in perpetuity; its owners to receive as rent for the same $45,600, payable half-yearly, on the 1st Jan. and 1st July. Date of lease Sept. 9th, 1852.

These two roads were constructed before the Erie Company obtained permission to make its terminus at Jersey City, and their adoption was necessary in order to avail themselves of this privilege. The trains of the New York and Erie Company run on the New Jersey Railroad for a distance of about two miles in Jersey City, an addition rail having been laid down for the accommodation of the broad gauge of this company.

The Chemung Railroad is leased for a period of 20 years, from the 1st of Jan., 1859, at an annual rent of $30,000, payable half-yearly, in New York.

The Elmira, Jefferson and Canandaigua Railroad is leased for a period of 20 years, from the 1st day of Jan., 1859, at an annual rent of $25,000, payable half-yearly, in New York.

For the use of the "Bergen Cut" the company pays to the New Jersey Transportation Company, (by which it is owned,) 12 cents per ton for every ton of merchandise passing through it, and 6 cents for every passenger coming from any point *east* of Sufferns Station, and four cents for every passenger from *west* of that station. The aggregate amount of the payments made to this company is about $30,000 annually.

The company also pay $2,800, annually, on account of widening the "Cut;" and $5,000 annually for the use of land leased of the Paterson and Hudson Railroad Company at Jersey City.

Long Dock.—The Long Dock is the name of the improvement designed to connect the lower portion of the road with the Hudson River at Jersey City, (for which purpose the road of the New Jersey Transportation Co. is now used,) by a tunnel and railroad (2½ miles), through Bergen Ridge, and by docks and piers at Jersey City. The improvement has nominally been carried forwarded by a company incorporated, under the above title, by the State of New Jersey. The capital stock is $800,000, (which is fully paid). The company has also authority to purchase and hold lands, and improve the same by the erection of buildings, the construction of streets, dock wharves, etc., etc.; to establish a ferry between the property purchased and the City of New York; to issue bonds, bearing 7 per cent., secured by a mortgage of the property, but not to be sold at less than 10 per cent. below their par value. Under this organization, purchases of real estate were made, amounting in value to $773,440, on which about $450,000 is still unpaid. As the improvement was designed for the accommodation of the Erie Railroad, a lease was executed of the same, on the 1st day of July, 1856, by which the New York and Erie Railroad Company agreed to pay a rent equal to 10 per cent. on the stock of the company—the payment to be made half-yearly on the 1st of Jan. and July; the interest on any sum or sums expended on account of the purchase of lands to be taken as part of the rent. Under this organization and assignment, the New York and Erie Railroad Company has advanced the sum of $341,300, which has been invested in the stock of the company; also the sum of $123,027 by way of rent; and also the further sum of $644,511 in payment for work done on the tunnel, docks, etc., etc. The tunnel is nearly completed. Its length is 4,380 feet. A large amount of work yet remains to be done on the docks to prepare them for use. The annual charge on account of the stock not owned by the company is $45,870, payable half-yearly, on the 1st days of June and December.

The total expenditures on account of the improvement up to the 1st Jan., 1860, was about $1,500,000.

The New York and Erie Railroad Company has the right of becoming the purchasers of all the property of the Long Dock Company, on the payment thereto of the full amount of the capital stock of this company, and assuming its liabilities, at any time after the 1st Jan., 1862, on giving twelve months notice of such intention.

The Long Dock Company has executed a mortgage upon its property as security for an issue of bonds to the amount of $500,000, bearing 7 per cent. interest, dated Aug. 15, 1857, and payable 1st June, 1882, for the purpose of raising money to carry forward the improvement. Interest payable 1st of June and Dec. Of these bonds about $100,000 have been issued.

In addition to the real estate necessary to the use of the road and for the construction of piers, docks, etc. The Long Dock Company own about 3,000 lots at Jersey City, measuring 25 by 100 feet.

CAPITAL STOCK—Authorized and paid in, $11,000,000.

FUNDED DEBT—$25,362,505: in detailed as follows:

1st Mortgage, 7 per cent coupon bonds..$3,000,000—dated 1st May, 1847, and payable 1st May, 1867; interest payable semi-annually, 1st May and 1st Nov.

2d Mortgage, 7 per cent. coupon bonds..$4,000,000—dated 1st March, 1849, and payable 1st March, 1859; interest payable 1st of March and 1st of Sept. This class of bonds was not paid at maturity. The company propose to extend the same for a period of five years, and have issued, and are prepared to issue, coupons, (entitling the holder to interest at the rate of 7 per cept. per annum) to cover the period named. Issues of Coupon Sheets have been made to holders of bonds to the

amount of $2,700,000. The interest on this class of bonds remains unpaid since and including Sept. 1st, 1859.

3d Mortgage, 7 per cent. coupon bonds. $6,000,000 —dated 1st March, 1853, and payable 1st March, 1883; interest payable 1st March and 1st Nov. The mortgage in this case provided for an issue of $10,000,000—$4,000,000 being retained to retire the Second Mortgage bonds as they fell due, and which are still held, the company having been unable to sell them at satisfactory rates. The interest on this class of bonds remains unpaid since and including 1st Sept., 1859.

4th Mortgage, 7 per cent. coupon bonds. $3,729,000 —dated 1st Oct., 1857, and payable 1st Oct., 1880; to be presently due in case of failure to pay the interest on the bonds 6 months after due and demand; interest payable 1st Oct. and 1st April. The mortgage in this case provided for an issue of bonds to the amount of $6,000,000. About one-half the interest due 1st April, 1859, and all since that date remains unpaid. These bonds were issued for the purpose of retiring to convert the same into this class of bonds at *par*. Holders of unsecured bonds were also entitled to purchase them, paying one-half in *cash* and one-half in Unsecured Bonds. No bonds of this class have been issued except in pursuance to these provisions.

5th Mortgage, 7 per cent. coupon bonds. $1,277,000 —dated 1st June, 1858, and payable June 1st, 1888; interest payable 1st of June and 1st Dec. The mortgage in this case provided for an issue of bonds to the amount of $4,000,000. This class of bonds were issued to the holders of the Unsecured Bonds, who, on subscribing for *Fourth* Mortgage Bonds, and paying therefor in the manner stated, were entitled to convert Unsecured Bonds, equaling in amount half of such purchases, into *Fifth* Mortgage Bonds. All the bonds of this class have been issued in accordance with this provision. The interest thereon remains unpaid since and including 1st June, 1859.

Convertible Bonds of 1851..... $2,618,000 —dated 1st Feb., 1851, add payable 1st Feb., 1871; interest payable 1st Feb. and 1st Aug. The total issue of these bonds was $4,351,000. The interest on these bonds remains unpaid since and including 1st. Feb., 1858.

Convertible Bonds of 1852..... $2,443,000 —dated 1st Jan., 1852, and payable 1st Jan., 1862; interest payable 1st Jan. and 1st July. The total issue in this case was $3,500,000. The interest on these bonds remains unpaid since and including Jan., 1858.

Sinking Fund Bonds of 1855..... $2,193,500 —dated 1st Feb., 1855, and payable 1st Feb., 1855, and presently, in case of non-payment of Sinking Fund; interest payable 1st. Feb. and 1st Aug. The total issue in this case was $4,000,000. The interest on these bonds remains unpaid since and including 1st Feb., 1858. This class of bonds was issued to take up what were termed Income Bonds, dated 1st Feb., 1850, and payable 1st Feb., 1855. It provided for a *Sinking Fund* equal to $35,000 monthly, to be invested in the bonds. The contributions to the fund were regularly made up to October, 1857, when they ceased. The amount of bonds retired by the operations of the Sinking Fund have been $1,462,000.

The conversion of Unsecured Bonds into 4th and 5th Mortgage Bonds accounts for the difference between the amounts outstanding, and the original issues.

Seven per cent. certificates..... $26,505 —These are outstanding obligations convertible at the pleasure of the holder into 4th Mortgage Bonds bearing 7 per cent. interest. Interest paid.

Acceptances due in 1860..... $10,000 —dated in 1850, and payable 1st Feb., 1860. They were given for real estate in Newburg, purchased on account of the Newburg Branch. Interest paid.

The amount of overdue interest at the close of the fiscal year was $1,207,987; of which $684,687 was interest on mortgage debt, and $523,300 on the unsecured debt.

FLOATING DEBT—$2,074,795, as follows—

Bills payable	$ 313,703
Accounts payable	506,291
Unpaid coupons	1,207,987
Small accounts	23,643
Rent Chemung Railroad	2,500
Rent of Union Railroad	20,850

MEMORANDUM.

Gross earnings for year ending Sept. 30, 1859		$4,482,149
Transportation expenses	$2,974,227	
Expenses 1858 paid 1859	32,880	
Hire of cars	1,264	
Taxes	68,941	
		3,077,312
Net earnings		$1,404,837

Interest on Mortgage Debt ..	$1,176,484
" Unsecured " ..	567,867
" Floating " ..	39,877
Rent of Union Railroad	83,400
" Chemung "	31,500
" Elmira, Jefferson & Canandaigua Railroad . ..	16,796
	$1,915,424
Deficit	$510,587

On the 16th of August, 1859, at the suit of the Fourth Mortgage Bondholders for the foreclosure of this mortgage, a Receiver was appointed to take charge of the road and its effects. He was directed to pay, in the first place, all arrearages due employees of the road; also for supplies used in operating it; also all other charges incident to ts protection and maintenance, and to hold the net earnings subject to the order of the Court. There were received by him from earnings and other sources, up to 1st Jan., 1860, $2,424,452. The payments in the meantime were as follows:

Payments on account of interest on First Mortgage Bonds	$207,270
Do. on account of current expenses, arrearages, etc., etc.	2,145,007
Do. on account of judgments against the Company	45,000
Cash on hand January 1st, 1860	27,175
Total	$2,424,452

The following proposition has been made for adjusting the affairs of the Company:—To capitalize the Unsecured Bonds, with the interest due on the same, and for two years in advance, into a *Preferred* Stock, bearing 7 per cent. interest; the 1st Mortgage bondholders to extend the term for the payment of their coupons to March 1st, 1860; the 2d Mortgage to Sept., 1860; the 3d Mortgage to March, 1861; the 4th and 5th Mortgages to Dec. 1st, 1861. In case of foreclosure, the same relations between the different classes of bondholders and stockholders to be preserved.

In the meantime it is expected that the net earnings will discharge the liabilities of the Company, the overdue coupons, and supply the means for the completion of the Long Dock, (estimated at $500,000).

Upon the re-organization, on the plan proposed, its capital account will stand as follows:

Common Stock	$11,000,000
Preferred seven per cent.	8,911,000
1st Mortgage Bonds	3,000,000
2d " "	4,000,000
3d " "	6,000,000
4th " "	3,700,000
5th " "	1,253,000
Total	$37,864,000

GENERAL LEDGER BALANCE SHEET, 30TH SEPT., 1859.

Average.	103,927	113,995	197,584	790,028

NOTE.—The total amount received for passenger transportation for the period embraced, (eight years,) has been $11,914,272; and for freight, $27,125,416, which is at the rate of $1.07 for the former, and $2.32 for the latter per mile run by trains. These rates would be slightly increased by adding receipts from mails and miscellaneous sources. The average receipts for passengers has been $0 01.92 per passenger per mile, and for freight, $0 02.29 per ton per mile.

The division of passengers into "through" and "way" for the year 1859 is estimated, the detailed statement of the passenger traffic for the year not having been made up.

NOTE.—By the terms of the re-organization in 1847, interest at the rate of 6 per cent. was agreed to be paid on the shares till the road was opened to Lake Erie.

The dividend in 1857, 10 per cent. was paid in *stock*.

In the table, only the cost of the completed portions of the road, while it was in progress, is given.

Journal of Mercantile Law.

PHILANTHROPIC BUILDING ASSOCIATIONS; USURIOUS CONTRACTS WITH; A BORROWER MAY RECOVER BACK A SUM PAID FOR USURIOUS INTEREST.

The usury laws were undoubtedly enacted in a spirit of kindness towards borrowers, and designed to protect them from the soulless contracts which their necessities might lead them to enter into with unprincipled capitalists. Whether they are, upon the whole, productive of more good than evil may be still a question with many; but they have received the warm endorsement of too many wise legislators, and been approved by the wisdom of too many learned jurists to be easily set aside. Not many years ago there were quite a number of philanthropic building associations started in many cities of the Union for the purpose of accumulating the funds of mechanics, and then lending them out to those members of the association that would pay the highest interest for the amount borrowed. If borrowers were always sure to use the highest wisdom and the best economy in their investments it might be safe to calculate that a borrower who pays 20 per cent. for his money will probably make 25 per cent. upon it, in which case it is a paying transaction; but as the average of mankind fail to use the highest wisdom and the best economy, institutions whose prosperity is based upon the success of such enterprises very naturally, after a time become bankrupt. More than this, the man who finds his enterprise a failure, and himself saddled with an enormous debt of interest is apt to feel as though he was the victim of a species of injustice, and hence a bargain begun in good faith, ends in an appeal to the courts, either for relief by the one or for a compulsory decree by the other.

On the 23d of June, 1854, one McKnight was the holder of five shares of stock in the Philanthropic Savings, Loan and Building Association and the successful bidder for a loan of $1,000 at a premium of 28 per cent. He received from the defendants the sum of $720, executed to them a bond and mortgage in the sum of $1,800, and transferred his five shares of stock as collateral security.

On the 9th of August, 1858, he notified the company of his desire to pay off his loan and discharge the mortgage. A settlement was accordingly had between the parties, in which the mortgage was estimated at $900, and the company agreed to take the plaintiff's stock at the sum he had paid in on account of it; the balance amounting to $574 07 he paid in cash, and satisfaction was entered upon his mortgage. He subsequently brought a suit in the District Court of Philadelphia to recover back the difference between the sum of $720 with legal interest, and the amount actually paid to the company. He obtained a verdict and judgment for $339 99 as the amount over-paid in usurious interest, from which judgment the Company appealed to the Supreme Court. The following is the opinion of the Appellate Court.

STRONG, J.—That the payment of usurious interest is not a voluntary payment in any such sense as to entitle the receiver to retain the sum paid above legal interest, is too well settled to admit of doubt. The money is paid under the constraint of a formal though illegal contract. That contract itself was obtained by oppression by taking advantage of the necessities of the borrower, and, of consequence, so was the usurious interest paid under it. The early disposition of the English courts was to deny the right of a party paying such interest to recover back any portion of the money paid, for the reasons that both parties to such a transaction were deemed to be "*in pari delicto*" and the excess of interest was regarded as paid voluntarily, so that the maxim "*volenti not fit injuria*" would apply. The authority of this decision, however, was soon questioned. Lord Mansfield declared that the case had been denied a thousand times. At a later date a distinction was taken between transactions under statutes enacted on grounds of general policy, where each party violating the law is held to be equal in fault, and transactions under the usury laws, enacted to protect weak and needy men from being defrauded and oppressed. To the latter the law does afford relief. It regards the lender on usury as an oppressor, and borrowers as the injured and oppressed. And in none of the cases do we discover that any other evidence of duress or oppression has been held to be necessary, than such as is involved in the act itself of taking the money under usurious contract. The principles of the statutes of usury seem to be, that the lender alone is the wrong-doer, and that the borrower is his victim. In this case, the jury were instructed that the plaintiff could recover whatever he had paid to the defendants (on account of principal, instalments, interest, fines or otherwise) over and beyond the sum of $720 originally lent and six per cent. interest thereon, and this even though the plaintiff, before his mortgage became due and could be demanded, proposed to the defendant to pay it and withdraw his stock; and although a settlement was had accordingly, and the mortgagee was satisfied. By the true withdrawal of the stock it is to be understood not that stock was returned to plaintiff, for none ever was, but that he should cease to be a stockholder. In effect the transaction was an extinguishment of stock. The parties agreed to treat with each other simply as debtor and creditor. Now how is it possible, that the fact that the settlement was made before the mortgage became due and payable can change the nature of the transaction? It still remains, that the security which had been exacted was for a greater amount than the sum actually lent. The settlement and payment, therefore, were under the constraint of an usurious contract, and, consequently, the "taking" the money was itself usurious, whether before or after the day of payment fixed in the mortgage. Nor can the character of the "taking" be changed by the fact that the defendants accepted a smaller amount of usurious interest than they would have received, had they exacted all that the mortgage called for. Then, what is there in the withdrawal of the stock, in other words, its extinction, more than an application of the amount paid upon it toward the satisfaction of the debt? Certainly the defendants cannot say, after having taken an assignment of the stock as collateral security for the payment of the plaintiff's bond and mortgage, that its value was less than the amount of money paid to them upon it. When, therefore, he relinquished to them all his legal and equitable ownership; when he gave to them the benefit of all the payments he had made upon it, it is not easy to see why he is not to be credited with the amount of those payments towards the discharge of his debt. The stock may have been worth more than that amount. It could not have been worth less. The charge to the jury in this respect was, therefore, unexceptionable, and it was in entire harmony with what was said in Kupfert *vs.* the Guttenberg Building Association and Hughes's Appeal.

We think also, the court was right in refusing to charge the jury that there was evidence from which they might infer that the arrangement made and consummated between parties was a sale of the stock to the defendants for the balance of the mortgage loan, after deducting all direct payments for principal and interest. We are unable to find any evidence which would warrant such an inference. A withdrawal of the shares, not a sale, was the thing proposed and assented to. Nothing more was intended, nothing more was done. Judgment affirmed.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

American Railroad Journal.

Saturday, September 29, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

Advance in Railroad Securities.

The steady advance in the price of railroad shares is still the all engrossing theme. The degree of this advance indicates an entire change in the public conviction. Only a few months since, Erie shares were a drug in the market at 5 per ct. on the dollar, and almost entirely ceased to be dealt in at that. They were by common consent condemned as entirely worthless. They are now selling at an advance of some 850 per cent. over the lower point touched. In the meantime no fact affecting their value has transpired that could not be readily foreseen, with the exception, perhaps, of the probable construction of the Atlantic and Great Western Railroad. But the completion of this, like all new undertakings of great magnitude, is yet problematical, and cannot have exerted any considerable influence in promoting the upward movement. Nothing less than a return of prosperous seasons could be naturally expected. The anticipated completion of the Long Dock is no new affair. The effect of its influence should have been discounted long ago.

Such excessive changes indicate a degree of levity in the public mind entirely incompatible with any well founded notions upon the subject of Railway economy. The most extravagant assumptions are constantly dealt in with no other reason than that they are necessary to justify any caprice that may seize the public mind, or to establish any preconceived fancy of opinion.—For instance: the Erie R. R. earned from the transportation of freight in 1856, $4,545,782, moving 183,458,046 tons one mile. The rate of gross earnings was 2.48 cents per ton, per mile. In 1859, 197,127,039 tons of freight were moved one mile.

The receipts from this source were 3,195,869: the rate per mile, 1.62 cents. The total net earnings for 1856 were $2,712,152; in 1859, $1,273,141. The per centage of net earnings in the former case were about 43 per cent.; in the latter 28 per cent, showing a falling off of 15 per cent. This deficiency in net earnings corresponds very nearly to the rate of reduction suffered in the gross charges.

The future success of the road consequently depends *not upon the amount of the business it can do*, but upon the rate of charges it can impose. Of this fact the public mind takes not the least cognizance. This is the chain of logic adopted: "The road this year will earn $5,000,000 gross; net, 40 per cent, or $2,000,000. In 1861, $6,000,000; net 40 per cent, or $2,400,000, which is the interest on the funded debt, preferred shares, and some 3 or 400,000 more. In 1862 the road is to earn $7,000,000, and so on, indefinately. But we have shown that with the rate of charges that prevailed the past year, the road did not earn net, more than 30 per cent of its receipts. We presume the charges for 1860 have not ruled much above these of 1859. The movement of freight has probably been somewhat greater. With earnings of $5,000,000, we presume the net will not exceed $1,600,000.

For 1861 the rates may be somewhat higher than for 1859 and 1860. But the *degree* is all a matter of speculation. The Erie Canal will be fully enlarged the next year. Rival railroads on every side are scrambling for business, and it is certain that on all leading lines, the tendency of rates has been downwards instead of upwards.

We make these remarks without the slighest desire to depress the real value of any security. We should like, upon sufficient reason, to see them all at par. But when the public displays such astonishing caprice as has been manifested in Erie, it is well to disabuse it of some of the fallacies which are taken as solid causes of action, and to direct attention to those questions in railway economywhich must first be studied and understood before we can expect anything like steadiness or reason in the movements of any stock.

New York and Erie Railroad.

We give in another column, copied from the work just published by ourselves on "The Railroads of the United States," a full sketch of the New York and Erie Railroad Company, which presents its history; the relation it stands to its leased and connecting roads; to the Long Dock; the financial condition of the company, and the plans in progress for the adjustment of its affairs. Much of the matter now given is new, and all of it important and interesting—especially since Erie has again become the popular favorite. The sketch will serve as a good illustration of the general charac'or of our work.

Railway Traffic.

There has been some falling off in the movement of bread stuffs on western roads, partly under unfavorable reports from abroad, and partly from high rates of freight on the Lakes. With regard to the foreign demand there appears to be no doubt that it will continue to be active at fair rates. Such are the most reliable advices, which are borne out by the firm prices which continue to prevail in the European markets. The great roads terminating immediately upon tide-water were never doing so large a business as at present. They will undoubtedly be fully employed during the winter.

San Antonio and Mexican Gulf Railroad.

A. D. Strong, Esq., Chief Engineer of this road, in a letter dated Port Lavaca, Texas, Sept. 10, 1860, says: "The work of track-laying now progresses finely. Before 1860 closes, we hope to open the road to Victoria. The S. A. & M. G. R.R., is the most Southern and Western road in the United States, which has its Eastern terminus on Atlantic 'Tide-Water.' To day I have had the honor of riding further West on a railroad train from the Atlantic, than any other living man in the United States."

Cuban Railroads.

We invite attention to the Advertisement in another column for proposals for the construction and equipment of a short railroad from Havana to the Cerro.

English Watches.

We give in another column the Advertisement of J. H. Bradbury, Esq., sole importer of the celebrated London Watches of I. & M. T. Levitt and M. Tobias. These Watches are considered the best in the World. They are durable and reliable.

Memphis Branch Louisville and Nashville Railroad.

The cars from Clarksville, Tenn., have commenced making regular trips over the Memphis Branch of the Louisville and Nashville road as far as Allensville, a point eighty miles from the Tennessee line. The first regular trips were made on Wednesday August, 15. The track, although entirely new, is remarkable smooth, and as straight as a bird could fly. The grades are light, and it will doubtless prove one of the best and most comfortable roads in the country.

Since the above was in type, we learn that the whole of the Kentucky portion of the branch, to a connection with the Main Line at Bowling Green, has been completed, and that the cars run through from Louisville to Clarksville. The Louisville *Journal* says: "We congratulate the citizens of this city and State upon this auspicious result. The work is completed more than three months in advance of the time named, and we now enjoy the result of the efforts of the Board in a regular railroad connection with the beautiful and prosperous and spirited city of Clarksville."

Georgia Western Railroad.

We learn from the Jacksonville, Ala., *Republican*, that Mr. L P. Grant, Chief Engineer, is now engaged in making the surveys of the line for this road, between Jacksonville and Atlanta, Ga. Mr. G., recently visited Jacksonvile for the purpose of making a thorough examination of the country through which the road would probably pass. The *Republican* says:

"He came down the Terrapin creek route to Cross Plains, thence to this place, and returned the due east route. He said he found the Terrapin creek more practicable than he expected; and we understand from those who accompanied him on the return route some distance, that he expressed the opinion that the direct route, due east from here, was altogether practicable by cutting a short tunnel, of perhaps 150 yards long, which would be preferable to going a mile further South through the White Gap. A thorough survey, however, will be made, to test by the instruments the correctness of these opinions."

We learn from W. P. Orme, Esq., Treasurer and Secretary of the company, that there are now two corps of Engineers in the field locating with all possible dispatch. He says:

"We hope, in the course of a month, to give you a notice to contractors, of a public letting of the first fifty miles of the road. We have the means and the men to push the work through—and I predict that the same distance of road was never in Georgia, built in so short a time as this will be."

Southern Pacific Railroad.

J. Edgar Thomson, of the Pennsylvania Central, had resigned the Presidency of the Southern Pacific Railroad Company, on account of the demands upon his time and energy by the Pennsylvania Road. The vacant position has been tendered to Colonel V. K. Stevenson, President of the Nashville and Chattanooga Road.

Lexington and St. Louis Railroad.

We learn from the St. Louis *News* that this road was placed under contract to John M. Wimer & Co., of St. Louis, on the 4th inst. The work to be commenced within fifteen days and completed within fifteen months. Arrangements were accordingly made to commence work at Farmers city on the 18th. We have reason to believe, from the character of the contractors, that the work will be pushed forward as fast as possible, and that the cars will be running to Georgetown by the commencement of winter.

Atlantic and North Carolina Railroad.

The A. & N. C. R. R. commences at Morehead City on Beaufort Harbor and extends in a northwesterly direction to Newbern and thence westerly to Goldsboro', connecting at the latter point with the North Carolina and the Wilmington and Weldon Railroads. The total length of the line is 94 miles and 4,589 feet, and the length of sidetracks and tracks at stations 6 miles and 2,078 ft. total length of track 101 miles and 1,387 feet.

The receipts from transportation for the year ending 31st May, 1860, were as follows:

Transportation of passengers	$50,636 87
" of freight	48,962 91
" of mails from 1st July, 1859	4,354 17
Amounting to the sum of	$103,953 95
And the operating expenses for the same time were	68,382 12
Leaving as net profits for the year the sum of	$35,571 83

The details of the operating expenses as exhibited by the treasurer were—

Salaries of officers	$3,800 00
" of agents	3,906 67
Machinery Department	11,132 54
Transportation Department	25,147 80
Road Department	21,884 05
General administration	2,147 70
Tax account	309 36
	$68,382 12

The cost of the road has been as follows—

Construction and equipment to 31st May, 1859	$1,938,956 91
Do. since	76,322 02
Amounts due contractors and am'ts claimed by contractors, etc.	139,000 00
	$2,154,278 93
Loss on Craven County bonds and not included in Treasurer's acc'nt,	3,224 58
Total cost of construction and equipment	$2,157,503 51

In relation to the construction and equipment

of this road, Ellwood Morris, Esq., has made a report from which the following is an abstract:

"That so far as my acquaintance extends to the railroads of North Carolina, (and I have been *upon* or *along* them all,) your railroad undoubtedly compares favorably with them, in its construction and cost, and certainly ranks in the first class in this State.

The location represents long straight lines and gentle curves; the grades are only 26 feet to the mile; the bridges and culverts have substantial masonry and superstructure; the track is of heavy iron, laid with wrought iron joint chairs upon 8 inch square ties, at 27 inches apart centres; the road-bed possesses the important advantage of being entirely destitute of trestle work, and will be an excellent one, so soon as the earth-work becomes consolidated by time.

The work-shops of the Company, at Newbern, are well arranged and well constructed; they are not larger nor more expensive than the wants and prospects of the road require, and they need the addition of a carpenter and paint shop at a cost of about $5,000 to render them complete. The necessity of good and extensive shops is fully recognized by the railroads of the State, and two of them are now engaged in providing themselves, at a large expense, with these indispensable works.

The rolling stock is well cared for, and it is equal in quality, throughout, to that of any railroad in North Carolina. It is now new, but as time advances, and it becomes augmented in quantity, your master mechanic will find ample employment in maintaining it in its present good condition."

TREASURER'S ACCOUNT FOR THE YEAR 1859-'60.

Railroad Earnings.

The receipts of the Grand Trunk Railway of Canada, for the week ending September 8, 1860, were | $73,244 49
Corresponding week, 1859 | 48,758 68
Increase | $24,485 81
Total traffic from July 1, 1860 | $575,624 59
Do. for same period last y | 421,254 68
Increase | $154,369 91

The La Crosse road earned in Aug.,

1860 | $52,570 34
1859 | 44,603 60
Increase | $7,966 74

The increase was chiefly made in the last week, as the new crop has hardly commenced to move.

Flint and Pere Marquette Railroad.

Twenty miles of this road, from the dock at East Saginaw to within a short distance of Pine Run, is now completed and in good running order. Gov. Wisner, in company with a number of citizens of this place and Flint, passed over it on Wednesday, the 5th inst. His official certificate to the fact of the completion of twenty miles in accordance with the terms of the grant, enables the company to draw 120 sections or 76,800 acres of land, which will greatly aid the Co's future operations. We hope the company will be able this fall to complete the remaining 12 miles of the distance to Flint.—*Saginaw Enterprise.*

The Pacific Railroad.

The road-bed on this road is completed seven miles West of Otterville, and the work of laying down the rails for the cars has been commenced. The road is doing a lively business. The Jefferson *Inquirer* says that thirty or forty cars loaded with freight pass that place every day going East or West.

☞ The roadway and estate of the Hudson River and Lake Ontario Railway Company were sold a few months since on a foreclosure of its mortgages, and the purchasers have recently organized a new company, with a capital of $5,000,000, for the purpose of completing the road as originally contemplated. The Watertown *Union* understands that "a number of English capitalists are associated in the new organization, and that the work will soon be resumed under auspices which will secure the development and ultimate completion of this important enterprise."

ENGLISH WATCHES.

THE CELEBRATED

LONDON WATCHES.

I. & M. T. LEVITT,

CHRONOMETER MAKERS TO THE ROYAL NAVY.

FOR SALE BY

J. H. BRADBURY,

19 MAIDEN LANE,

SOLE IMPORTER.

BEST WATCHES IN THE WORLD.

MOST DURABLE & ACCURATE TIME KEEPERS.

EACH Watch is accompanied with a Certificate countersigned by J. H. BRADBURY. A large assortment of

GOLD AND SILVER WATCHES

OF EVERY DESCRIPTION,

ALWAYS ON HAND.

Also Agent for the MORRIS TOBIAS WATCH.

WINANS' INCRUSTATION POWDER.

ONE to two pounds a week will prevent scale, and insure a clean boiler; six to ten pounds will remove old deposit, and without causing leaks. POSITIVELY no injury from its use, and no foaming, as has been proved by four years' test. Cost 25 to 40 cents a week, which is amply repaid in saving of fuel. Every one-sixteenth of this non-conducting stone lining, or scale, requires 14.7 per cent. extra heat to generate steam, and injures the iron proportionately, say from 8 to 25 per cent., to go to repair account. JAMES MILHOLLAND, Reading R. R., has used it in over 100 engines.

H. N. WINANS, 11 Wall St., N. Y.

OFFICE BELVIDERE DELA. R. R. CO.,
Lambertsville, N. J., April, 1859.

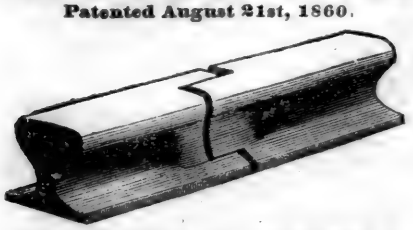
MR. H. N. WINANS:

We have used your Powder for 16 months past, and I can detect no injurious effects, either to our Boilers or Engines. I have no apprehension of its doing injury, or I would not continue to use it, as I could do without it, but find the Locomotives steam better, consequently save fuel. It keeps our boilers tight, and does not foam, the flues and plates are clean and smooth, and I can detect no corrosion. N. S. CONGDON, M.M.

Notice to Contractors.

RAILROAD FROM HAVANA.—BRANCH FROM the city to the Cerro. The Company feeling disposed to contract for the construction of this line, the longitude of which has to be eight and three-quarters English miles, will admit proposals, under sealed covers, in the office of the Company of Credits and Insurance "La Alianza," San Ignacios, No. 90½ (Habana), till noon of the 19th October next, on which day they will be opened, and if they be admissible, the contract will be closed in favor of the best bidder, preference being given to the party who binds himself to conclude the work in the shortest time.

The above Companies also desire to contract for—
750 tons Philadelphia Iron Rail of the best quality.
16 tons Corners or Elbows or Joints.
6 tons Nails for same.
10 tons Crotchets or Uniting Plates.
4 tons Screw Nails to fasten the rails to the sleepers.



The propositions will be received in the office named, up to the 20th (twentieth) of next month, October, and in case of agreement, the arrangements will be made accordingly.

REFERENCES:
SAML. & WM. WELSH, in Philadelphia.
GIMBERNAT & ESCORIAZA, in New York.
DON LOUIS YBOLEON BOSQUE, in Havana, Engineer of the Company.

The two former will exhibit drawings of the materials and system of construction, and the latter, the plans, conditions and other required information, in Concordia st., No. 35, from seven till ten in the morning. 2t39

LOCK JOINT
FOR RAILROAD BARS.

Patented August 21st, 1860.

FULL PARTICULARS ON APPLICATION TO

AARON DOUGLASS,
210 Main Street, PATERSON, N. J.

E. G. KELLEY,

SOLE AGENT FOR THE CITY OF NEW YORK FOR the sale of the **OILS** manufactured by the PATENT PARAFFINE LUBRICATING OIL COMPANY, whose Oils are manufactured by his newly-discovered process, which gives them the properties of pure **SPERM OIL.** E. G. KELLEY'S Patent Triple-refined Paraffine Lubricating Oil, for cotton spindles and all kinds of fine machinery (No. 1), $1 per gallon; do., for heavy machinery (No. 2), 75 cents. E. G. Kelley's White Chemical Oil, for engines (No. 1), 65 cents per gallon; do., for heavy machinery (No. 2), 45 cents. E. G. Kelley's Patent Triple-refined Illuminating Oil, superior to any in the market (No. 1), 75 cents per gallon; do., common Illuminating Oil (No. 2), 65 cents. Sperm, Lard, Whale and Fish Oil, of tested and warranted quality, furnished at from 5c. to 10c. per gallon below the usual market price. Office for the sale of the Oil, **No. 116 John st.,** New York. AGENTS wanted for towns and cities.

E. G. KELLEY,
3m39 Manufacturing and Analytical Chemist.

OFFICE OF THE MOBILE AND OHIO R. R. Co.,
Mobile, Sept. 8th, 1860.

PROPOSALS addressed to the undersigned, will be received until 20th October next, for furnishing first-class **SLEEPING CARS** for through trains on this road.

The Proposals must state the name of the patent, under which the Cars will be constructed, the time they can be delivered, and the price at which the Company can purchase them—including the Patent right to use the same—at the expiration of one or two years, after date of delivery on the road.

L. J. FLEMING,
5t38 Chief Eng'r and Gen. Sup't.

TEN WHEEL LOCOMOTIVE
NOTICE TO RAILROAD COMPANIES.

WHEREAS Letters Patent of the U. S. have been issued to SEPTIMUS NORRIS for the Ten Wheel Locomotive Engine, having six driving with two, or four truck, or guide wheels, RAILROAD CORPORATIONS AND BUILDERS of Locomotives, will take notice that RICHARD NORRIS & SON, of Philadelphia, having taken a license, are the only persons as yet authorized to build or use said patent. BUILDERS and COMPANIES purchasing elsewhere (unless by special license,) render themselves liable for **INFRINGEMENT of PATENT.** Particulars concerning terms, may be had of

OCTAVUS J. NORRIS,
AGENT FOR THE PATENTEE,
2m38 **1809 Spruce St., Philadelphia.**

ANALYTICAL AND
Manufacturing Chemistry,

No. 24 WILLIAM STREET,
Rooms Nos. 38 & 39. NEW YORK.

CAREFUL Analysis made of all Minerals and Commercial Articles. Surveys and Reports made upon Mines and Quarries. Coal Oil Works planned and erected and contracts made. The best modes furnished for manufacturing, purifying and deodorizing oils from coals, petroleum, and other bituminous substances. Coal Oils tested and purified. Superintendents and skilled workmen furnished to manage Coal Oil Works and Mines. The Kerosene patents from which originated the Coal Oil Business of the United States were granted to Dr. GESNER.

GESNER'S, Chemists & Engineers.

BALLARD'S PATENT
CLAW JACK SCREWS,

MANUFACTURED AT

No. 7 Eldridge Street, near Division,
NEW YORK.

LARGE and small **CLAW JACKS** for BRIDGES, RAILROAD and BOILER BUILDERS, SHIP BUILDERS, STONE QUARRIES, and **various other kinds,** for different purposes.

CAR DUCK.

HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, 11 to 140 inches, PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.

For sale by

WILLIAMS & PAGE,
67 Water st., Boston.

PHILIP F. PASQUAY,
25 SPRUCE STREET, NEW YORK,
MANUFACTURER OF SUPERIOR OAK TANNED STRETCHED
LEATHER BELTING.

THESE BELTS are cemented and riveted together to any length that may be required, and warranted to run straight on the pulleys.

Best quality of **LACE LEATHER** constantly kept on hand. Also dealer in **VULCANIZED INDIA RUBBER GOODS,** viz.:—CROTON and STEAM HOSE of all sizes, STEAM and PISTON PACKING.

List of Prices can be obtained at the store. In comparing the List of Prices with those of other manufacturers, it is necessary to compare also the Belting, the difference no doubt will give it in favor of my manufacture.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

Sheet No.		Sheet No		
1.	General Table for all Bases and all Slopes.	13.	for Base 18 ft. Slop.	1½ to 1
		14.	" " "	1½ to 1
2.	For Side Hill Cuts and Fills.	15.	" 24 "	¼ to 1
3.	Base 12 ft. Slopes 1½ to 1	16.	" 24 "	1½ to 1
4.	" 14 " 1½ to 1	17.	" 25 "	1½ to 1
5.	" 15 " ¼ to 1	18.	" 26 "	1½ to 1
6.	" 15 " 1 to 1	19.	" 28 "	¼ to 1
7.	" 15 " 1½ to 1	20.	" 30 "	1 to 1
8.	" 16 " ¼ to 1	21.	" 30 "	1¼ to 1
9	" 16 " 1 to 1	22.	" 30 "	1½ to 1
10.	" 18 " ¼ to 1	23.	" 32 "	1 to 1
11.	" 18 " ¾ to 1	24.	" 32 "	1½ to 1
12.	" 18 " 1 to 1			

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c. each;** or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT
Centrifugal PUMPS

ARE the best and cheapest Pumps made for **RAILROAD STATIONS, MINES, FACTORIES, TANNERIES, PLANTATIONS, DRAINAGE, IRRIGATION, WRECKING,** and general use.

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST.,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 43

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

New York, Saturday, October 6, 1860.

Railroads in the State of Pensylvania.

The railroads first opened in the State of Pennsylvania were constructed for the purpose of connecting the Eastern or Anthracite Coal Fields with several lines of canals designed to serve as their outlets. It was found impossible to extend the canals to the mines, and hence the necessity for some means of land transportation more expeditious and economical than the ordinary earth roads. The railroad first constructed in the State, and the second in the United States, was the Mauch Chunk and Summit Hill, from a place of the same name on the Lehigh Canal to the coal mines of the Lehigh Company. It was brought into use in 1827. It was originally laid with a flat bar 2×½ inches. The loaded cars descended by their own gravity, and were drawn back by mules. The road belongs to the Lehigh Coal and Navigation Company, and no statement of its cost or earnings is made distinct from the other works of the company.

The second railroad constructed was the Carbondale and Honesdale, extending from the Delaware and Hudson Canal to the Northern or Lackawanna Coal fields. It was opened in 1829. It was 16½ miles long, and laid with an ordinary flat rail. It is a gravity road, made up of short and long planes—the cars being drawn up the former by stationary engines, and descending the latter by their own gravity. It has been entirely re-constructed, and extended 10 miles. The road belongs to the Delaware and Hudson Canal Company of New York. No separate statement of its earnings is given in the reports of that company.

The Mill Creek and Mine Hill Railroad, extending from Palo Alto on the Schuylkill Canal to the Coal Mines, 4 miles was also opened in 1829. The road was worked by horse-power, for many years. Several branches have been constructed, making an aggregate length of line at the present time of 12.52 miles. No statement of its affairs prior to 1848 could be obtained. Since that time it has been a productive work paying dividends at the rate of 10 per cent. annually.

In 1830, 12.73 miles were opened: the Schuylkill Valley, from Port Carbon to Tuscarora, 9.23 miles; and the Union Canal Company's Road at Pine Grove, 3½ miles. To the former several branches have been added, making the aggregate length of line 24.45 miles. No statement of its affairs prior to 1848 could be obtained. Since that time the road has paid dividends at the rate of 6 per cent annually.

In 1831, 20.50 miles were opened: the Mine Hill and Schuylkill Haven, 13⅓ miles, and the Mount Carbon, 7 miles. The main line of the former has been extended 11 miles, and it has 47¾ miles of branch Roads. The road has been a successful work, having paid dividends averaging 11 per cent. annually. The Mount Carbon has also been a successful work, having paid dividends at the rate of 6⅔ per cent. annually.

In 1833, 48.7 miles were opened: the Philadelphia and Trenton, 28.2 miles; the Room Run, 5 miles; and the Lykens Valley, 15½ miles. In 1836, a contract was made with the Camden and Amboy Company, whereby the share capitals of the two companies were to share in the same rate of dividend. In 1837 the latter purchased the greater portion of the shares of the former, and the two roads may now be considered as one line. The Room Run Railroad belongs to the Lehigh Coal & Navigation Company. With reference to the Lykens Valley Railroad, no historical information could be obtained.

In 1832, the Little Schuylkill was opened 20 miles, and the Philadelphia, Germantown and Norristown, to Germantown, 7 miles. The Little Schuylkill is a mining as well as a transportation company. No account of its financial affairs could be obtained previous to 1852. From that year to 1857 it paid dividends at the rate of 7 per cent. No dividends were paid for 1858 and 1859. The Philadelphia, Germantown and Norristown was completed to Norristown in 1835. It was for many years an unproductive work. In 1847 its affairs were re-organized, whereby it became relieved of a large portion of its indebtedness. It commenced the payment of dividends in 1850, which, for four years, (1856--59), has averaged 10 per cent.

In 1834, 127 miles were opened: the Philadelphia and Columbia, 82 miles; the Alleghany Portage, 36 miles, and the Westchester, 9 miles. The two former were portions of the State system of public works, and were sold in 1857 to the Pennsylvania Railroad Company. The Westchester, which has been run without profit, as a general rule, is now leased to the same company.

No new road was opened in 1835. In 1836, the Beaver Meadow Railroad, 20½ miles long was opened. This Company publishes no statement of its affairs, and no information could be obtained in reference to the same, except that contained in the report made to the Auditor of the State. It has for many years past been a productive work, and last year paid dividends to its stockholders equaling 12 per cent.

In 1837, the Harrisburg, Portsmouth, Mount Joy and Lancaster Railroad, 36 miles long was opened. This Road was leased to the Pennsylvania Railroad Company in 1849, and now forms a part of its line. It has for several years past been a productive work, and has paid dividends averaging about 3 per cent. on the share capital of the company, since it was opened. The Cumberland Valley Railroad was opened in 1837. It was an imperfectly constructed work, and its earnings for several years were only sufficient to pay expenses and interest on its debt, about $275-000. In 1849 its re-construction was commenced, and completed in the following year. Since that

time it has been a productive work, although it has not yet paid dividends on its common stock. The Strasburg Railroad, running from the Philadelphia and Columbia Railroad, 4.25 miles long, was opened in 1837.

In 1838, 142 miles were opened: the Philadelphia, Wilmington and Baltimore, 98 miles, and the Franklin, 22 miles. The Philadelphia, Wilmington and Baltimore Railroad has for several years past been a productive work, and has for the whole period since its opening paid dividends averaging about 3 perc ent. annually. The Franklin Railroad Company became embarrassed soon after the opening of its road, which was operated by a Sequestrator till 1852, when it became unsafe for trains to run over it and they were consequently discontinued. In 1859 the road was re-constructed, and is now operated by the Cumberland Valley Railroad Company. No report of its affairs since its re-construction has been made. The York and Maryland Line, constructed and owned by the Baltimore and Susquehanna Company, and forming part of the line of its road, was opened in 1838.

In 1839, 83 miles were opened; the Philadelphia and Reading, 58 miles, and the Williamsport and Elmira, 25 miles. The Philadelphia and Reading Railroad, which was fully opened in 1842, has returned to its stockholders dividends at the rate of 4.65 per cent. annually. A portion of its dividends have been paid in certificates of stock. It is the great coal railroad of the country. The Williamsport and Elmira was operated for many years without profit, and in 1849 was sold, and a new company organized by which the old road was re-constructed, and its line extended to Elmira, in the State of New York, to which it was opened in 1854. The company soon after became embarrassed in its affairs, which have been re-organized, by the conversion of a portion of its debts into a preferred stock. The road has paid nothing to its stockholders.

In 1840, 63.45 miles of railroad was opened: the Lehigh and Susquehanna, 19.71 miles; the Lorberry Creek, 5.13 miles; the Tioga, 25.61 miles, and the Wrightsville, York and Gettysburg, 13 miles. The Lehigh and Susquehanna Railroad belongs to the Lehigh Navigation and Coal Company. The Lorberry Creek is an unimportant work, used exclusively in the transportation of coal, The Tioga Railroad was re-constructed in 1852. To that date it had been an unproductive work. For three years (1857-9) it has paid dividends equaling 6 per cent. on its preferred stock. Its revenues are almost exclusively derived from the transportation of coal. The Wrightsville, York and Gettysburg is leased to and run by the Northern Central Railroad, and has earned dividends for the past five years equaling about 2 per cent. annually. Previous thereto it was an unproductive work.

No additional mileage was opened till 1842, when the Philadelphia and Reading R.R. was completed, from Reading to Mount Carbon, 35 miles.

No mileage was opened in 1843. In 1844, the Mount Carbon and Port Carbon, 2½, and the Swatara, 6 miles, were opened. The former has been a productive work, having paid dividends at the rate of 12 per cent. annually. The Swatara is an unimportant work and is exclusively engaged in the transportation of coal. No account of its operations could be obtained.

In 1848 that portion of the New York and Erie Railroad in the State of Pennsylvania, 42 miles, was opened.

In 1848, 72 miles of the Pennsylvania Railroad was opened. This road was fully opened in 1854, by the completion of the Mountain Division, previous to which the Portage Railroad was used for crossing the mountains. This road has been a productive work, and has paid dividends averaging about 5 per cent. annually.

In 1850, 112 miles of railroad were opened; the Pennsylvania Coal Company's road, 47 miles, and the Pennsylvania Railroad (extended), 65 miles. The Pennsylvania Coal Company is engaged in mining, as well as in the transportation of coal. The enterprise has been productive, having returned to its stockholders dividends averaging 6 per cent.

In 1851, 220 miles of railroad were opened; the Delaware, Lackawanna and Western (northern division), 63 miles; the York and Cumberland, 27 miles; the eastern portion of the Ohio and Pennsylvania, 42 miles; the Dauphin and Susquehanna, 18 miles; the Columbia Branch of the Harrisburg and Lancaster Railroad, 18 miles, and the Pennsylvania (extended), 52 miles. The Delaware, Lackawanna and Western, for several years after its opening, paid dividends averaging about 5 per cent., when it became embarrassed, and made an assignment of its property for the benefit of its creditors. Its affairs, however, were soon adjusted, and the company has again resumed the payment of dividends. The Ohio and Pennsylvania, now the Pittsburg, Fort Wayne and Chicago, for a time was regarded as a successful work, but since its consolidation with the Ohio and Indiana, and Fort Wayne and Chicago, has been greatly embarrassed having failed to meet the interest accruing on its funded debts. Measures are now in progress for the re-organization of its affairs. The Dauphin and Susquehanna is now known as the Schuylkill and Susquehanna Railroad. It has been an unproductive work, and in 1859, the road was sold, and a new company organized under the present title. The York and Cumberland Railroad was consolidated into the Northern Central in 1854.

In 1852, 82.90 miles were opened; the Erie and North East, 18.50 miles; the Hanover Branch, 12.90 miles; that portion of the Cleveland and Erie Railroad in the State of Pennsylvania, 25.50 miles. and the Pennsylvania Railroad (extended), 26 miles. The Erie and North East is now virtually consolidated into the Buffalo and State Line Company, of New York. It has been a productive work, having paid dividends at the rate of 10 per cent. The Hanover Branch has paid only one dividend of 2 per cent. The Cleveland and Erie Railroad is described under the railroads of Ohio.

In 1853, 31.50 miles were opened: the Chester Valley, 21.50 miles; the Westchester and Philadelphia, 6.25 miles, and the Tioga (extended), 3.75 miles. Both the Chester Valley and the Westchester have been unproductive works, and been greatly embarrassed in their affairs.

In 1854, 259.67 miles were opened: the Catawissa, Williamsport and Erie, 64 miles; the Chestnut Hill, 4.17 miles; the North Lebanon, 7.50 miles; the Sunbury and Erie, 27.50, and the Trevorton, 14.50. The following roads were extended: the Little Schuylkill, 8 miles; the Pennsylvania, 89 miles; the Dauphin and Susquehanna, 36 miles; the Williamsport and Elmira, 53 miles, and the Westchester and Philadelphia, 6 miles. The Catawissa, Williamsport and Erie succeeded to the Little Schuylkill and Susquehanna Railroad, which was partially completed as early as 1841. The company has been in an embarrassed condition almost from the opening of its road, and its affairs have been recently re-organized by the conversion of its indebtedness into different classes of share capital. The Chestnut Hill Railroad is leased to and operated by the Philadelphia, Germantown and Norristown Company. The North Lebanon is a local work constructed for the conveyance of iron ores and coal to and from the Union Canal. It is in fact a private enterprise. The Sunbury and Erie is yet an unfinished work. The Trevorton is a coal road, belonging to a coal mining company, the bonds issued by which cover coal lands as well as the railroad. This company is in default for the payment of the interest due on its bonds.

In 1855, 138 miles were opened: The Huntingdon and Broad Top, 21.25 miles; the Lehigh Valley, 45.50 miles; the North Pennsylvania, 28.75 miles, and the Pittsburg and Connellsville, 25 miles. The Sunbury and Erie was extended 12.50 miles. The Huntingdon and Broad Top, which is a coal road, has paid nothing to its stockholders. The Lehigh Valley has been a productive work, having paid dividends at the rate of 6 per cent. annually. The North Pennsylvania has paid nothing on its stock. The Pittsburg and Connellsville is an unfinished work.

In 1856, 261.95 miles were opened: the Alleghany Valley, 44 miles; the Barclay, 16.50 miles; the Catasauqua and Foglesville, 10 miles, built for the accommodation of establishments for the manufacture of iron; the Delaware, Lackawanna and Western (southern division), 48 miles; the Lackawanna and Bloomsburg, 24 miles; the Lackawanna, 9 miles; that portion of the Cleveland and Pittsburg Railroad in the State of Pennsylvania, 14.95 miles; the Lebanon Valley, 54 miles, and the M'Cauley Mountain, 6 miles. The following roads were extended: the Huntingdon and Broad Top, 11 miles; the Pennsylvania (Indian Branch), 16.50 miles; and the Pittsburg and Connellsville, 8 miles. The Alleghany Valley is an unfinished work, and has paid nothing to its stockholders. The Barclay is a mining as well as a transportation company. Its road has thus far been an unproductive work. The Lackawanna and Bloomsburg has only recently been completed. The Lackawanna is a local work connecting the Delaware, Lackawanna and Western with certain coal mines. The Lebanon Valley has been consolidated into the Philadelphia and Reading Railroad. The M'Cauley Mountain is a coal road of no public importance. The Cleveland and Pittsburg Railroad is described among the railroads of Ohio.

In 1857, 126.25 miles were opened: the Hempfield, 32 miles, and the Northern Central, 19 miles. The following roads were extended: the Lackawanna and Bloomsburg, 34 miles; the North Pennsylvania, 26.25 miles, and the Pittsburg and Connellsville, 15 miles. The Hempfield is still an unfinished work, and has proved entirely unproductive. The Northern Central, which is a consolidation of several lines, is described among the railroads of Maryland.

In 1858, 155.65 miles were opened: the Gettys-

burg, 17.12 miles, and the Quakake, 14 miles. The following City or Horse Railroads were also opened: the Citizens', 8.50 miles; the Frankford and Southwark, 16.50 miles; the Fairmount, 5 miles; the Philadelphia and Gray's Ferry, 7 miles; the Philadelphia and Darby, 4.25 miles; the West Philadelphia, 9.25 miles. The Shamokin Valley Railroad Company was also organized and took possession of its road, 28.10 miles, in 1858. This road was constructed in 1833, under the title of the Danville and Pottsville Railroad Company, and afterwards abandoned. In 1850 the road passed into the hands of a new company, the Philadelphia and Sunbury, by which it was subsequently reconstructed, and in 1858 passed into the possession of the present company. The following roads were extended in 1858: the Northern Central, 26 miles, and the Westchester 20 miles. The Gettysburg Railroad is operated by the Hanover Branch Railroad. The Quakake has hardly commenced operations. The earnings of the Philadelphia City Passenger Railroad cannot at present be obtained.

In 1859, 258.92 miles were opened: the East Pennsylvania, 36 miles; the Fayette County, 12.67; the Littlestown, 8.50, and Philadelphia and Baltimore Central, 6 miles. The following City or Horse Roads were opened: the Fairmount and Arch Street, 5 miles; the Germantown, Fourth and Eighth Streets, 17.25 miles; the Girard College, 5.50 miles; the Green and Coates Street, 5.25 miles; the Hestonville, Mantua and Fairmount, 7 miles; the North Philadelphia, 5.50 miles; the Philadelphia City, 4 miles; the Richmond and Schuylkill, 5.25 miles; the Ridge Avenue and Manayunk, 9 miles; the Seventeenth and Nineteenth Streets, 6 miles, and the Thirteenth and Fifteenth Streets, 6 miles. The following roads were extended: the Northern Central, 6 miles, and the Sunbury and Erie, 112 miles.

In the current year, (1860), 102½ miles have been opened: the Bellefonte and Snow-Shoe, 18½ miles; the Erie and Pittsburg, 40½ miles; the Lehigh-Luzerne, 20 miles. The Lackawanna and Bloomsburg was extended 11 miles, and the Philadelphia and Baltimore Central, 12½ miles.

A large number of railroads are in progress in the State, among which may be named the Sunbury and Erie; the Erie and Pittsburg; the Atlantic and Great Western, and the Philadelphia and Baltimore Central.

In the extent of City or Horse Railroads, Philadelphia far exceeds any city in the country—the length of the roads in it, in actual operation, being 148 miles. These have been constructed at a nominal cost of $3,672,785, or $25,000 per mile—about one-eighth the cost of the railroads in the city of New York; the railroads of Philadelphia are, however, measured on their single track roads.

STATEMENT, *showing the Share Capital and Debts of the principal Railroad Companies of the State of Pennsylvania, with the amount of the productive and unproductive capital of each, respectively:*

Corporate Titles of Companies.	Share Capital. Total.	Produc.	Unprod.	Funded Debt.	Funded & Float'g Debt. Total.	Produc.	Unprod.

The above table, though very nearly, may not be entirely accurate, in the division of productive and unproductive capital. In two or three instances the funded debts of companies were put down as productive, although the earnings of the roads have not been sufficient to pay the interest on them. In such cases the roads have been recently opened, or the interest has been paid by other parties. The funded debt of the Pittsburg, Fort Wayne and Chicago, is put down as productive, although the company is not at the present time paying the accruing interest, which appears to have been earned. As the table is a recapitulation of the statements of the several companies, a reference to them will give the necessary explanations and corrections.

The whole amount of capital invested in the railroads of the State of Pennsylvania at the end of 1859 was $175,737,117. Of this sum $92,008,778 represented the amount of share capital; $76,097,367 the amount of funded debt, and $7,630,970 the amount of floating debt. Of the share capital $42,310,075 or 46 per cent. of the whole was productive, and $49,698,703 unproductive; and of the total debt ($83,728,339) the amount productive was $76,462,527 or 91 per cent. and the amount unproductive $7,265,814.

The average cost per mile of the railroads of Pennsylvania has been $56,397. The cost per mile of the 2,350 miles represented in the following table for 1859 was $58,608. This cost for roads traversing so uneven a State as Pennsylvania and surmounting great natural obstacles, and which are generally substantially built, is very moderate. The most costly road of the State, and also of the United States, is the Philadelphia and Reading Railroad, which averages $140,000 per mile.

The total gross earnings of the railroads of the State, including those of the Pittsburg, Fort Wayne and Chicago Railroad, which is essentially a Pennsylvania work, have amounted in the thirteen years ending with 1859 to $159,989,901, of which amount $48,546,313 has resulted from passenger transportation; $100,709,251 from the transportation of coal and merchandise, and $10,734,337 from other sources, including mails, expresses, rents, etc. The current expenditures in the same time have been $88,439,362; and the earnings less such expenditures, but not including interest on debt $71,550,539. The total amount divided on share capital has been $32,817,300. Reducing these amounts to proportionate equivalents, it will be found that the gross earnings have equalled about 12 per cent. on the whole liabilities, and 13 per cent. on the cost of construction; and that the net earnings have equalled 6½ and 7 per cent. on the said liabilities and cost respectively. The proportion of the gross earnings expended in operating the roads has been 55 per cent. The dividends paid have averaged on the total share capital about 3.9 per cent. per annum.

The difference between the net earnings or earnings less current expenses and the amount of the dividend paid on the share capital is $38,688,237. From this amount has been paid the interest on the gross debt, which funded and floating has amounted to $514,124,808. Assuming an average rate of 6 per cent. as the interest paid, this amount has received the gross sum of $30,847,482. The balance has lapsed to profit and loss.

RAILROADS IN THE STATE OF PENNSYLVANIA.

Statement showing the Share Capital, Indebtedness, Cost of Roads, etc., Gross Earnings from Passengers, Freight, etc., Operating Expenses, Earnings less Expenses, and Dividends made by the principal Railroad Companies for each year, since and including the year 1880:

Year.	Capital Account. Share Capital.	Bonded Debt.	Floating Debt.	Total Capital.	Cost of Road and Equipm't.	Miles of Road.	Gross Earnings. Passenger Earnings.	Freight Earnings.	Other Earnings.	Total Earnings.	Operating Expenses &Repairs.	Earnings less Expenses.	Amount of Dividend.

NOTE.—The cost of the State Railroads in the above table has been considered as so much dividend-paying capital, yielding 5 per cent. per annum. This ceased on the transfer of the roads to the Pennsylvania Railroad Company in 1857, in which year only 6 months' dividend is charged.—The railroads belonging to mining companies, and which are simply accessory to the business of mining are not included in the table. Such are the Beaver Meadow, the Barclay, the roads of the Lehigh Navigation Company, etc.—The Pittsburg, Fort Wayne and Chicago Railroad, and the Phila delphia, Wilmington and Baltimore Railroad are treated as Pennsylvania works, while the Norther Central is included among the Maryland roads.

Croton Aqueduct Board.

THE CHARGES AGAINST MESSRS. CRAVEN AND TAPPEN NOT SUSTAINED.

We give below the report of the Committee of the Board of Aldermen, appointed to investigate the charges preferred by the Mayor against ALFRED W. CRAVEN, Esq., Chief Engineer, and THOMAS B. TAPPEN, Esq., Assistant Commissioner of the Croton Aqueduct Board. The great length of the reply of these gentlemen to the charges of the Mayor, prevented our publishing it at the time. We however perused it with deep interest' feeling convinced that it was a thorough vindication of themselves and a complete reputation of the so-called charges of the Mayor, which were doubtless made at the instigation of other parties who were desirous of performing the duties which devolved upon these gentlemen, when their places were made vacant, either by their removal or resignation. It is unnecessary to say that we are pleased with the result, and rejoiced that we are enabled to say it thus publicly, and to place upon record the sensible report of the Committee. It is as follows:

TO THE HONORABLE THE BOARD OF ALDERMEN:—

The undersigned, the special committee to whom were referred the messages of his Honor the Mayor, dated the eleventh and eighteenth days of July, 1860, asking the concurrence of this Board in the removal of Alfred W. Craven, as Engineer, and Thomas B. Tappen, as Assistant Commissioner of the Croton Aqueduct Board, respectfully report:—

That your committee held their first meeting on the tenth day of September, ult., when they were attended by Messrs. Craven and Tappen

That previous to the assembling of the committee a note had been addressed by the committee to his Honor the Mayor, requesting him to appear before them on the investigation of the charges preferred by him, with which request his Honor refused to comply.

That on the second meeting of your committee, held on the eleventh day of September, ult., Messrs. Craven and Tappen both appeared before your committee and read their written answers to the charges contained in the messages of the Mayor, which answers were verified by them under oath, and are hereto annexed.

That the said answers having been read, each of said officers expressed his desire and anxiety to have the charges preferred against him thoroughly examined.

That his Honor failed to attend this meeting of the committee also.

That your committee thereupon directed their clerk to serve upon his Honor copies of the answers of Messrs. Craven and Tappen, and adjourned to the seventeenth ult., in order to give his Honor an opportunity of disputing the truth of said answers if he desired to do so.

That on that day your committee again assembled for the purpose of proceeding with the investigation, but finding that owing to some oversight of the clerk the answers had not been delivered to the Mayor, they again adjourned in order that a service thereof might be made.

That the said answers were served on the Mayor on the eighteenth day of September, ult., and that the next meeting of your committee was held on the twentieth of September ult.

That at this and the previous meeting Messrs. Craven and Tappen, were present.

The Mayor, however, failed to attend.

It is thus apparent, that while the parties accused by the Mayor have been ready on every occasion of the meeting of your committee to confront the Mayor, and enter upon the investigation of his charges, his Honor has steadily refused to appear before your committee, or to take a single step towards the substantiation of those charges.

The sworn answers presented by Messrs. Craven

and Tappen are, in the opinion of your committee, thorough refutations of the charges of the Mayor, and cast upon him the burden of proving his allegations.

This he has failed to do, and your committee can therefore draw no other inference than that he has become satisfied from a perusal of the answers that the charges contained in his two messages were erroneous and untrue.

It is, at all events, the opinion of your committee that there is not a single charge in either of those messages which is not thoroughly explained by the parties accused, and justice to them demands that your committee should express their sincere belief that the charges were unfounded, and that there is not the slightest ground for supposing that either the Engineer or the Assistant Commissioner has, in any respect, failed to discharge the duties of his position with ability and fidelity.

With reference to the charges of the Mayor in relation to the reservoir, your committee also deem it their duty to state that, in their opinion, there never has been an instance in which the estimates by an engineer of the probable quantities and of the cost of the work required for a work of this character, have so closely approximated to the actual result, and that Mr. Craven, so far from being subject to censure for his professional action in that matter, is deserving of the highest commendation.

In conclusion, your committee would report that the charges of his Honor have not only not been proven by him, but that they have been thoroughly disproved by answers of the accused, and your committee therefore present for the adoption of the Board the following resolution:—

Resolved, that this Board do not concur in the removal of Alfred W. Craven, Chief Engineer, and Thomas B. Tappen, Assistant Commissioner of the Croton Aqueduct Board, as requested by the messages of his Honor, the Mayor, dated July eleventh and eighteenth, 1860, respectively,

H. W. GENET,
F. J. A. BOOLE,
GEO. STARR.

Hartford and New Haven Railroad.

The annual meeting of this company was held on the 19th ult. The traffic of the year has been as follows:

From passengers	$428,042 30
From freight	320,853 53
Rents, express, and mails	41,640 93
Total	$790,536 76
The expenditures for operating and repairs of the road, including the purchase of new cars and miscellaneous expenses is	$388,731 46
Interest paid on bonds	55,348 40
Total	$444,079 86
Net earnings	346,459 90

The gross income of the road exceeds that of last year the sum of $67,076 47, and this gain is nearly equally divided between the passenger and freight traffic. The working expenses of the company, while showing a considerable increase, are not greater than is necessary from the progressive business of the company.

A new freight depot, 380 feet long and 90 feet in width, has been built in New Haven, at an expense of $16,102.

The whole number of passengers transported over the road for the year is 644,975 an increase over last year of 48,203; and the management of the road needs no further comment than the statement in the report that more than half a million of people have been carried with entire exemption from accident.

The Directors also recommend that the dividends hereafter be made quarterly instead of semi-annually.

The following Directors were then elected: Cornelius Vanderbilt, Henry Coit, New York; Charles F. Pond, Julius Catlin, Hartford; C. W. Chapin, Springfield; Ezra C. Reed, New Haven; James S. Brooks, Meriden; A. G. Hazard, Enfield; Samuel H. Parsons, Middletown.

Railway in Buenos Ayres.

The *Commercial Times* states that it was reported, on good authority, that the projected line from Rosario to Cordova was to be at once carried into effect, and that the National Government will guarantee 9 per cent. and give every facility for its speedy construction. The same journal reports that the works of the San Fernando were progressing favorably. General Urquiza had subscribed 20,000 doubloons to the Cordova, a project for a north-western line from Rosario, the port of the Argentine Confederation, to the interior city of Cordova, a distance of 250 miles, and about one-third of the way toward the Chilian frontier.

Great Indian Peninsula R. W.

The Bombay *Gazette* announces the opening of a further portion of this line from Mohol to Sholapore. This section of 20 miles completes Mr. Bray's contract from Poona to Sholapore, a distance of 163 miles, and makes the entire length now opened by the company 315 miles. The cantonment of Sholapore is the station that was chosen by the company for a temporary terminus during the period pending the completion of the through line from Bombay to Madras; and we are glad to learn that active measures are now being adopted both by the Peninsula and Madras Companies for the speedy construction of the whole of that important through line. Their point of junction is to be on the Moodgool and Lingasagoor road. The extensive contract now just finished by Mr. Bray comprises the viaducts over the Rivers Beema and Seena, and many other large works. Looking to the railway proceedings in other parts of India, we can honestly congratulate the public upon the punctuality with which the company have hitherto kept their engagements, and it ought to be a matter of satisfaction to the shareholders if it be true, as we are told, that their estimates of cost have not been exceeded, for such an extensive enterprise in an untried country must be liable to more contingencies and unforseen sources of expenditure than in England where experience may serve as a guide in all departments of railway operation. The *Telegraph and Courier* states that the whole of the Bhore Ghaut works have been suspended for the season, owing to the ravages of cholera all along the incline. Several European overseers have been swept away, and the native workmen have perished by scores. This is the second visitation of this fell disease, and must prove exceedingly disheartening to the managing engineers, Messrs. Adamson and Clowser, who fully expected to make up, before the rains, the ground which had been lost in December last. They have, however, spared no pains to drive the pestilence from their works: the huts of the workmen were at once pulled down and destroyed, medical comforts were provided, and every care taken both to alleviate suffering and to guard against the direful attacks of the disease. Thanks to their exertions, the virulence of the epidemic has, in a great measure, subsided; but all the great works are stopped, and will be so now, except in the tunnels, until after the monsoon. It is to be hoped that the next fair season will be more propitious, and that the ground which has been lost by unforseen calamities will be fully made up when the works recommence in October next.—*London Railway Times.*

☞ The Charleston *Mercury* of September 13th says: We noticed yesterday at the Northeastern Railroad wharf, two large freight engines, from the celebrated machinery shops of Messrs. M. W. BALLWIN & Co., of Philadelphia. These engines are intended for the upper division of the Georgia Railroad. We also noticed a third freight locomotive from the workshops of Messrs. RICHARD NORRIS & SON, also of Philadelphia. This engine is named the *Atlanta*, and is for the Atlanta and West Point Railroad.

Brooklyn City Railroad Suits.

Among the decisions of the General Term recently made at Newburg, is one in the matter of the suit brought by the Brooklyn City Railroad Company, in relation to the dispute about the use of the Furman street railroad track by the Central Railroad Company. The Court dissolved the injunction of the Central Company, restraining the City Company from interfering with their use of the track, and granted the City Company an injunction restraining the Central Company from using the Furman street track, or doing anything to prevent the City Company from enjoying the free and exclusive use of the track, provided the City Company file a bond in the sum of $20,000 in the County Clerk's office of Kings County, conditioned to indemnify the Central Company for

any damage it may sustain by such injunction, if the Court shall finally decide that the City Company is not entitled thereto.

Journal of Mercantile Law.

TELEGRAPH COMPANIES: LIABILITY OF FOR MISTAKES IN TRANSMITTING MESSAGES.

A very interesting case, involving the liability of telegraph companies for mistakes in sending messages from point to point, recently came before the Supreme Court of Pennsylvania. It was brought by one Andrew Dryburg against the New York and Washington Printing Telegraph Company, for carelessly and erroneously transmitting to him a message from Robert Le Roy in New York.

On the 26th November, 1855, Robert Le Roy went to the office of the defendants in New York and left with their clerk the following message to be sent to the plaintiff who was a florist in Philadelphia:

NEW YORK, 26th November, 1855.
To A. DRYBURG, S. W. cor. 19th and Race st.
Send me for Wednesday evening two hand boquets, very handsome, one of five, and one of ten dollars.

ROBERT LE ROY,
8 West 22d st.

In the message, as received in Philadelphia, the words "two hand boquets" read "two hundred boquets," and was so delivered to plaintiff. On the same day Mr. Dryburg inquired of Mr. Le Roy by telegraph: "Are the two hundred boquets intended for pyramids? Are the five and ten dollar for the table or hand?" To this he received the following reply on the same evening: "I wrote simply two hand bouquets and not two hundred. I want two bouquets for the hand, one at five, and the other at ten dollars."

The original message was received from Mr. Le Roy by the company for transmission upon the following terms and conditions. "To provide against mistakes, in the transmission of messages, every message of consequence ought to be repeated by being sent back to the office at which it is to be received, to the office from which it is originally sent. Double the usual price for transmission will be charged, when a message is so repeated and a report made by special messenger to the party sending the same whether it be received by the party to whom it was sent and if not, why not, or fifty per cent. in addition to the usual rates will be charged, for either repeating or reporting only. The company will not be liable for any loss or damage that may ensue by reason of any delay or mistakes in the transmission or delivery, or from non-delivery, of unrepeated messages, but only engage to use reasonable efforts to secure the services of complete and reliable employees, so as to have their business transacted in good faith. Nor will the company be responsible for mistakes in the transmission nor delay in the transmission or delivery nor for non-transmission or non-delivery of any repeated message, to any extent beyond ten dollars unless it be insured." Neither of the messages was required to be repeated or insured or paid for as such. The plaintiff between the time of the receipt of the first and second messages from Le Roy cut and procured a quantity of expensive flowers for the purpose of making bouquets, and brought this action for the damages alleged to have been thereby sustained. The defendants alleged that the word "hand" was written "hund" in the original message, and proved that the person was a skilful operator. The jury found a verdict for the plaintiff for $100; and the defendants appealed. The following is the opinion of the Supreme Court.

WOODWARD, J.—The Telegraph Company did not send Le Roy's message as he wrote it. If written as the company's agent read it, the word "hand" was written "hund," and if the company had sent the word "hund" to Dryburg, they would have been in no fault. Their agent, however, assumed that hundred was meant, and accordingly added the three letters *r*, *e*, *d*, which did all the mischief. We do not understand that there was any data after the letters "hund" to indicate contraction; so that the inference that hundred was meant, was entirely gratuitous. The wrong, then, of which the plaintiff complains consisted in sending him a different message from that which they had contracted with Le Roy to send. That it was wrong, is as certain as it was their duty to transmit the message for which they were paid. Though telegraph companies are not, like carriers, insurers for the safe delivery of what is entrusted to them, their obligations, as far as they reach spring from the same sources, the pulsive nature of their employment, and the contract under which their particular duty is assumed. One of the plainest of their obligations is to transmit the very message prescribed. To follow copy, an imperative law of the printing office, is equally applicable to the telegraph office. But when they violate this duty, whether negligently or wilfully; are they responsible to the party to whom the erroneous message is addressed? That is the exact question upon this record. That the defendants would be responsible to Le Roy, and that he would be responsible over to Dryburg, are not contested, though, perhaps, not conceded points; but that the company are liable to Dryburg is resisted on several grounds. In the first place, it is said, that the case belongs to that class of torts in which malice is the gist of action. This is a mistake. No malicious intent is alleged nor was it necessary that one should be alleged or proved. It is settled upon abundant authority that incorporate companies may be sued in their corporate character for damages arising from neglect of duty or for trover. And a corporation is liable in part for the tortious zeal, if the act be done in the ordinary service. Apart, however, from corporation law, it is said, in the next place, that upon general principles of agency the company can be held answerable to Le Roy only. That the relation of principle and agent existed between him and the company, there can be no doubt; but I do not think it equally clear that that relation was not established between Dryburg and the company. Telegraph companies are in some sort public institutions—open alike to all; and are largely used in conducting the commerce of the country. The Banks decline to act upon their authority; and, doubtless, individuals may also decline; but when a man receives a message at the hands of an agent of such a company, and does not act upon it, especially if as Dryburg did he use the same medium for responding to the message, it seems reasonable that for all purposes of liability, the telegraph company shall be considered as much the agent of him who receives as of him who sends the message. In point of fact, the fee is often paid on delivery and I am inclined to think, the company ought to be regarded as the common agent of the parties at either end of the wire. But however this may be, regarding the company as alone the agent of the sender of the message, it is to be doubted, that an agent is liable for misfeasance even to third parties. For non-feasance, I agree, the agent is responsible only to his employer because there is no privity of consideration betwixt the agent and the third party. The remedy in such cases must be sought in the maxim *respondeat superiori*; but even to this rule there is an exception in the instance of masters of ships, who although they are the agents or servants of the owners, are also, in many respects deemed to be responsible as principals to third persons not only for their own negligences and non-feasances, but for those of subordinate offices and others employed under them. The general rule, however, is laid down by Lord Holt in Lane *vs.* Sir Robert Colton. "A servant or deputy, as such, cannot be charged for neglect, but the principal only shall be charged for it; but for a misfeasance, an action will lie against a servant or deputy; but not as a deputy or servant, but as a wrong-doer. The cases of Camp *vs.* the Western Union Telegraph Company does not affect this principle as we apply it here, for the action was by the sender of the message, and it appeared that the message was sent subject to the express condition, that the defendant would not be liable for mistakes arising from any cause, unless the message was repeated by being sent back. This company had such a rule also; but they charge fifty per cent. advance upon the usual price of transmission, where the sender demands that the message be repeated back to the first operator and Le Roy did not pay it. If it be granted that in consequence of his not purchasing this security against mistakes he could not hold the company liable, it does not follow that Dryburg cannot. He did not know whether the message had been repeated back to Le Roy or not. He received it as the company delivered it to him, and it is very material to observe that the mistake was not due to what has been called the infirmations of telegraph, but to the improper liberties which the operator took with the text before him. The magic power which presides over the wires performed its duty faithfully, and bore the very message it was bidden to bear, but the human agent sent a different message from that which he was commanded to send. This is the misfeasance the plaintiff complains of. The company claimed that their operator was a skilful and careful one. Then his negligence in this instance was the more apparent and inexcusable. If the handwriting was so bad that he could not read it correctly, he should not have undertaken to transmit it; but the business of transmission assumed, it was very plainly his duty to send what was written. It was no affair of his that the message would have been insensible. Messages are often sent along the wires that are unintelligible to the operator. When he presumed to translate handwriting and to add letters which confessedly were not in it, he made the company responsible to Dryburg for the damages resulting from his wrong-doing. I do not conceive it necessary to go further in the discussion of the case. There are several errors assigned to which we have not specifically alluded,

but we see nothing in them to require a reversal of the judgment.

Richmond Manufactures.

We give herewith, from a local paper, the following sketch of one of the most extensive manufacturing establishments in the United States—the TREDEGAR IRON WORKS of *Richmond, Virginia*, conducted by J. R. ANDERSON & Co., a well known firm of that city. It is engaged in the manufacture of iron in almost every form in which it is used in the construction and repair of railroads. We are happy to insert the article as evidence of the progress southward, of one of our most important branches of domestic industry upon the proper cultivation and development of which real independence is based.

At the present day, when our whole country is in a state of political excitement, and disunion has almost become a by-word, it would seem to be the dictate of prudence, as well as patriotism, to direct the public mind to the encouragement of our own industrial pursuits, and disabuse it of the erroneous and fatal assumption, that the South is helpless, and, of necessity, must depend upon the North for most of its requirements in the mechanic arts.

So far as our iron manufactures are concerned, we are proud to say, that we occupy a ground which renders us independent of all foreign or hostile competition; and it will be a source of gratification to every one who feels an interest in the prosperity of our city, and the rapid development of our industrial resources, to know that here, in our midst, we can boast of an establishment of which not only Virginia, but the whole South, should be justly proud—we mean the

TREDEGAR IRON WORKS,

Conducted by Messrs. J. R. ANDERSON & Co.; and we propose, in this article, to give a running sketch of what a visit to these extensive works exhibits.

A pleasant walk on the canal bank, to the Armory grounds, brings us to the first

ROLLING MILL.

Here we find furnaces for melting and converting pig iron, and ponderous machinery for rolling it into the various forms of merchant and railroad bars, railroad axles, bridge bolts and railroad chairs; enormous machines that punch an inch hole through an inch bar; lathes for turning axles; screw-cutters, for cutting nuts and bridge bolts and machines for making every kind of railroad chair.

Our attention was particularly directed to the ingenious machinery, recently invented by one of their operatives, a most skilful workman, for rolling and straightening the continuous lip-chair and the new rail-splice, forming a continuous rail, and successfully introduced in the Island of Cuba. The principle on which this splice is made, is entirely new, as the depth required in the groove to receive the web of the rail, could not be attained by any mode of rolling hitherto adopted.

A few yards farther on we come to the second ROLLING MILL, where all the various denominations of large and small iron are made. Here the rods for making *spikes* are rolled; and attached to this mill is the new and extensive

SPIKE FACTORY,

Eighty-one feet long, by fifty wide, and four stories high, where the rods are fashioned into spikes of every form and size. A visit to this department would alone repay the curious for his trouble. You see here three gigantic machines turning out railroad spikes at the rate of one per second each, and from twenty to twenty-five tons per day; these falling into the basement story are carefully inspected, packed up in kegs, neatly marked and stored away ready for shipment.

In another part of this building is the

COOPER SHOP,

Worked entirely by negro boys, under the supervision of an experienced foreman, and on another floor are various machines for cutting *Nuts* and *Bridge Bolts*.

Passing through the south gate of the Rolling Mill, you come to the

FOUNDRY BUILDINGS.

The capacity of this department has been much increased within the last year. The first building is for very heavy work, and they are at this time casting heavy *Navy Guns*, and *Water Pipes*, two feet in diameter, for the city.

The next buildings are for general castings, such as railroad, bridge and engine work, and the third is exclusively for railroad

CAR WHEELS,

Of which, they manufacture both single and double plate. Near the Iron Foundry is the

BRASS FOUNDRY,

Where all the castings for Locomotives and other engines are made.

Leaving the Foundry we come next to the

FIRST MACHINE SHOP.

Here we find a new and powerful Hydraulic Press, for forcing the car wheel on to the axle, with an indicator to show the exact power required to effect it. Near it turns a horizontal, self-adjusting boring mill, for boring out the eye of the wheel. On the other side lathes, for turning axles, and one 50 feet long for turning long and heavy shafting and wheels. Lower down in this shop you come to the

GUN MILL,

for boring cannon, and the powerful lathes and planers for turning and finishing them off. The reputation of the guns made here is unrivalled by that of any made in this country or Europe, as the records and certificates in the Tredegar Office will show.

LOCOMOTIVE SHOP.

This building is three stories high, 150 feet long and 45 feet wide, and has attached to it a setting up shop, 140 by 60 feet, and a carpenter's shop for the wood work of cars, saw mills, &c.

In this shop all the nicer and more delicate work for locomotive, marine, stationary, portable and hoisting engines, saw-mills, sugar-mills, &c., is executed. Several highly finished locomotives are now being constructed, and will shortly be running on our Southern roads; a splendid engine and saw-mill, with two saws, one working above the other, is now being boxed up, ready for shipment to Cuba—with which Island, we understand, the proprietors have already inaugurated an extensive and profitable trade. In this department many new and improved tools have been recently introduced, and many more of entirely different character will in a short time be erected, for executing the large and important contract made with the State for putting

THE ARMORY

in condition, to turn out 5,000 rifled muskets per annum.

In front, and on the line of the river, stands the

BOILER SHOP,

one hundred and sixty feet long. A lively scene awaits the visiter here; but unless his ears are proof against the most stunning and distracting sounds, he had better keep clear of it.

In this shop the enormous boilers of the United States frigates Roanoke and Colorado were built.

Adjoining the Boiler Shop, and on the same line we find the

BLACKSMITH SHOP.

This building is 180 feet long, and is furnished with twenty-five fires, a large *Nesmith steam hammer*, besides smaller tilt-hammers. The greater part of this shop has been appropriated for a year or more past to the forging of car and truck work for Southern roads—for which articles the proprietors have received the most liberal encouragement. Adjoining this building, there is now in the process of erection a

CAST STEEL FOUNDRY,

with trip hammers and machinery for manufacturing the various kinds of steel, under the superintendence of a Southerner who has been many years engaged in the business. It opens a new and interesting field to Southern enterprise.

We have thus, in as concise a way as our limits and information would allow, given a hurried and imperfect description of these truly magnificent works. There are thousands in our own vicincity who have no idea that such an establishment as the Tredegar Works exists, and who would be amazed at viewing the multifarious and varied operations carried on there; for we believe there is no establishment within the broad limits of the United States where such a variety of work is executed. To the enterprising and energetic proprietors the State and the whole South owe a debt of gratitude, which we cannot doubt they will amply repay by a liberal patronage, and thus keep at home the money which they have heretofore so freely lavished upon Northern establishments hostile to our institutions, and whose unceasing efforts have for years past been directed to break down every attempt to introduce the mechanic arts in the South. That the work turned out from the Tredegar shops will compare favorably with that from the best Northern establishments, there is abundant evidence to show. Why should it be otherwise, when the best skill in the country is at their command to insure its quality, and their machiney is operated by the cheapest of all powers, water, from our never-failing canal?

Houston, Sabine and New Iberia Road.

The *Press* published at Lake Charles, Calcasieu parish in its issue of the 7th ult., says:

Mr. Lawton, engineer of the Houston, Sabine and New Iberia Railroad, was among us a few days with a view of ascertaining the most practicable point to cross the Calcasieu river. After reconnoitering some time, the least depth of water was 28 feet, and that is where the river and lake blend together. Mr. Lawton is of opinion at present that this point will be one selected for the railroad line. If this should prove correct, the road will pass immediately in our village, and be a source of great benefit to this remote corner of the State."

Peoria and Oquaka Railroad.

This company has been re-organized financially by the election of Charles L. Frost, Esq., of this City, as President, with a substantial Board of Directors with whom he consents to act and to give his personal attention in Illinois to the interests of property. The new board of City Directors consists of Charles L. Frost, President, of Frost and Forrest; Francis Skiddy, of F. Skiddy & Co.; R. M. Hennings, of Woodruff & Co.; John M. Furman, of Furman & Co.; Adolph Rusch, of F. & A. Rusch; Courtlandt Palmer.

Double Track on the New York Central.

The Rochester *Union* says that another section of double track has been completed recently on the Rochester and Buffalo Division of the New York Central Railroad. There is now double track from West Bergen to Buffalo—forty-eight miles, leaving a section from Rochester to West Bergen of twenty-one miles of single track.

On the Rochester and Syracuse Division (direct road) there is double track from Syracuse to Jordan—seventeen miles, and from Rochester to Palmyra, twenty-three miles, leaving forty-one miles of single track from Palmyra to Jordan. Between Syracuse and Buffalo there are eighty-eight miles of double track and sixty-two miles of single track.

Brunswick Branch of the North Missour Railroad.

The financial condition of the above road would seem to be in a most flourishing condition, and with the small amount of stock for which the books of the Company are now opened in this city, will put the completion of the road beyond all question by the last of April next. The cars will be running twenty-two miles on the road this winter—the distance to Brunswick being only forty miles, from which place the people above on the line of the Missouri Valley Road have already made and are making preparations to extend the road to St Joseph, or some point on the western boundary of the State.

From the statements of the President of the road, and others, members of his Board, stock in this road must pay handsomely. The whole road complete under the contract price will cost something less than $540,000; and when completed will be owned by stockholders representing about $210,000, upon the plan upon which the road is being built which may be explained as follows, to-wit: By virtue of a written contract with the North Missouri Railroad Company the Brunswick Branch Road will receive for five years one-half of the gross earnings upon the whole line of the road from Brunswick to St. Louis, on all freight and passengers to and from St. Louis, whether the same be thrown on the North Missouri Road from any point on the Brunswick Branch, or be destined to any point on the branch road. North Missouri Road furnishing rolling stock. The whole cost of the grading, bridging, and laying the track will amount to about $365,000. To raise this amount the road has of private subscriptions, $150,000; donation in land by Clinton county, $105,000; subscriptions asked for in St. Louis, $60,000; estimated value of town sites, $50,000. Take from the amount of available means, as above, and town sites, the amount of Chariton county donation, $155,000, and you will leave amount of stock owned in the whole road of forty miles in length, $210,000.

The iron is already arranged for, or nearly so, on first mortage bonds on the road, bearing seven per cent., which can be paid off with ease with the earnings arising from the contract with the North Missouri Road, and thus leaving the road owned by a few individuals, to whom large dividends will inevitably be paid. The iron bonds will run ten years, and before the contract with the North Missouri Road shall have expired, it is estimated that the road will have earned enough over and above her debts to buy her own rolling stock.—*St. Louis Repub., Sept.* 12.

Population of New Hampshire.

The Census of this state is completed.—The present population is 326,175; that of 1850, 317,964; making a gain of 8,211. The present population is distributed in the several counties as follows:

Rockingham	50,110	Hillsborough	62,239
Strafford	30,416	Cheshire	27,443
Belknap	18,551	Sullivan	19,089
Carroll	20,476	Crafton	43,273
Merrimack	41,460	Coos	13,169
Total			326,175

Louisville and Nashville Railroad.

Gov. Jno. L. Helm publishes a card in the Louisville papers in which he expresses his willingness to accept the Presidency of the Louisville and Nashville R. R. Co., if tendered to him. He says:

"Feeling the force of the obligations I am under to those who confided in my statements as to the future of this great enterprise, when engaged in its construction, I cannot withhold my consent to enter once more into the service of the Company, if desired by the stockholders."

Chicago and North-Western Railroad.

The grading of the extension of the Chicago and North-western Road, from Oshkosh to Appleton, has been put under contract, at a cost of about $1,400 per mile, payable in the town bonds of Appleton, Neenah, and Menasha, taken in exchange for stock at par. The entire cost of the extension will not exceed $10,000 per mile, and the whole cost per mile of the Chicago and North-western Road, represented in bonds and stock, will be reduced to about $40,000 per mile. The road will be completed to Appleton in December.

Puddling Furnaces Improved.

Mr. Frederick Levick, Coalbrook Vale Ironworks, provisionally specified an invention which consists in so constructing puddling and other reverbatory furnaces that in addition to ordinary fuel employed they may be fitted to receive and burn a mixture of hydrogen and carbonic oxide, produced by passing steam over ignited coke, the waste heat of the furnace being employed to superheat the steam, and heat the coke from which the said gaseous mixture is produced, as well as to heat an ordinary steam-boiler for the supply of steam to a steam-engine. Referring to a balling furnace, he constructs a reverbatory furnace, having a gas-generating apparatus connected therewith, similar to the gas reverbatory furnaces used in Germany and elsewhere. Near the bridge of the furnace, and where the coal gas and air blast meet, or at any other convenient place in the furnace, he delivers a current of the gaseous mixture of hydrogen and carbonic oxide. The flame and products of combustion, after passing over the bed of the furnace, and performing its work in puddling and balling, is made to heat a retort or vessel containing coke, and also a tube through which steam is made to pass from a steam boiler into the same retort. The superheated steam passing over the ignited coke produces a mixture of hydrogen and carbonic oxide, which is conducted from the retort underneath the bed of the furnace, and delivered into the furnace at or near the bridge. The gaseous mixture, in its passage from the retort to the furnace, may pass through a purifier. The waste heat of the furnace may be further employed to heat a steam-boiler, by being made to circulate through or about a vertical or other suitably-shaped boiler. Instead of a gas reverbatory furnace, he sometimes carries his invention into effect in connection with a reverbatory furnace having a fire-grate, and burning solid fuel; and where it is not required to generate steam for a steam-engine, the waste heat of the furnace is only employed for heating the retort, and superheating the retort to be decomposed. Although he prefers to employ his invention as described, yet instead of introducing a mixture of hydrogen and carbonic oxide at the bridge of the furnace, pure hydrogen may be obtained and introduced by charging the retort with fragments of iron instead of coke; and his invention may be employed generally in all cases where it is wished to introduce gas, or mixtures of gasses into reverbatory furnaces at or near the bridges of the said furnaces. The invention is particularly applicable to furnaces used in the manufacture and working of iron, but it is also applicable to reverbatory furnaces used for various other puposes.—*London Mining Jour., Aug.* 18.

Tunneling in Chicago.

We learn that the Pittsburg, Fort Wayne and Chicago, and Chicago and North-western Railroads have revoked their determination of laying down tracks to the new Union depot over the bridge-streets, and concluded to build tunnels in accordance with their plan first contemplated. This is gratifying intelligence to the residents of the West Division, and the action of these roads which seemed likely to provoke a bitter hostility, will now receive the hearty friendship and co-operation of West Siders.

Workmen have already commenced excavating for the tunnel under West Lake Street, and we are told the work will be pushed forward as rapidly as possible.—*Western R. R. Advocate, Sept.* 22.

Railways of France.

According to an article in the *Journal des Chemins de Fer*, the total length of the network of French railways was, on the first of July last, 16,539 kilometres (⅝ of a mile each,) of which 7,880 kilometres were old, and 8,659 new. Of this length, 9,217 kilometres are at work; 5,563 in course of construction, or shortly to be so; and 1,647 only eventually conceded. The sum expended and to be expended amounts to 5,781 millions, of which 3,589,500,000 francs had been employed up to the 31st of December, 1859.

The Mississippi and Tennessee Railroad.

We learn from Niles Merriweather, Chief Engineer on our railroad, that the track will be ready for the cars to the next station below Oakland by the middle of next month. He says the entire road to Granada will be finished by the first of March next. The bridge now being built by the company at Granada will be the best structure of the kind in the State. It is six hundred feet long, built of iron, resting upon stone piers—the stone being brought from North Alabama. The embankment across the bottom is twenty-five feet high and without any tressel work in it.

This road connects Memphis direct with the New Orleans and Great Northern Railroad, and is expected to restore to Memphis the position lost by the construction of the Mobile and Ohio Road, via Grand Junction.—*Panola Star.*

Oil Creek Railroad Company.

The Stockholders organized this company on the 10th ult., and elected T. Struthers President, Orris Hall, Boon Mead, Lewis Arnett, C. B. Curtis, C. B. Wright, Wm. A. Galbraith, Samuel A. Black, S. Olney, Jr., James H. Eddy, C. C. Wetmore, Myron Waters and L. D. Wetmore, directors. The directors appointed John F. McPherson, Secretary and Treasurer.

This is a road much needed and we are glad to see that its management has fallen into the hands of gentlemen so energetic and enterprising. It augurs well for its speedy construction. It will not only be of vast importance to the old producers and lumbermen in those parts who will have their articles carried for half the price it now costs them, but we have no doubt it will be remunerative to the stockholders who shall build it. It is computed that there are now about 400 barrels of oil per day which would pass over it, if constructed, and the probabilities are that the quantity will be doubled or trebled before it can possibly be completed. There will in addition be large amounts of lumber, merchandise stock

and agricultural products to pass over it. The distance between Garland and Titusville, or the length of the road; is said to be about 18 miles, the grade very light and the route favorable to cheap construction. The engineers we understand, will commence the survey next week.—*Warren Mail.*

Grand Rapids and Indiana Railroad.

We have it from good authority that President Lomax has just completed a contract for the iron necessary to lay the track of the Grand Rapids and Indiana Railroad the first 20 miles north of Grand Rapids; and the contracts have been made for the construction of all the road, north and south of this place. These contracts have been made in New York, and we understand are so made as to secure prompt and early fulfillment of them.—*Kalamazoo Telegraph.*

Southern Railroad.

The cars on this road will run to Newton Station, 110 miles from Vicksburg, by the 30th inst., and will be prepared to commence regular business through to Meredian on or about the 1st of November. This will add largely to the business and prosperity of Vicksburg. We learn that East Mississippi begins to count the advantages of getting supplies from that city.—*N. O. Picayune, Sept.* 15.

Suspension Bridge in Kentucky

On the Lexington and Danville Railroad, in Kentucky Mr. J. A. Rœbling is engaged in constructing a suspension bridge, which will form a span of 1,224 feet, from centre to centre, of towers over a chasm 300 feet deep.h

Blue Ridge Railroad.—The Cincinnati Connection.

We learn from the Knoxville *Whig* that Judge Frost, the President of the Blue Ridge Railroad Co., accompanied by Maj. Gwynn the Chief Engineer, recently visited Knoxville and while there, made a verbal report of the progress and condition of the work. The *Whig* says:

The report of the President was most cheering, under all the circumstances, and presented a much more favorable state of things than we were prepared for. Of the $7,000,000 the road is estimated to cost, about $4,000,000 have been expended, so that the work is more than half done. The half of the 196 miles are not complete, but the heaviest work on the road has been under contract, and pressed forward. He assured us that whatever suspicions might exist as to the purposes of the company diverging towards Ducktown and Chattanooga, they had no other purpose, and had never entertained any other, than to complete the main road to Knoxville as soon as it was practicable to do so. True, he said, they desired all the branches and feeders to the main trunk that could be built, and especially was it the wish of the company, as well as their interest, to connect with the Chattanooga and Georgia road, by way of Ducktown. But he repeated that, in good faith, the company would complete the main trunk to Knoxville as soon as circumstances would allow of it. He was agreeably disappointed, and much encouraged, upon his arrival here, to find that the Knoxville and Kentucky Railroad Company had thirty miles of their road under way, and would shortly have the cars running upon a portion of that. He had been out on a portion of that road, and could make an encouraging report to the people of South Carolina, upon his own personal knowledge. He could assure them that before they were through to Knoxville, the prospects were that Knoxville would be through to Kentucky.

He entertained not a single doubt that the South Carolina Legislature would now make them such appropriations as would enable them to progress with the work.

At the close of the Judge's speech, the following resolution was adopted:

Resolved, That our thanks are due, and are hereby tendered to Judge Frost, for his clear and manly exposition of the present condition and future prospects of the Blue Ridge Railroad; and that under his management and direction, we have entire confidence in the completion of the road to Knoxville at the earliest day practicable.

The Hoboken and Newark Railroad.

The contract for the construction of this road, for the grading and other work between Hoboken and the Passaic river, has been awarded to Messrs. Cole, Andrews, and Osgood & Sergeant, the work to be completed and ready for the cars in four months. The railroad bridge over the Hackensack river has already been completed, with the exception of the draw-bridge.

Cedar Falls and Minnesota Railroad.

It is understood that Edgerton & Co. of Boston are to commence grading on the Cedar Falls and Minnesota Railroad immediately. The St. Charles (Floyd County) *Intelligencer* says that the forty thousand dollars of Mitchel County bonds, and the sixty thousand dollars of Floyd County bonds, are to be expended in grading the road in their respective counties the coming fall and winter; and such other means as the company have will be expended at the lower end of the route from Ceder Falls northward.

Railroad Earnings.

The receipts of the Grand Trunk Railway of Canada for the week ending September 15, 1860, was.....$66,943 83
Corresponding week last year..... 51,396 06

Increase.....$15,547 77
Total traffic from July 1, 1860, to date..$642,568 42
Corresponding period, 1859..... 472,650 74

Increase.....$169,917 68

The following are the earnings of the Great Western Railway of Canada for the week ending September 21, 1860:

Passengers.....$56,762 33
Freight and live stock..... 28,548 72
Mails and sundries..... 1,346 40

Total.....$86,257 45
Corresponding week of last year..... 43,425 13

Increase.....$42,832 32

The earnings of the Hudson River Railroad in September, 1860, were.....$180,000 00
September, 1859..... 156,972 80

Increase.....$23,027 34

The earnings in September, 1858, were $140,871 92.

The receipts of the Chicago and North-western Railroad in September, 1860, were.....$81,200
September, 1859..... 51,319

Increase.....$29,881

The earnings of the Chicago and Rock Island Railroad for September, 1860, were.....$130,580
September, 1859..... 114,788

Increase.....$17,792

The gross earnings for the six months ending October 1, were.....$641,738
Expenses, partly estimated.....$350,000
Bureau Valley rent..... 62,500
Interest..... 49,000

$461,500

Net increase.....$130,238

Equal to about 3¼ per cent. The board have however decided that it is inexpedient to declare any dividend at present. The aggregate gross earnings for the year ending 1st July were about $1,100,000, and expenses about $625,000. Interest, rent, &c., reduce the net earnings to about $220,000.

The earnings of the Cleveland and Toledo Railroad in September, 1860, were.....$84,075
September, 1859..... 73,000

Increase.....$11,075

The earnings of the Galena and Chicago Railroad in September, 1860, were.....$221,617
September, 1859..... 208,803

Increase.....$12,814

The earnings of the Milwaukee and Mississippi Railroad in September, 1860, were.....$108,000
September, 1859..... 104,000

Increase.....$4,000

The following is a statement of the earnings of the Buffalo, New York and Erie Railroad (Buffalo to corning) for the month of September, 1860, compared with the same month of last year:

	1859.	1860.
Freight	$34,441 96	$50,343 83
Passengers	15,417 58	15,557 89
Other sources	1,686 86	1,726 46
Total	$51,546 40	$67,628 18

The Michigan Southern Railroad earned in September 1860.....$236,000
September, 1859..... 181,000

Increase.....$55,000

The earnings of the Cincinnati, Wilmington and Zanesville Railroad in—

August were.....$18 759 38
Expenses..... 14,107 33

Net earnings.....$4,652 05
Cash in hand August 1.....$10,936 30
Received during August..... 17,342 29

Total.....$28,278 59

The earnings of the Great Western Railroad Company, Ill., for July 1860 were.....$40,526 39
Earnings for August 1860..... 48,195 23

The Sandusky, Mansfield and Newark Railroad earnings for July, 1860, were.....$17,393 18
Earnings for August 1860..... 18,747 26

The collections in the Land Office of the Illinois Central Railroad Company for the month of September were:

September, 1860.....$80,600
September, 1859..... 55,413

Gain in 1860.....$25,182

The sales of Land for the month of September were:

September, 1860.....$138,600
September, 1859..... 37,836

Gain in 1860.....$100,764

American Railroad Journal.

Saturday, October 6, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

James River and Kanawha Canal.

A proposition has been made by certain French parties for the purchase and completion of this Canal, and the Legislature of the State is to be called together on the 14th of January to consider it. The plan embraces not only the completion and enlargement of the canal, but the construction of a system of docks at Norfolk "similar to those at Liverpool and London." In case the proposition is carried out, then the canal is to become the property of the new company on the payment of a stipulated annuity of $135,000, or of the capital sum of $2,250,000.

The completion of this great work is a most desirable event—but it strikes us living at a distance that, to accept the proposition is the very way to postpone it. To call the legislature together about it, is certainly a ridiculous move. The whole thing will certainly end in smoke, while a large outlay will be incurred to defray the expenses of that august body. For the State, the enterprise may be a very advisable one, from the influence it will exert in adding to the value of its lands, and in increasing its trade. It can, perhaps, well afford to complete the canal, should the investment prove a total loss. Individuals living at a distance, cannot afford to, and will not, upon such an inducement now held forth. The provision for docks at Norfolk, proves the whole thing to be sort of a sham. We have no docks in this city (with the exception of one, the Atlantic,) like those in Liverpool and London. There they are a necessity from limited harbor accommodations. Here they are not, with a commerce quite equal to either of the cities named. The great height of the tides in England is one reason why

docks are necessary. The tides at Norfolk are still less than in New York.

We are sincerely desirous of seeing the James River and Kanawha Canal completed. It would prove of great use to the internal commerce of the country, from the fact that it could be kept open nearly the whole year round. We would not say a word to discourage any adequate attempt to finish it, but it is the height of folly for the people of the State to postpone its completion for years, by listening to propositions that will leave them in the end just where they are now, but really in a much worse condition from disappointments and delays which will certainly result.

History of the Railroads and Canals of the United States.

We give in the first part of this week's *Journal*, another extract from the above work. This we have done in order that those residing at a distance, and who cannot examine the book before ordering it, may have an oportunity of forming an opinion of its merits.

Canals of Pennsylvania.

Pennsylvania was one of the earliest States to engage in works of internal improvement, and had made great progress in the construction of canals before railroads had come to be thought of as the ordinary routes of travel and commerce. In the extent and cost of her water lines, she exceeds any State in the Union, even New York.

The following statement will show the length; cost; earnings and expenses, for the last official year, of all the more important canals of the State.

Name.	Length.	Cost.	Earnings for 1859.	Expenses for 1859.	Net Earnings for 1859.
Lehigh Navigation	84.57	$8,360,279	$672,688	$97,763	$574,925
Schuylkill Navigation	108.50	11,354,475	996,929	521,544	475,385
Union Canal and Branches	99.00	6,125,000	111,894	81,598	30,296

Monongahela Navigation	91.00	905,837	89,957	35,639	54,318
Erie Canal of Penn. & feeder	163.00	1,528,705	95,931	56,912	89,019
	940.87				
Main line of Penn. Canal	276.00	Cost incl. in that of the Phila. & Columbia R. R.			
	1,216.87				

The Delaware Division, North Branch, Wyoming, West Branch and Susquehanna, Erie Canal of Pennsylvania and Main line composed the State system, The Erie Canal was sold to a private company in 1844, the Main line with the Columbia Railroad to the Pennsylvania Railroad Company in 1857, and the other canals above named to the Sunbury and Erie Railroad Company in 1858. The cost to the State of these several works, not including interest, was as follows:

Main line	$8,486,683
Delaware Division	1,543,763
Susquehanna "	897,160
West Branch "	1,833,183
North " "	1,623,117
Upper North Branch Division	5,643,491
Erie Canal	4,533,291
	$24,560,688
Add cost of private works	32,942,782
Total cost of all the canals in the State	$57,503,470

In a pecuniary point of view the investment has been an unfortunate one. The only really productive works have been the Lehigh Navigation, and the Delaware Division Canal. The former, a private work has paid dividends regularly for the past 8 years, and is now productive on its entire cost. The Schuylkill, the next most important work, has paid little, or nothing, on its common stock for 20 years past. The entire investment in the State has not, on the whole, yielded a gross revenue of 5 per cent., while the net income has not been one-half this amount. The work on the "*Railroads and Canals of the United States*," recently published by us, contains a full history of all the canals of the State, and we shall soon take occasion to give a more detailed statement in reference to the several works.

Wharton's Patent Railroad Turn-out.

In the JOURNAL of July 28th, we gave a description of this improvement which is now in general and satisfactory use upon the passenger railways of Philadelphia.

Wherever put down it has proved to be of much practical value, not only from its entire efficiency and reliability, but also upon the score of economy—there now remain but six or seven switch-tenders in all the complicated system of passenger railways in Philadelphia.

It has been adopted by the Girard College Railroad, the 2nd & 3rd st. Railroad, and the 10th & 11th st. Railroad Companies of that city at all their intersections with each other and with the following roads: Spruce & Pine, Race & Vine, Arch & Fairmount, Green & Coates, Chesnut & Walnut, and the Frankford Railroad. Reference may be made to any of these companies.

Covington and Lexington Railroad.

We learn that the work of filling up the track of this road, north of Paris is rapidly progressing. The entire cost of the job will probably not be less than $45,000, and when completed will be one of the finest improvements which has been made upon the line of any road in the country. The frame work for renewing two or three of the most important bridges has also been prepared, and will soon be put in place. The proprietor, Mr. BOWLER, and the Superintendent, Colonel WITHERS, are exerting themselves to put the road in better condition than it ever has been since its opening.

Southern (Miss.) Railroad.

We learn from the Vicksburg *Whig* that the cars on this road will run to Newton station, (Doolittle's) 110 miles from Vicksburg, by the 20th inst., and will be prepared to commence regular business through to Meridian, on or about the 1st of November.

Parkville and Grand River Railroad.

This road commences at Cameron, on the Hannibal and St. Joseph Railroad, and runs over a route, easily constructed, 48 miles to Parkville, on the Missouri river. The contract is let to energetic contractors, who have now graded about 12 miles and are pushing the work with vigor. The road is contracted to be built for $13,000 per mile, ready for the cars.

The assets of the company, are $100,000 Platte county bonds, which contractors take at par, $75,000 Parkville city bonds, at 75 cents; and $170,000, private subscriptions from wealthy farmers along the line; and about $50,000 doubtful, and conditional subscription. The balance, to complete the road, is proposed to be raised, (if the people vote it), by a graduated strip bill, enacted by the Legislature for the special purpose, which proposes to tax 10 miles each side of the road, in the following graduations, to wit:—$\frac{10}{100}$ of the amount to be raised, to be assessed on the 1st mile from the road, $\frac{9}{100}$ on the second, and so on to $\frac{1}{100}$ on the 10th mile. This tax is levied on real estate as benefited.

If sufficient is not raised in this way, it is proposed to raise the balance by issuing 1st mortgage bonds. The road is contracted to be completed next spring. It is strengthened much by being the compromise line, between Leavenworth and Kansas city. Both can connect easily, and thus avoid parallel roads, that so often break down each other. This road has at Parkville the most eligible point to bridge the Missouri, and connects with the Kansas system of railroads. One projected roadtextending up the level plain, on the north side of Kansas river, to Pike's Peak, commanding the trade of Santa Fe, the mining regions, and all the territories westward, to the Pacific Ocean.

The other, branching from the Kansas Valley, and running through that fine belt of country, that extends to Northern Texas, and there to connect with the Texas system of railways. This line would reach the coal, lead, salt and the cattle of the South-West. It is expected Congress will give the usual quota of lands to the territories, to aid these roads. A treaty has recently been made with the Delaware Indians, by which 200,000 acres of valuable land has been obtained to build a railroad, 50 miles west from the Missouri river on the north side of Kansas river through their reserve.

It is hoped a treaty can be made with the Potowatomies, for lands, sufficient to aid in extending the road, to Manhattan, at the mouth of Big Blue.

Kansas is situated in the centre of the U. S. Territory; towards her many of the leading railroads already built, *converge* through the Parkville and Grand River Railroad, and from the position, and the nature of the country, they must *diverge* West and Southwest. This then is the pivot point, the *key* to the commerce of the Western half of the Continent. The railroad movements in this direction, must then be of interest to the entire system, East, to the Lakes, and the Atlantic Ocean.

Atlantic and Gulf Railroad.

The ship Georgia from Swansea, England, and the schooner Eckford Webb, Capt. Freeman, from Newport, Wales, arrived at Savannah on the 4th—the former with 5,891, and the latter with 2,914 bars of railroad iron, for the Savannah, Albany and Gulf Railroad Company.

☞ The New York correspondent of the Philadelphia *Press* says: "In the newspaper way, nothing is more noteworthy than the change that has lately been apparent in the good old *Commercial Advertiser*. I do not mean a change of proprietorship, for that remains intact, but an infusion of vigor and vivacity into its editorial and reportorial deparments, making it one of the freshest and most readable of the evening press. Punctually, as the clocks ticks 4, out comes its third edition, in which everything that happened in town during the day is chronicled in every attractive style. People talk about it. Why shouldn't they? Nothing in the constitution or by-laws against it."

New York, Providence and Boston Railroad.

The annual election of the New York, Providence and Boston Railroad, popularly known as the Stonington, was held at Providence; on the 25th ult. The following gentlemen were unanimously elected directors for the ensuing year: Jas. J. Day, M. Morgan, T. Tileston, S. D. Babcock, W. H. Macy, W. F. Cary, H. Blydensburgh, S. Sloan, N. F. Dixon. The receipts of this company for the year ending August 31, 1860, have been as follows:

Total earnings	$317,166 72
Expenditures	187,529 23
Net receipts	$129,637 49
Net receipts last year	116,028 04
Showing increase	14,603 45
Indebtedness	306,900 00
Less amount held by the company	36,100 00
Total indebtedness	$270,800 00
The benefit derived from the connection of the New Haven, New London, and Stonington Extension Road from through passengers to and from New York to Boston, is	$7,691 00
From passengers to and from connecting roads	20,253 72
From passengers to and from stations on Stonington Road	11,819 85
From freight	5,152 32
Total	$44,917 89

New York and Harlem Railroad.

An arrangement has been effected by the President of this road Allen Campbell, E-q., with the Directors of the New York Central and other Railroads running in connection with it for ticketing passengers between New York and all the principal Western and South-western cities. The new arrangement goes into operation on Monday, October 15th, when the "Lightning Express" trains will be put on the Harlem Railroad, between New-York and Albany; the first leaving this city at 7 a. m. and reaching Albany at 11.45 a. m. in time to connect with trains of the New York Central. The other fast Express train will leave New-York at 5 p. m. and reach Albany in time to connect with a 10 o'clock train from Albany for the West and South-west.

Reading and Columbia Railroad.

The Directors of the Reading and Columbia Railroad met at Ephrata on the 13th ult. Capitalists from New York were present who offered to build the road, including grading, masonry, and superstructure, making it ready for laying the track, for $600,000–$97,000 less than the engineer's estimate. They also offer to take $400,000 of the stock of the road in payment, only asking of the people along the line of the road to take $200,000 of the stock to insure its completion. Of this required sum $140,000 is already subscribed. The length is 43½ miles. A charter of incorporation for this desirable improvement has been obtained, and a large amount of stock subscribed for. The line will open a comparatively new region of country, in which the valleys are rich in agricultural resources, while the not far distant mountains abound in coal and iron. The road will pass from Reading, through Adamstown, Reamstown, Ephrata, Litiz, and Manheim.—*Tribune.*

New Orleans, Jackson and Great Northern Railroad.

The Kosciusko (Miss.) *Chronicle*, of the 7th ult. says:

It is with no little satisfaction that we announce that the work on the extension of the New Orleans, Jackson and great Northern Railroad north of Canton is now in a very encouraging state of progress. Col. Wesson, the energetic contractor for the twenty-six miles of the road north of Mc-Willie's mill, informs us that he has sub-let to experienced contractors the entire distance between Kosciusko and the mill—fourteen miles—that there are eight camps in full blast and about 200 hands at work on the road, that considerable work has been done, and that in about three weeks two more camps will be erected and 200 additional hands be added to the present force. Col. Wesson gives it as his opinion that the cars will be running to Kosciusko by the 1st of December, 1861, if the funds are raised to keep the contractors at work.

The Canton City Passenger Railway.

The completion of the City Passenger Railway from the terminus of the Thames street depot to the grounds of the Canton Company has been announced. The contract for the construction of the road was awarded to Mr. William H. Cathcart, and he has executed the same with fidelity and acceptance. Mr. R. H. Middleton was the engineer, and also discharged his duty with ability.—Throughout the road is laid with double tracks, and passes along the following streets: From the Thames street depot to Ann street, and thence along Alice, Anna, Windsor, Essex, Lancaster, Chesapeake, and Ellicott streets to the city limits, the length being one mile and seven-eights. There are but few heavy grades along the entire route, and the cars will glide smoothly over such well laid tracks, and in addition passengers will have a splendid marine view of the harbor, environs of the city, and the river and bay. Cars have not yet commenced running, but it is understood that in the course of a few days a number will be placed upon the road, and connect with those which run upon the other roads. The cars are now receiving the finishing touch, and upon each side will have painted in large letters—Thames street to Canton.—*Baltimore American.*

Dubuque, Marion and Western Railroad.

We see by the Anamosa *Eureka* that between sixty and seventy hands are at work near the town grading the track for the Dubuque, Marion and Western Railroad. Men are at work on all the contracts between that place and Springville.

Colonel Alexander Worrall has resigned the Superintendency of the Richmond and Danville Railroad, to become Chief Engineer of the Kansas Central Railroad. Colonel Worrall is said to be one of the most accomplished constructing Engineers in the country.

The Sandersville *Georgian* is informed that Mr. R. R. Cuyler President of the Central Railroad, contemplates building a road from some eligible point on the Central road through Sparta to Union Point on the Georgia Road. This would make, in connection with the Georgia R. R., and Georgia Central, an air line from Atlanta to Savannah.

We learn that there is great demand for rolling stock upon Western Roads. An order was recently given for five locomotives and one hundred cars for the Mississippi and Missouri Road. The Davenport *Gazette* of the 10th says that 22 miles of road west of Iowa City are in use, and that Marengo will be reached Oct. 2, completing 137 miles. Eight hundred men are now at work on the line. This new line is a great feeder to the Rock Island Road, and its early completion has stimulated much of the recent buying of Rock Island stock.

Illinois Southern Railroad.

We learn from the Philadelphia *Press* that the iron for 25 miles of this road leading from Vincennes to Mound City, will be shipped during the present week by Wood, Morrell & Co., of the Cambria Iron Works. The prospects for an early completion of this important road now appear to be flattering.

Hudson River Bridge Company.

The following gentlemen have been elected directors of this company:—Erastus Corning, Albany; Dean Richmond, Buffalo; Samuel Sloan, New York; Chester W. Chapin, Springfield; William H. Swift, Boston; Edmund H. Miller, New York; Sidney T. Fairchild, Cazenovia; Henry H. Martin, and Gilbert L. Wilson, Albany.

TEN WHEEL LOCOMOTIVE.

NOTICE TO RAILROAD COMPANIES.

WHEREAS Letters Patent of the U. S. have been issued to Septimus Norris for the Ten Wheel Locomotive Engine, having six driving with two, or four truck, or guide wheels, RAILROAD CORPORATIONS AND BUILDERS of Locomotives, will take notice that Richard Norris & Son, of Philadelphia, having taken a license, are the only persons as yet authorized to build or use said patent. BUILDERS making, and COMPANIES using (unless by special license,) render themselves liable for INFRINGEMENT of PATENT. Particulars concerning terms, may be had of

OCTAVUS J. NORRIS,
AGENT FOR THE PATENTEE,
3m38 1803 Spruce St., Philadelphia.

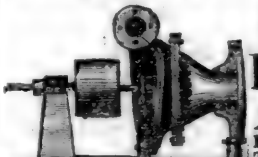
LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.				SHEET No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft.	Slop.	1¼ to 1
				14.	" 20	"	1½ to 1
2.	For Side Hill Cuts and Fills.			15.	" 24	"	¼ to 1
3.	Base 12 ft.	Slopes	1¼ to 1	16.	" 24	"	1½ to 1
4.	" 14	"	1½ to 1	17.	" 25	"	1½ to 1
5.	" 15	"	¼ to 1	18.	" 26	"	1½ to 1
6.	" 15	"	1 to 1	19.	" 28	"	¼ to 1
7.	" 15	"	1½ to 1	20.	" 30	"	1 to 1
8.	" 16	"	¼ to 1	21.	" 30	"	1¼ to 1
9	" 16	"	1 to 1	22.	" 30	"	1½ to 1
10.	" 18	"	¼ to 1	23.	" 32	"	1 to 1
11.	" 18	"	¾ to 1	24.	" 32	"	1¼ to 1
12.	" 18	"	1 to 1				

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c. each;** or the whole, handsomely bound in cloth, in one volume, for **$7.50.**



ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT
Centrifugal PUMPS

ARE the best and cheapest Pumps made for **RAILROAD STATIONS, MINES, FACTORIES, TANNERIES, PLANTATIONS, DRAINAGE, IRRIGATION, WRECKING,** and general use.

Made entirely of metal, without working valves or rubbing surfaces, they pass sand, fine ore and gravel, without injury. Capacity from 20 Galls. to 1,000 Bbls. per minute.

For descriptive pamphlet and Price List address

NEW YORK.

The Southern Oil Company.
OFFICE No. 60 NEW ST.,
NEW YORK.

SUPERIOR CAR BOX OIL,
At 25 per cent. below the cheapest Lubricating Agent in use.

THE Oil is chemically **pure;** is entirely free from Gum and Acid; and at thirty-eight degrees below freezing point retains its perfect limpidity.
LOSEE & BOGERT, Agents.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and
WILL NOT GUM.
In no case has it failed to meet the approval of the consumer.
The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor
F. S. PEASE, 61 Main st., BUFFALO.
Reliable orders filled for any part of the United States or Europe.

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST.,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 43 Pine st., New York City.

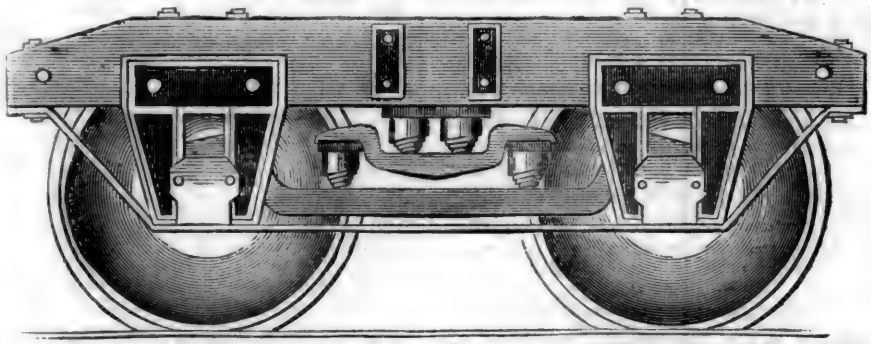
STEEL CAR SPRINGS,

MANUFACTURED BY THE

PATENTEE,

Carlos French,

SEYMOUR, CONN,



THESE SPRINGS are now in use on many of the leading Railroads East, South and West. Samples can be examined and Price Lists obtained at No. 5 Gold st., NEW YORK.

THE METALLIC CAR SPRING COMPANY

OF NEW YORK,

Manufacturers of PATENT CONICAL VOLUTE STEEL CAR SPRINGS.

OFFICE, 54 WILLIAM STREET, NEW YORK,

WITH increased capital and facilities, and ability to meet all orders promptly, this Company respectfully invite the attention of Railroad Managers, Car and Engine Builders, and others interested in Railroad Machinery and Economy, to these Springs, and the improvements in their application. Orders and correspondence solicited.

CHARLES D. GIBSON, Treasurer. COURTLANDT PALMER, Pres't.

Jan. 14, 1860. RICHARD VOSE, Secretary.

JAMES JEFFRIES & SONS,

MANUFACTURERS OF

LOCOMOTIVE, CAR AND TANK

SPRINGS,

PHILADELPHIA, (rear of Girard House.)

New York Central Railroad Company.

STATE SUIT FOR BACK TOLLS.

We publish below the answer of the New York Central Railroad Committee to the complaint filed by the Attorney General of the State in the suit brought against the company to recover $5,000,000 back tolls which are claimed for the canal fund:

SUPREME COURT.—The People of the State of New York agt. the New York Central R. R. Co.

First: The defendant, answering the complaint of the plaintiff in the action above entitled, denies that the defendant is subject to the provisions of section 29 of the act of the Legislature, entitled "An act to authorize the formation of railroad corporations and to regulate the same," passed April 2, 1850, referred to in said complaint.

The defendant, further answering, denies each and every allegation in said complaint, in regard to tolls referred to in said complaint, forming, becoming, or being a part in the revenues of the State Canals.

And the said defendant, further answering, denies that the tolls collected under and by virtue of the act passed May 12, 1857, accruing during the period of canal navigation, were derived and arose from freights, appurtenant and belonging to the said canals, as is alleged in the said complaint.

And the defendant, further answering, denies that there is no other mode by which the said freight could or would be transported, except the said railroad and the said canals, as is alleged in said complaint. And the defendant says that, without said canals and railroads, very much of said freight could and would have been transported by other modes and through other channels, some of which have been made and opened by the authority and aid of the plaintiff, by which large amounts of trade and business have been diverted from said canals and railroad.

The defendant, further answering, denies that the Syracuse and Utica Railroad Company was required by its charter to pay tolls into the Canal Fund, and as to the allegations, in said complaint, stating that said several Railroad Companies assumed the obligations imposed by the said act, passed May 4, 1844, and carried and transported large quantities of freight, and paid into the Canal Fund large sums of money for tolls by said act imposed, the defendant says that it has no knowledge or information sufficient to form a belief as to said allegations, or any or either of them, or any part thereof.

The defendant, further answering, denies each and every allegation in said complaint alleging that the railroad companies referred to in said complaint or any or either of them after December 1, 1851, carried freight subject by law to the payment of canal tolls, and said defendant further denies that such tolls amount to the sum of $5,000,000, or any other sum.

Second: And for a second and further defense, the defendant, further answering, says that the cause of action mentioned in said complaint, so far as it embraces a claim to recover tolls on freight carried by the several railroad companies consolidated into the corporation defendant, and also as to a large portion of the claim for tolls on freight carried by the defendant since such consolidation, did not, nor did any part thereof accrue within six years next before the commencement of this action, and the defendant says that all that part of the cause of action mentioned in said complaint for tolls on freight carried more than six years before the commencement of this action, is barred by the Statute of Limitations.

Third: And for a third and further defense, the defendant further answering says that, on the 10th day of July, 1851, the Legislature of the State of New York passed an act entitled "An act to abolish tolls on railroads;" that the question on the final passage of said act in each House of the Legislature was taken by Yeas and Nays, which were duly entered on the journals thereof, and three-fifths of all the members elected to either House of said act in such House, and voted for the same.

That said act was duly approved and signed by the Governor of said State, and ever since has been, and is now, a valid law of said State; that said act provided that it should not be necessary for any railroad company in this State to pay any sums of money into the treasury of this State on account of the transportation of property on any railroad on and after December 1, 1851, nor to make to the Comptroller monthly statements of the property carried on its railroad; and said act repealed all acts and parts of acts requiring the payment of State tolls by any railroad company for the transportation of property on any railroad, after said first day of December, so far as they conflict with said act; and the defendant says that this action was commenced and is prosecuted without the authority of the plaintiff.

Fourth: And for a fourth and further defense, the defendant further answering says, that all those parts of the acts passed May 7, 1844, and May 12, 1847, referred to in said complaint, and all other acts of the Legislature requiring the payment of State tolls by any railroad company for the transportation of property on railroads, are void for the reason that they are in conflict with sections 8, 9 and 10 of Article 1 of the Constitution of the United States; and the defendant says that the power to alter or repeal the said acts of May 7, 1844, and May 12, 1847, was reserved therein respectively.

Fifth: And for a fifth and further defense, the defendant further answering, says that on the 10th day of April, 1850, the Legislature of this State, in due form passed an act entitled "An Act to authorize the transportation of live stock and fresh meats on railroads, free from canal tolls," by which it is enacted that neat cattle, horses, sheep, and pork meat might, after the passage of said act, be transported upon any railroad in this State, without being liable to the payment of canal tolls, and that the same should take effect immediately, which act, from the day of its passage, has been and is yet a valid law of this State.

The defendant further answering, says, that in the years 1853 and 1854 the plaintiff amended the State Constitution by providing a substitute for Section 3 of Article 7 of said Constitution, by which substitute the plaintiff, among other things authorized the Canal Board, with the concurrence of the Legislature, to reduce the rates of canal tolls, and to remove them entirely in its discretion, whereby the plaintiff ratified the said acts of the Legislature of April 10, 1850, and July 10, 1851.

The defendant further answering, says, that since the adoption of the present Constitution of this State the Canal Board, with the concurrence of the Legislature, has reduced the rates of tolls on property transported on the State canals so as materially to diminish the revenues of the canals and the plaintiff's officers and agents have otherwise misappropriated, diverted and squandered

said revenues, and as to the allegation in said complaint that the State canals are unfinished, and that the State debt is unpaid, the defendant, upon information and belief, avers that, but for such reduction, diversion, misappropriation, and squandering of said revenues, the requirements of Sections 1, 2, and 3, of Article 7, of said Constitution would have been fulfilled, and the State canals would have been finished.

The defendant further answering, says, that the rates of tolls for property transported on the State Canals have been frequently changed by the authority of the plaintiff since the passage of the aforesaid act of July 10, 1851, and that since the passage of that act the Canal Board has made no rules or regulations as required, by sections 4 and 5 of said act of May 7, 1844, and by section 4 of said act of May 12, 1847, and that the Commissioners of the Canal Fund have never in any way since said act of July 10, 1851, until May 4, 1860, made any rule or regulation or direction, as required by section 3 of said act of May 7, 1847.

The defendant further answering, says that, relying upon the validity of the aforesaid act of July 10 1851, the defendant accepted its charter and has contracted large obligations for which its bonds are now outstanding unpaid, and has charged and received compensation for carrying property on its railroad (which compensation has been less than it would have been if said act of July 10, 1851, had not been passed) and has issued scrip for its capital stock, large amounts of which have been bought and sold by its stockholders relying upon the validity of the said act of July 10, 1851.

The defendant, further answering, says that it will suffer damage to a large amount if said law of July 10, 1851, is declared void, and the defendant claims and insists that the plaintiff is, by its acts above mentioned; in the passage of said acts of the Legislature of April 10, 1850, and July 10, 1851, and by its good faith thereby solemnly pledged to the defendant; in the amendment of the Constitution of the State, in the omission of the Canal Board and the Commissioners of the Canal fund, to adopt rules as above stated, in the reduction and alteration of the rates of tolls on the State canals as above stated, and by its conduct in authorizing and aiding in the construction of other channels of trade by which business has been diverted from said canals and defendant's railroad *estopped*, in equity and by the law of the land, from denying the validity of said act of its Legislature, passed July 10, 1851. S. T. FAIRCHILD, Def'ts Att'y.

Albany County, ss.—GILBERT L. WILSON, being duly sworn, says that he is the Treasurer and the Secretary of the New York Central Railroad Company, named as defendant in the foregoing answer, and that said answer is true to deponent's knowledge, except as to those matters stated upon information and belief, and as to those matters he believes it to be true.

GILBERT L. WILSON.

Sworn before me, September 17, 1860.

J. STERNBERGH Commissioner of Deeds for the City of Albany.

Illinois Central Railroad.

The Illinois Central Railroad Company's sales of lands last month, were larger than in any single month since 1856; and it is quite evident that a steady emigration to this State of practical farmers is now going on. The number of acres sold were 8,495 for $137,902.16. These are divided among 127 purchases, being an average of about seventy acres to each. The desire to purchase whole sections of land, has caused the ruin of many a settler in our State, and this feature of the present sales is very important. Eighty acres are quite enough for the maintenance of a family, and we are glad to see a class of buyers who are not likely to overburthen themselves with debt. The Company's terms are upon a credit of from four to seven years, with interest at six per cent per annum in advance. Thus the purchaser of 80 acres at $12 pays about $60 per annum for the first three years, and subsequently annual payments of about $250, which secures him a valuable homestead.—*Chicago Tribune.*

Androscoggin Railroad.

The work upon the extention of the Androscoggin Railroad form Leeds to Topsham, Me., is pressed forward with vigor. The citizens of Sabattasville wish the road to pass through the village, and offer to give $1,300 to accomomplish the object. The grading of the road between Lewiston and Topsham is to be finished by the first of next July, and it is confidently expected that the road will be ready for traffic by Sept. 1st, 1861. It has not yet been determined whether the track is to be the narrow or broad gauge.—*Boston Journal.*

The Giffard Injector.

MESSRS. WILLIAM SELLERS & Co., of Philadelphia are the sole manufacturers of "*Giffards patent Feed Injector*, for filling Steam Boilers." They are now making a number of the proper size for locomotives. The following descriptions of it is from the *Engineer*:

As fitted to locomotives, the Injector, which is made of brass throughout, stands upright on the back side of the firebox, close to the reverse lever. In shape it resembles an ordinary locomotive pump barrel, being about 3 feet 6 inches high, and averaging about 3½ inches in diameter. A 1¾ inch steam pipe enters it near the top, and a feed pipe of the same size passes out at the bottom and into the boiler. On one side are two pipes, also 1¾ inches in diameter, through the upper one of which the water enters the instrument, while the lower one serves as a waste, or overflow pipe.

A hollow cylinder, with a tapering nozzle at its lower end, like that of syringe fills the bore of the upper part of the instrument. By a 5 threaded screw of 2½ inch pitch, this cylinder may be raised or lowered 2½ inches, by a single turn of a handle at the top of the Injector. This internal cylinder is preforated with a number of holes opposite the entrance of the steam pipe, and through these holes the steam enters the cylinder. A conical plug, or valve, on the end of a rod passing down through the centre of the cylinder closes the nozzle at the bottom. By raising this valve, (also by means of a screw and handle at the top of the Injector,) steam will be discharged downwards from the nozzle. This nozzle is placed concentrically within another one of similar form—both being enclosed in the main barrel of the Injector, and the intervening annular space between the two nozzles, is in communication with the water pipe from the tender. The discharge of steam from the nozzle of the movable cylinder, through the fixed nozzle below, produces a partial vacuum, and draws water through the water pipe, even if its upper end be some feet higher than the level of the water in the tender. The water once raised, it is discharged, together with the steam, from the second nozzle described. It is here that the wonderful action of the Injector commences.

However we may have succeeded in making our description clear, all is simple enough up, or rather down to this point, to wit: the point of the fixed discharging nozzle, seven-sixteenths of an inch in diameter. This nozzle is open to air, the barrel of the Injector being provided with air holes at this place. A short distance, say ¾ inch below the fixed nozzle, is another pointing upwards. This nozzle is slightly flared at the upper end, where it is perhaps ¾ inch in internal diameter, but it is immediately contracted to five-sixteenths inch, from which diameter it enlarges gradually downward, until a few inches below it opens to the diameter of an ordinary check valve, closing the entrance to the boiler. Now, all we can say is, that the jet of mingled steam and water, discharged from the upper fixed nozzle, passes for ¾ inch through the open air, and that it then enters the lower fixed nozzle with such energy, as practice has shown, as to force its way into the boiler, under the same pressure of steam as that under which the steam, admitted at the top of the instrument, was taken. Even more than this, experiments have been made, in which steam taken from one boiler, at a pressure of 24½ lb. per square inch, forced water through the Injector into another boiler, working at 48½ lb. pressure. The great momentum imparted to the water at the moment when it issues from the upper fixed nozzle, has not been explained to the entire satisfaction of practical men, but of the fact itself there is no doubt.

In starting the Injector, the handle by which the internal movable cylinder is raised is first turned so as to admit a greater or less supply of water, according to the pressure of steam in the boiler. (The Injector has been worked with a boiler pressure of 5 lbs., but only a small quantity of water could be admitted.) The handle of the conical steam valve is then turned slightly, so as to lift the water from the supply pipe, after which the steam is turned on with force corresponding to the quantity of water to be admitted. It is found that the Injector requires blowing through with steam, so as to warm it, before it will start properly into action. This, however is but the work of a few seconds, and the most inexperienced firemen will soon learn all the habits of the instrument.

The last advices from England show not only that locomotives are being made without pumps, but also that only a single Injector is being applied in their place. It was supposed, from the force of habit, that two would be necessary. The apparatus works readily with steam of 140 lbs. pressure, and will work, indeed, at any pressure. It will raise feed water already warmed to 100 deg., throwing it into the boiler at nearly the boiling point. It gives a graduated supply of feed water, being capable of almost the same range of action as the ordinary pump. The feed water entering the boiler at a high temperature, does not check the production of steam or cause leaking, as when a great quantity of cold water is suddenly pumped in. On the St. Helen's Railroad, in England, Mr. Cross, the locomotive superintendent, found last winter that while the pumps of his engines were frozen, the Injector was always in working order in the coldest weather. On many English lines the use of donkey pumps was becoming general but the Injector supersedes these, as it is at all times available for use wherever steam and water are to be had for working it. On the North London and some other English roads, a considerable saving is attributed to the Injector, by reason of the facility by which its working may be adjusted to the condition of the fire. If all these advantages are realized here, the introduction of this wonderful apparatus of M. Giffard must be rapid and satisfactory.

Pittsburg, Fort Wayne and Chicago Railroad.

Going to and returning from Cincinnati a few days since, we were astonished at the improvement in the whole line of road between the two cities. The improvement in the track of the Columbus and Xenia railroad was marked and decidedly agreeable to the travel. But we specially noted the smooth track and regular running of the train on the Pittsburg, Fort Wayne and Chicago Railroad, between Pittsburg and Crestline, a distance of 188 miles, which we accomplished in six and a half hours. The busy scene all along the line of the road of the sons of labor, with their spades, picks, tamping bars, chairs, spikes and new rails accounted for the easy rides, but did not so forcibly impress us with the amount of labor necessary to accomplish the work, as the following figures which we obtained from an authentic source: From the 1st of May to the first of September there has been used in the track of this Road between Pittsburg and Crestline, 208,166 feet of new rails, or about 40

miles; 91,455 feet of repaired iron, or about 17⅓ miles; 142,221 new cross-ties or about 70 miles. We understand that the operation or renewal of track, will be actively continued through this and next month.—*Pittsburg Post.*

Journal of Railroad Law.

OF THE INHERENT POWER OF A RAILROAD CORPORATION TO BORROW MONEY AND GIVE NOTES AS SECURITY.

The general power of a corporation to make and endorse negotiable paper, as a necessary incident to their power of incurring debts, has recently been considered by the Supreme Court of the State of New Jersey, in the case of Lucas *vs.* Pitney. The action was brought by the Plaintiff, as holder of a promissory note, against the defendant as maker; the note being for $1,604 24, bearing date April 2d, 1855, and payable two years after date, with interest semi-annually, to the Camden and Atlantic Railroad Company, and endorsed in the name of said company by Robert Frazer, Treasurer.

It appears from the evidence that the Treasurer was in the habit of endorsing the notes of the company, and this note was endorsed in the usual manner; but there was no resolution of the company authorizing him to endorse the notes of the corporation and he had no authority except what the law would attach to his office; although this mode of making endorsements had been acknowledged by the company, and the existence of this note was known to the board of directors.

It was the custom of the company to borrow the notes of its directors, endorse the notes thus borrowed, and raise money upon them. Sometimes, however, negotiations would be made for a particular amount, requiring the names of certain of the directors. In such cases, in order to equalize the liabilities of the several directors, those whose names were not required for that particular transaction would give the company their notes, to be negotiated in any way. This note arose from a transaction of this kind. On the 15th of August, 1854, the defendant gave his note, at four months, for $3,546 59. This note was never negotiated; Mr. De Costa, the President, took it for the purpose, but did not do so; when it came due, it was renewed by two notes, one of which was for $1,604 26, and as the company were then indebted to De Costa, he took this note as collateral security. This note was renewed several times afterwards as it came due, until the last renewal, when De Costa took it for its amount in payment of what the company owed him; this was after he ceased to be President of the company.

The jury, without argument and without leaving the box, rendered a verdict for the plaintiff for $1,661 80, subject to the opinion of the Supreme Court at bar. The cause was argued in 1858, and the following opinion, rendering judgment in favor of the plaintiff, delivered.

GREEN, HENRY W. C. J. This action was brought to recover the amount due upon a promissory note, made by the defendant, payable to the order of the Camden and Atlantic Railroad Company, and by them endorsed. Upon the trial a verdict was taken for the plaintiff subject to the opinion of this Court upon the case made by the evidence. The only point submitted for the consideration of the Court is, whether the Camden and Atlantic Railroad Company, to whom the note was made payable, and by whom it was endorsed, have power to receive or to transfer commercial paper.

The charter of the Camden and Atlantic Railroad Company confers upon them the ordinary powers of a Railroad Company. By the 15th section, it is enacted, "that the said corporation shall have power to borrow such sums of money, from time to time, as shall be necessary to build, construct, or repair said road, and furnish the said corporation with all the necessary engines and machinery for the uses and objects of the said company, and to secure the payment thereof by bond or mortgage, or otherwise, on the said road, lands, privileges, franchises, and appurtenances of or belonging to said corporation, at a rate of interest not exceeding seven per centum per annum; provided that it shall not be lawful for the said company to plead any statutes of this state against usury in any suit in law or equity instituted to enforce the payment of any bond or mortgage executed under this section."

This section, it is insisted on the part of the defendant, is a limitation of the power of the company to borrow money for specified purposes and in the mode designated, and that it is tantamount to a prohibition of the company's borrowing money for any other purpose or upon any other security than that specified.

It is clear, however, that the 15th section of the charter was designed not as a limitation or restriction of the powers of the corporation, but as a grant of additional power. It authorizes the company to borrow such sums of money as shall from time to time be necessary for the construction, repair and equipment of the road, and to secure the repayment thereof by bond, mortgage, or other security on the road and franchises of the corporation, at a rate of interest exceeding the rate established by law. The corporation are clothed with powers which, independent of that provision, they could not have exercised. But there is nothing in the provision which, by necessary implication or by fair intendment, can be construed to limit the general powers and capacities incident to any corporation. The question, therefore, of the power of the corporation to give or endorse the note in question must be decided in view of the *inherent powers* of the corporation, irrespective of the special provision contained on the section alluded to.

On the part of the defendant, it is insisted that a corporation can make no contract which is not necessary to enable it to answer the object of its incorporation; that the loaning of money, or the borrowing of notes to be discounted in market, is not necessary to the operation of a railroad company; and that, consequently, the making or indorsement of commercial paper by such company, as a security for money loaned, and the endorsement of notes borrowed for the purpose of raising money, are void acts.

The simple inquiry is, whether a railroad company has, as a necessary incident, the inherent power of borrowing money for the payment of its debts or for its necessary purposes. It is conceded that the corporation has such powers only as are expressly conferred by charter, or necessarily incident to those powers. If it may lawfully contract debts, it would seem clear that it may enter into obligations to pay those debts, or borrow money for that purpose. The power of incurring debts, in the course of its legitimate business, of giving notes, or borrowing money for the payment of such debts, would seem necessarily incident to every corporation whose business involved the expenditure of large sums of money, and often upon sudden and unforeseen contingencies. Such, it is believed, is the universal custom of all important corporations, whether private or municipal. The authorities in support of the practice are abundant. Our statute recognizes bodies politic or corporate as persons by whom promissory notes and bills of exchange may be drawn, endorsed, and accepted. The technical doctrine, that a corporation can contract only under its corporate seal, was long since exploded.

* * * * * * * * * *

The result of the authorities, to adopt the language of a recent writer, seems to be, that corporations carrying on business under no restraining act, may make promissory notes and draw bills of exchange, where these are the usual and proper means to accomplish the purposes of their organization; that such notes and bills are to be presumed legal and valid where they are not prohibited by law, and are received in good faith; and that they are invalid when given in violation of law, or when given for purposes wholly foreign to those for which the corporation was created. The note in question was given as a renewal of accommodation paper originally given by the defendant, being one of the directors of the company, to raise money to pay the debts of the corporation. It was subsequently transferred by the company to one of its creditors, in payment of a debt due, with the knowledge and assent of the defendant. There is no pretense in the evidence, either that the indebtedness of the company, which the paper of the defendant was originally designed to satisfy, or for the payment of which the note in question was eventually transferred by the company, was not incurred in the course of its regular and lawful business.

We are of opinion, therefore, that the railroad company were authorized to hold and transfer the note in question, and that consequently the plaintiff is entitled to judgment upon the verdict.

Traveling in the United States One Hundred Years Ago.

The ancient advertisement, of which we here give a literal copy, is deserving of preservation on account of the quaintness of the inn signs, the peculiarity of the spelling and diction, the "shifting" of the passengers which it announces, and the general idea it gives us of the way in which traveling was performed in America at the time in which it was issued:

Philadelphia STAGE-WAGGON, and New York STAGE-BOAT perform their Stages twice a Week.

JOHN BUTLER, with his waggon, sets out on Mondays from his House, at the sign of the Death of the Fox, in Strawberry Ally, and drives the same day to Trenton Ferry, when Francis Holman meets him and proceeds on Tuesday to Brunswick, and the passengers and goods being shifted into the waggon of Issac Fitzrandolph, he takes them to New Blazing Star to Jacob Fitzrandolph's the same day, where Reuben Fitzrandolph, with a boat well suited, will receive them and take them to New York that night. John Butler returning to Philadelphia on Tuesday with the passengers and goods delivered to him by Francis Holman, will again set out for Trenton Ferry on Thursday, and Francis Holman, &c., will carry his passengers

and goods, with the same expedition as above to New York. March 8, 1759.—*Weekly Mercury.*

Lehigh and Delaware Water Gap Railroad.

Oliver W. Barnes, Esq., Civil Engineer, in a report made to "the President and Directors of the Lehigh and Delaware Water Gap Railroad Company," bearing date September 27, 1860, says:

"In compliance with your wishes, I have made a careful examination of that portion of your route extending from its commencement, at the terminus of the Shimersville Branch, opposite Freemansburg to Easton, from which your line diverges, and immediately crosses the Lehigh river and canal at an elevation sufficiently above high-water mark. It is proposed to erect a bridge of three spans of 140 feet each over the river, and a single span of the same length over the canal. From this bridge the line passes through a deep cutting, about half completed, at Freemansburg; thence it follows the north bank of the Lehigh upon a rocky side hill above the canal, where it will be necessary to cut the whole roadway out of the solid rock, owing to the canal having been excavated from the base of the hill. The line has been carefully located at these difficult points by Mr. P. Brady, your engineer in charge of the work, and, when completed, will make a permanent roadway. This character of ground continues for about two miles, whence we emerge into open cultivated ground, rendering the construction easy until we reach the fifth mile from Freemansburg; thence the line again follows steep side hills all the way to Easton. The cuttings, for the greater portion of this part of the line will be in solid rock; wherever embankments are required, retaining walls will be necessary on the lower side. A county road for several miles is much in the way, but can be constructed on different ground above or below the railroad line.

Upon entering Easton, we approach Third street through coal yards and wharf property at a sufficient height to enable us to trestle over them, and render them valuable as coal depots, in connection with the railroad, and not impair their value for wharf purposes.

With no grades exceeding 21 feet per mile, and curves of large radius, a good single track road and turnouts can be constructed on the route, as above described, 13 feet wide in excavations, and 12 feet wide on embankments, at grade, with good masonry and a substantial Howe truss bridge superstructure across the Lehigh, nine and a-half miles of main track and sidings, laid with crossties 8 feet long, 6 by 8 inches on 6 inches of ballast 9 feet wide, and a T rail weighing 60 lbs. to the lineal yard, for the following cash estimate:

Graduation, masonry, bridging, ballasting, cross-ties, chairs, spikes, switch fixtures, and track-laying	$166,000
900 tons of T rail, 60 lbs. to the yard, at $45 per ton	40,500
Engineering and general expenses	8,300
Total	$214,800
Add cost of work done and engineering and general expenses to this date	25,000
And you have the cost of the whole railroad	$239,800

It may be proper to say, in this connection, that the Shimersville Branch will require some repairs and adjustment, probably not exceeding a cost of $3,000. The cost of the right of way and land damages is not included in the foregoing estimate. Some slight changes of alignment can be made without injury to the road, which will materially reduce this item. * * *

The extension of your line, from Easton, 21 miles up the Delaware to the Delaware, Lackawanna and Western Railroad, at Marshfield, will form valuable connections, give a direct route from Philadelphia to the whole Wyoming Valley and to Scranton, 145 miles in length, superior to any other existing route, and 20 miles shorter than the present route via Trenton and Belvidere. The distance from Scranton, Great Bend, and all points on the New York and Erie Railroad to Philadelphia, by your road, will be precisely the same as to New York via the Delaware, Lackawanna and Western and New Jersey Railroads, and much superior to that route in grades and alignment."

Erie Canal.

Am'nt received for tolls in the month of September, 1860	$469,515 50
Do. in 1859	245,290 41
Increase in 1860	$224,225 09

Do. in 1859	72,529 80
Increase in 1860	$13,370 86

Cleveland and Toledo Railroad.

The following circular, urging upon the stockholders the early funding of the small remainder of the floating debt of this company, has been issued by a committee of the Board of Directors:

OFFICE CLEVELAND AND TOLEDO RAILROAD COMPANY, Oct. 6, 1860.

DEAR SIR: For the purpose of enabling this company to pay off its floating debt, and place its financial affairs on a permanent basis, so that its future earnings, after paying the interest on its bonds, can be appropriated to the payment of dividends on its capital stock, the Directors (under the authority of the Stockholders at their June meeting) have authorized the sale of $300,000 of the Sinking Fund Mortgage Bonds of the company to Stockholders, at 35 cents on the $1, and interest which has accrued the bonds since July 1, 1860. Payments to be made as follows: Ten per cent. on or before the 1st of November next, and the balance in five equal successive monthly instalments, receiving on the bonds on the last five instalments in proportion to the payments and the first payment of 10 per cent. to be applied on the last instalment. Payments to be made to Messrs. Carpenter & Vermilye, No. 44 Wall street, New York, who are authorized to receive the money for the company and deliver the bonds. The subscription will not be binding unless $250,000 of bonds are subscribed for, and not exceeding $300,000 of the bonds will be disposed of. The undersigned are of the opinion that with this arrangement carried out, and the increasing traffic of the road, dividends can be resumed by the company at no very distant day.

Please sign the annexed proposal, with the amount you will take, and forward the same to Messrs. Carpenter & Vermilye, New York.

JOHN GARDINER, Pres't P. T.,
W. M. VERMILYE.
G. T. OLYPHANT,
A. A. RAMSDELL,
Committee of the Board.

Railroad Matters at Trenton, N. J.

The Trenton *Democrat* says: "The Camden and Amboy Railroad will soon make a commencement on their new road between this city and Dean's pond. We believe the route has not yet been definitely determined, although five or six have been surveyed. Its starting point from the canal, south of the Assanpink, is fixed, and the road will, probably, pass near Hutchinson's mill, south of Baker's basin, about two miles south of the canal at Port Mercer, and from two and a-half to three miles south of Princeton basin, thence in nearly a straight line to Dean's pond. This route will leave Princeton some four miles distant from the nearest railroad station, and will, of course, give a new impetus to the agitation for the road from Trenton to Princeton and from Princeton to Dean's pond. In connection with this straightening of the track, it is, we understand, the intention of the company to construct a branch from the Trenton and New Brunswick to the Camden and Amboy road, thus making a direct route from Trenton to Amboy, with a view of making South Amboy a great depot for coal, to be transported over the Lehigh Valley, and Belvidere Delaware and the Camden and Amboy roads to that point."

Blue Ridge Railway.

The above railway will be completed to Walhalla, twenty miles, in December next, which will give thirty-five miles of completed road. Over two and a half millions of dollars have been expended. Several very important and costly tunnels are in process of excavation. Three of these are in South Carolina, varying in length from 616 feet to about a mile. In South Carolina, three fourths of the grading, one-third of the tunnel excavation, three-fourths of the square drain masonry, and one-fourth of the bridge masonry have been done, and one-fourth of the track laid. There has also been laid a track to Hayne's Quarry, 1½ miles long. In Georgia, seven-seventeenths of the grading, one-seventh of the tunnel excavation, and two-thirds of the square drain masonry, and two thirds of the bridge masonry have been done. The length of the road in South Carolina and Georgia is only 20 per cent. of the entire length, and its cost will be 58 per cent, of the whole cost of the road. The estimated cost of the entire road is $7,000,000, and the able and intelligent engineer, Walter Gwynn, in his latest reports, sees nothing to change the estimate. This road will realize the early dream of South Carolina, to unite herself with Louisville and Cincinnati, by a direct and expeditious route, as it was exhibited in the convention held twenty-five years ago; and in the labors of General Hayne, who, in this service, deserves as much as his dintinguished ancestor to be called the "martyr Hayne." By this route, Charleston will be distant 310 miles from Knoxville, an advantage over shipping point of Richmond of 84 miles, and over Savannah of 94 miles. The total distance to Lovisville will be 677 miles, by roads for the most part constructed, and to Cincinnati 683 miles, against 1,200 to 1,400 miles by existing routes. Knoxville is at the head of steamboat navigation, on the Holstein, and the trade of this and tributary rivers is concentrated at Chattanooga. At one time after the rise in the river, 200 boats were seen moored at Knoxville, on the way to Chattanooga, laden with salt and plaster from Virginia, and with every variety of Western produce. This trade will be intercepted by Charleston. Knoxville, too, will become the entrepot of Cincinnati and Louisville.

"By the completion of the Tennessee and Virginia Railroad, during the past year, Richmond now draws off all the trade of East Tennessee, north of Knoxville, and will draw the trade south of that city, even, to some extent, as far south as Chattanooga. Charleston has no connection with Knoxville, except by a circuitous route over the rival roads of Georgia, one hundred and ten miles further than by the Blue Ridge Railroad. With this disadvantage of distance, Charleston cannot

compete with Richmond for the trade of East Tennessee. Indeed, it will be seen, by an inspection of the map, that without the Blue Ridge Road, Charleston and South Carolina have little opportunity of sharing in the advantages of a commercial connection with the navigable waters of the West. The Georgia Railroads belt the State on the southwest; the Virginia roads on the northeast; and North Carolina, which has finished the State Road to Salisbury, is pushing it onward to Murphy, at the foot of the Blue Ridge. Its next step will be over the mountains to the valley of the French Broad, and then the cordon of railroads around South Carolina will be complete and close."—*De Bow's Review.*

Railroad Earnings.

The earnings by the Chicago, Burlington and Quincy Railroad Line, in the month of September, were in—

	26 working days, 1859.	25 working days, 1860.
Freight	$117,749 45	$171,535 00
Passengers	46 090 16	51,077 80
Mails & miscellaneous	5,024 58	3,283 29
Passengers for U. S. Fair	12,196 95	
Total	$181,061 44	$225,896 09

Increase exclusive of earnings in 1859 for U. S. Fair $57,031 60.

The receipts of the Grand Trunk Railway of Canada for the week ending September 22, 1860, was $79,094 17
Corresponding week last year 51,585 50
Increase $27,508 67
Total traffic from July 1, 1860, to date $721,662 59
Corresponding period, 1859 524,236 24
Increase $197,426 35

The earnings of the Toledo and Wabash Road for September, 1860, were as follows:

Passengers $24,539 62
Freight 78,115 08
Mail and express 3,445 62
Total $106,100 32
September, 1859 74,889 09
Increase $31,411 23

The earnings of the Macon and Western Railroad for September, 1860, were:

Passengers $11,820 15
Freight 19,300 42
Mail 838 50
Total $31,959 07
September, 1859 37,523 05
Decrease $5,563 98

The earnings the New York Central Railroad for September, 1860, were $851,795 92
September, 1859 743,598 98
Increase $108,196 64

The earnings of the Michigan Central Railroad for September, 1860, were $251,248
September, 1859 210,837
Increase $40,586

The earnings of the Cleveland and Mahoning Railroad Company for September, 1860:

Passengers $7,697 54
Freight 14.187 94
Coal 18,074 72
Mail 418 75
Gross $40,378 95
Expenses 12,224 56
Net $28,154 39

The net receipts of the Harlem Railroad for the month of September are as follows:

1859 $97,218 62
1860 105,473 33
Net increase $8,254 71

The net receipts for the same month for the last three years were as follows:

1858 $84,883 21
1859 97,218 62
1860 105,473 83

The following table shows the monthly earnings of the Hudson River Railroad for the years 1858-9 and 1859-60, both years ending on 1st October:

	1858-'9.	1859-'60.
October	$140,782 87	$170,157 48
November	137,094 50	157,443 09
December	197,980 14	232,032 64
January	192,161 14	211,713 68
February	190,588 94	209,422 63
March	175,773 23	161,047 88
April	121,123 24	134,005 77
May	141,268 92	156,081 09
June	115,444 23	120,996 34
July	125,304 57	140,865 92
August	155,163 78	167,219 75
September	156,972 88	180,000 14
Total	$1,849,658 44	$2,050,786 41

The receipts of the Grand Trunk Railway of Canada, for the week ending September 29, 1860, were $80,963 08
Corresponding week, 1859 70,903 84
Increase $10,059 24
Total traffic from July 1, 1860 $802,625 67
Do. for same period last y 595,140 08
Increase $207,485 59

The receipts of the Great Western Railway of Canada, for the month of September, 1859 and 1860, are as follows:

	1859.	1858.
Passengers	$107,134 97	$140,598 85
Freight	61,864 79	108,384 83
Mails and sundries	6,087 80	5,445 72
Total	$175,187 56	$254,429 40

Increase in September, 1860 $79,241 84

The receipts of the Detroit and Milwaukee Railroad for September, 1859 and 1860, are as follows:

Gross Earnings, 1860 $85,707 64
Do. 1859 62,385 08
Increase $23,322 56

The following is an approximate statement of the earnings of the Pittsburg, Fort Wayne and Chicago Railroad Company for the month of September, 1860, compared with the same period of last year, viz:

	1860.	1859.
From Freight	$142,039 42	$129,329 57
" Passengers	87,010 26	86,729 03
" Express	2,500 00	3,250 00
" Mails	7,825 00	7,825 00
" Rent of road	7,083 33	5,500 00
" Rents and Miscel.	250 00	678 99
Totals	$246,708 01	$233,312 59
Increase		$13,395 42
Total from Jan. 1st, to Sept. 30, 1860	$1,627,259 95	$1,393,698 08
Increase		$233,560 97

The earnings of this road for September, exceed those of any one month since its completion, and the aggregate increase to Sept. 30, over those of last year, betokens a very satisfactory sum for the fiscal year to end December 31, prox.

Earnings of the New York and New Haven Railway Company for September, 1860:

Passengers $77.051 83
Freight 15,000 00
Total $92,051 83
For September, 1859 90,554 03
Increase $1,497 80

Railroads in France.

There are, at the present time, 6,760 miles of railroad in operation in the French Empire, and 3,460 more in process of construction. The total sum expended or to be expended in their construction is $1,156,000,000, of which $718,000,000 had been expended up to the 31st December 1859. The French railroads have therefore cost on the average $106,213 per mile.

Cincinnati and Chicago Railroad.

We learn that all but eighteen miles of this road, between Logansport and Valparaiso, has been covered with iron, and that the bridge over the river at Logansport was finished last week. It is of the McCallum patent, and said to be one of the most substantial structures of the kind in the West. It is expected that the remainder of the track will be laid by the first of December, and every thing in condition to have a grand opening by the holidays.

Cleveland and Pittsburg Railroad.

Among the cheerful signs of the times none will afford our citizens more satisfaction than the figures we are enabled to show relative to the present year's receipts of the Cleveland and Pittsburg Railroad Company. These figures are not officially certified, but *we know* that they are correct.

The gross receipts for the first ten months in 1858, were $613,000 00
For same time in 1859 736,000 00
" " " 1860 832,000 00
The gross receipts for the whole year of 1858 770,000 00
For the year 1859 906,000 00
" " 1860 (2 m'ths estimated) 1,025,000 00
During the year 1858 the indebtedness of the company was reduced. 166,000 00
During 1859 158,000 00
" 1860 241,000 00

This result is the effect of a close economy in the management of the road. Every dollar has been made to tell, but not a dollar withheld that was necessary for efficient, safe and generous working of the road. A man need not be very far-seeing to fortell the future of this road with such data as facts like the above afford. It must be a source of great gratification to Mr. J. N. McCullough, the President of the road, and to the Board of Directors, under whom such results have been brought about, to be able to show the creditors and stockholders of the road figures like the above.—*Cleveland Herald.*

American Railroad Journal.

Saturday, October 13, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

The Break-down in the Stock Market.--Chicago and Rock Island Railroad.

The cause chiefly prominent in the recent collapse in the stock market was doubtless the action of the Chicago and Rock Island Company in reference to the anticipated October dividend. One was paid for the first half of the year, before business had revived, and upon the low scale of earnings for the past two or three years. Dividends had been omitted for several years, and the net earnings had, in common parlance, been applied to place the road and equipment "in first rate order." On the return of dividends, the public mind was fully made up to their regular continuance. Upon such an expectation was based the great advance in the price of the company's shares. Something much better than 7 per cent. per annum was expected—8 and 10 per cent. were claimed—while to the visions of the more extravagant the extras of old times were conjured up. For expectations so well founded to turn out an entire *blank*, without a word of explanation from the company, was enough to shake all confidence in railway matters. The logic in favor of a dividend had been incontrovertible. To get none was at once to raise these doubts in reference to the value of railway property, which carried prices to a ruinous pitch and held them there for several years. The effect was an immediate collapse in the stock market, which has continued to the present time.

But should this case stand for a class? Not, unless all our railroad managers are *rogues* who use the works which they have in charge for their own selfish purposes. This we are by no means willing to admit, however true it may be in the

case of the Rock Island Company. The public have not yet been able to clear out the concern that have always managed this road. The set that have preyed upon it from the beginning still hold on. The road was originally built by contract for the sum of $3,987,688. Its present cost is swelled to $7,000,,000 in addition to the Bureau Valley Branch. The road was a most miserably constructed affair—accepted by the company, which was controlled by the contractors, when half completed. Hence the explanation of the excessive amounts since expended upon it. But this is not all. The contractors in the Rock Island, who were also its controlling directors, undertook the construction of the *Bureau Valley Railroad*. This work began to drag, when the lucky idea suggested itself of making the Rock Island Company foot the bills. The contractors in this having the full swing in the Rock Island, procured a perpetual lease of it to be taken by the latter at the rate of $125,000 per annum, for 47 miles of unfinished road, which we presume has not yet netted the company *a dollar*. Leading directors in the company have been frequently importuned to tell the public something about the cost and revenues of this Branch, but their reports never deign an allusion to it. At the time of the lease no statement was made up of the amount of work necessary to be done to complete the road, and several of the directors, not interested in the contract for its construction, voted against the lease on this account. We presume there is not a soul interested in the Rock Island Company, outside of the few directors, who were privy to the transaction, who can to-day tell what the Bureau Valley Railroad has cost. It cost the company, capitalizing the rental paid at 7 per cent., about $1,800,000 or $40,000 per mile—a pretty good price for an unfinished road, without equipment. The Rock Island was contracted to be built and *equipped* for just about one-half this amount, or $21,000 per mile.

This incubus of the Bureau Valley lease still remains. Last year it eat up one-third the whole net earnings of the Rock Island Company. It is equal to a dividend of about 2 per cent. on its stock, which is the penalty annually paid by the stockholders in the Rock Island Road for the rascality of its managers.

But their schemes and operations did not stop here. The great stock operaters in the road are its managers. They are in the position to blow it up or down just to suit their plans. It is by no means improbable that the dividend paid last spring was not earned, but was declared merely as a stock jobbing affair. The Directors in this way having placed the mselves in a position *to sell out*, the object, as far as they were concerned, was accomplished. That one could have been earned in the winter months, when little is doing on any road and the great expenses of the year are incurred, and not in the succeeding business months with a vast increase of traffic is preposterous. We have no doubt the payment of the April dividend was a mere trick of stock-jobbing. The omission of the expected one in October, may have proceeded from the same motive.

Taking the history of this company we protest against its standing as a representative of others. No greater breach of trust can be committed than has been by the leading directors in this company. Judged by their conduct they are a set of rogues from beginning to end. Whether the stockholders can rid themselves of these fellows remains to be seen. But one thing is certain they ought to stand alone in their disgrace.

Buffalo, New York and Erie Railroad.

The first mortgage bonds of this Company have been called regularly in the dealings of the New York Stock Exchange since Monday the 7th inst. The amount is $2,000,000, bearing 7 per cent. interest, payable semi-annually in June and December and having yet 16 years to run. This issue is chiefly in the possession of the original purchasers. It is claimed by the managers of the company that these bonds are entitled to rank with corresponding issues of the Erie, Hudson River and Harlem, as the interest has always been paid and the business of the road warrants confidence in the future ability of the company to meet its liabilities. The road forms the Buffalo and Rochester Branch of the New York and Erie and connects southward with the lines of Pennsylvania and Maryland, forming with these the most direct route between Philadelphia and Baltimore, and the principal cities of Lakes Ontario and Erie. Its length from Corning to Buffalo is 142 miles which have cost the present company, which is successor to the late Buffalo and Corning, $3,150,762. The net earnings of the road in 1858-59 amounted to $172,311. The gross earnings during the current year have been so far about 20 per cent. over those of the previous year, and for the months of May, June, July, August and September the aggregate increase has been $47,599,—from $214,769 in 1859 to $262,368 in 1860.

With these figures before us we are bound to acquiesce in the claims of the Directors, and have little hesitation in the face of such a substantial increase in profits to predict a future for this line, to which its eligible location and business connections eminently entitle it. The following from "Poon's *History of the Railroads of the United States*," (the first volume of which will be ready for publication next week) gives a concise history of the Company:—

The Buffalo, New York and Erie Railroad Company was organized under the general law, and filed articles of association on the 24th October, 1858. On the 29th of the same month the Company purchased the Buffalo, Corning and New York Railroad, on the foreclosure of its first mortgage, dated 1st April, 1852, to secure bonds to the amount of $998,000, and also the rights acquired under the sale of the Buffalo and New York City Railroad between Buffalo and Attica, a distance of 31½ miles, and claims, under the proceedings described, to have become the owner of that part of the last named road. To connect this with the line of the Buffalo, Corning, and New York Railroad, a road was constructed from Attica to Batavia, about 11 miles, and opened on the 20th June, 1858. To provide the means for the several purchases, and to construct the new road, the Buffalo, New York and Erie Company issued two mortgages, the first to secure bonds to the amount of $2,000,000, and the second for $380,000. Upon the payment of the 1st Mortgage ($500,000) on that portion of the Buffalo and New York City Railroad between Buffalo and Attica, these mortgages will constitute the only lien upon the Road. On the bonds last-named $370,000 have already been exchanged for the first mortgage bonds of the new company. Since the 1st. November, 1858, this company has operated the Buffalo and New York City Railroad from Attica to Hornellsville, and the Rochester and Genesee Valley Railroad from Rochester to Avon, and since its completion the Genesee Valley (now Avon, Geneseo and Mount Morris) Railroad from Avon to Mount Morris.

James River (Va) Coal Trade.

The coal fields of Eastern Virginia occupy the area about the lower James and Appomattox rivers. The mines of this district were perhaps the first worked within the United States. The coal is brought to market over three principal avenues, namely, the James River Canal, the Clover Hill Railroad and the Richmond and Danville Railroad. Before the construction of the latter the Chesterfield Railroad was in use but was subsequently abandoned. Several short railroads are tributary to the canal, but as their tonnage is included in the returns of that work, these need not be further noticed. The coal trade was commenced in 1822, and for several years was carried on by barges on the James river. The Chesterfield Railroad was built in 1831-2. The James River Canal trade commenced in 1844. The Clover Hill Railroad was opened in 1846. The Springfield mines are reached by a short railroad diverging from Hungary, a point on the Richmond, Fredericksburg and Potomac Railroad. Of these which, belong to the New York and Richmond Company, we have no statistics. The quantity of coal brought to market by the principal avenues, exclusive of that brought from the Springfield mines, has been since 1840 as follows:

—making an aggregate tonnage from the sources indicated in the 20 years ending with 1859 of 2,371,084 tons, or on the average 118,559 tons yearly.

Concord and Portsmouth Railroad.

The income for the year ending 31st August, 1860, has been as follows:—

Rent from lessees		$15,500
Sundries, including balance $280 from previous year		499
		$15,999
And the disbursements for the same year.		2,141
Net earnings		$13,858
From this have been paid two dividends:		
Dividend No. 2, in April, 1860, on 22,950 shares	$6,884	
Dividend No. 3, in September, 1860, on 23,000 shares	6,900	
		13,784
Leaving a surplus of		$74

The corporation is successor to the Portsmouth and Concord Railroad Company. It has no debt or liability of any kind except to the stockholders, and is operated under lease by the Concord Railroad Company, which pays as rent therefor $15,500 a year.

Alabama and Florida Railroad.

Mr. C. T. POLLARD, the President of this road, in his annual report to the stockholders, positively announces the completion of the connection between Montgomery and Pensacola by 1st April 1861. Only five miles of the road-bed are in an unfinished condition. The President also announces that he has closed an arrangement for the connection of the road with the Mobile and Great Northern Railroad, within five miles of the Florida line, upon terms entirely satisfactory. The Pensacola *Observer* of 20th ult. says: "We learn that the Alabama end of our road is progressing rapidly under the efficient management of the contractors. Seven miles are now completed and in running order, and we understand sufficient force will be employed to place in running trim three and a-half or four miles per month, which will close up the gap in double quick time."

Proposed Grant to a Florida Railroad.

The Commissioner of the General Land Office has submitted to the Secretary of the Interior for approval, an abstract or list embracing over 420,000 acres of land, to aid in the construction of a railroad from Jacksonville, Fla., to the waters of the Esculia, according to the Act of Congress of 1856, under the grant to the State of Flordia. The lands included in this list are sections and part sections within the six mile limits of the road.

Pennsylvania Railroad,

The Supreme Court of Pennsylvania now in session at Sunbury, delivered an opinion affirming the decision of Judge Pearson in the suit against the Pennsylvania Railroad Company for the tonnage tax overdue. Judge Pearson decided the tax to be constitutional, and the Supreme Court, in affirming the decision, have thus decided that point against the Railroad Company. A considerable amount of money, withheld by the company until this question should be decided, is now due the State, and will, doubtless be paid without delay.

Tolls on the Canals of Ohio.

The following statement shows the amount paid into the State Treasury for tolls, water rents, &c., on the Ohio Canals during the month of September, 1859 and 1860, viz:

	1859.	1860.
Ohio Canal	$5,099 00	$2.473 22
Miami and Erie Canal	8,701 62	17,829 62
Hocking Canal	602 81	1,836 93
Muskingum Improvement	429 55	1,836 82
Walhonding Canal		120 80
West. Res. & Maumee Road.		733 11
	$15,833 07	$34,830 50
		15,833 07
Increase		$18,997 43
The total amount paid into the State Treasury for Canal Tolls, &c., since the 15th of November, 1859, to the 1st of October, 1860, was		$230,527 29
Same period last year		194,949 45
Increase		$35,577 84

Alabama Central Railroad.

The connection between North and South Alabama by railroad is nearly consummated. The Athens *Herald* of the 14th ult. says:

At a meeting of the Mountain Contracting Company in this place on the 4th inst., the books of the Company exhibited the gratifying information that all the stock necessary for the completion of the whole line of road had been subscribed, with the exception of $25,000, which will have to be subscribed in Limestone county.

The *Herald* adds: "The construction of the Central road is placed beyond a reasonable doubt."

Sleeping Cars.

The Mobile and Ohio Railroad Company are desirous of obtaining first class sleeping cars for through trains on their road, proposals for the construction or furnishing of which will be received by L. J. FLEMING Esq., Chief Engineer and Superintendent at his office, Mobile, Ala., until the 20th inst. For particulars, see Advertisement in another column.

Bridge Across the Ohio at Louisville.

The Louisville *Journal* learns that the Nashville road, as soon as the Memphis branch is completed, together with the Jeffersonville road, will be willing to guarantee six per cent. interest on the cost of an iron bridge over the Falls—say $1,000,000. Reliable parties who hold a large amount of the mortgage bonds of the Jeffersonville road, visited Louisville this spring with the view of ascertaining the cost of the bridge and expressed a perfect willingness to furnish the means for the construction of the bridge as soon as the guarantee of the roads entering there could be had.

Cairo and Memphis Railroad.

We were called upon recently by Mr. E. A. Crandall, the agent of the Mississippi Railway, a newly-projected thoroughfare extending from Cairo to Memphis. He reports the prospects for carrying this work through as indeed encouraging. With a party of engineers, which is now engaged in Kentucky opposite Cairo, he has, since June last, traversed the whole route between the two points, feeling the pulse of the people touching this matter, and he assures us that the proper spirit is abroad, and that the road *will be built!* Memphis is alive to the importance of the enterprise, and will, it is believed, furnish fully one-third the means required to prepare the road-bed for the superstructure. The counties of Dyer and Lauderdale are equally enthusiastic, and will lend a liberal aid. About five hundred thousand dollars have already been subscribed as individual subscriptions. This can easily be increased to one million by corporate subscriptions, to say nothing of State aid that might be obtained from Tennessee; and this sum will be about two-thirds of the amount required to place the road in a condition to enable the Company to secure the iron.—*Cairo Gazette.*

Catawissa Railroad.

The Receiver of this Company has been discharged by a decree of the Supreme Court, and the new company will be organized with $2,200,000 of preferred and $1,150,000 of common stock. The preferred stock will be issued at par to the holders of first mortgage bonds, and the unpaid coupons of same, and to the claimants of confidential debts. The preferred stock will be entitled to all the net profits of the road until they reach 7 per cent., after which they are to be divided among the holders of the common stock until they reach 7 per cent., the profits over and above this are to be divided pro rata to both kinds of stock. The common stock is to be given to the holders of the second mortage bonds and to the claimants of unsecured indebtedness at par, and to present stockholders in the ratio of one share to every four now held.—*Philadelphia Bulletin.*

Bay de Noquette and Marquette Railroad.

This work is rapidly progressing.—The engineering corps, L. K. Dorrance, Chief Engineer, having already penetrated nearly two miles beyond the Burt Mountain. They are now engaged in cutting and clearing away the trees and brush, preparatory to commencing the work of excavation and embankment. It is the company's intention to have this three mile extension completed early next spring. In addition to this, the company is making many improvements on the balance of the road now in operation.—*Marquette Journal.*

Detroit and Milwaukee Railway.

The Detroit and Milwaukee Railway was sold on the 4th inst. by arrangement under a decree from the United States Court for the benefit of the bondholders. It was bid in by Wm. Gray, counsel for the road, at a nominal price of $1,000,000. The adjustment of the affairs of the corporation was alluded to at large in our columns a short time since, and the sale is a part of that arrangement, which is entirely amicable and satisfactory. The road will operate as usual under the new arrangement, and is in a fair way to place itself on an independent financial footing, through the medium of the reliable and energetic management now in charge.—*Detroit Free Press.*

Memphis and Vicksburg Railroad.

Much encouragement is manifested by those interested in the final construction of the projected railroad from Memphis to Vicksburg. The length of this road will be about two hundred miles, and its estimated cost about four millions of dollars, or twenty thousand dollars per mile. The citizens along the route are so fully sensible of the advantages to accure from the completion of the proposed enterprise, that they have all agreed, almost without a dissenting voice, that the lands along the line, six miles out from each side of the road extending from Vicksburg to the Tennessee line (190 miles), shall undergo a tax of one dollar and a half per acre. This will at once secure towards its consumation the sum of $2,188,800. The city of Vicksburg will subscribe the sum of $150,000, and it is reasonable to assume that the State of Tennessee will give $100,000 for the ten miles within her limits.

Memphis is expected to subscribe $450,000, which will be so much invested in valuable stock in the road, and it will meet with ready sale at any time after the project is fully complete, would only be tantamount to lending its credit for that amount, as in the case of the Memphis and Charleston road.—*Cincinnati Enquirer.*

Boonville and Tipton Railroad.

The work on this road was commenced on the 3d inst. The estimated cost of the road is $170,000.

ENGLISH WATCHES.

THE CELEBRATED

LONDON WATCHES.

I. & M. T. LEVITT,

CHRONOMETER MAKERS TO THE ROYAL NAVY.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.			SHEET No		
1.	General Table for all Bases and all Slopes.		13.	for Base 18 ft. Slop.	1½ to 1
			14.	" 20 "	1½ to 1
2.	For Side Hill Cuts and Fills.		15.	" 24 "	¼ to 1
3.	Base 12 ft. Slopes	1½ to 1	16.	" 24 "	1½ to 1
4.	" 14 "	1½ to 1	17.	" 25 "	1½ to 1
5.	" 15 "	¼ to 1	18.	" 26 "	1½ to 1
6.	" 15 "	1 to 1	19.	" 28 "	¼ to 1
7.	" 15 "	1½ to 1	20.	" 30 "	1 to 1
8.	" 16 "	¼ to 1	21.	" 30 "	1¼ to 1
9	" 16 "	1 to 1	22.	" 30 "	1½ to 1
10.	" 18 "	¼ to 1	23.	" 32 "	1 to 1
11.	" 18 "	½ to 1	24.	" 32 "	1¼ to 1
12.	" 18 "	1 to 1			

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c. each;** or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT
Centrifugal PUMPS

ARE the best and cheapest Pumps made for **RAILROAD STATIONS, MINES, FACTORIES, TANNERIES, PLANTATIONS, DRAINAGE, IRRIGATION, WRECKING,** and general use.

Made entirely of metal, without working valves or rubbing surfaces, they pass sand, fine ore and gravel, without injury. Capacity from 20 Galls. to 1,000 Bbls. per minute.

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine**, and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER
CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every departme t of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

New York, Saturday, October 20, 1860.

La Crosse and Milwaukee Railroad.

A committee of the holders of the La Crosse and Milwaukee Land Grant Bonds, composed of Messrs. Charles H. Roberts and others have made a report of which the following are the material points:

The undersigned Committee authorized their Chairman to proceed to Milwaukee in August last in behalf of the bondholders, who recognize an equality in the value of the bonds issued with the Land Grant $4,000,000 mortgage, and represent their interests in the United District Court then in session, and there to take such action as might be best calculated to advance the interests of the bondholders at the hearing in the suit for foreclosure and sale of the road.

On the 13th of August an application was made for a decree authorizing a sale of the western division or Land Grant portion (105 miles) of the road under the $4,000,000 Land Grant Mortgage, and at the same time for a sale of the eastern division (95 miles) under the second mortgage on that portion of the road. To these applications numerous objections were interposed, and certain bondholders, who claim that a distinction ought to be made between the bonds issued with the $4,000,000 land grant mortgage were permitted to come in as defendants with leave to put in an answer and take testimony in relation to their claim. This, with other causes, necessarily operated to postpone the final hearing on the merits in the foreclosure suit, and the same has been set down for argument at the term to be held in November next, when your Committee, in your behalf, propose to attend by counsel, whose special duty it will be to protect your interests. We are happy in being able, through the attention of our sub committee, who made a thorough examination not only as to the legal proceedings in progress, but also of the books and papers at the Receiver's office, of the works and property of the company, of the entire line of road and of the tributaries, which are deemed eminently valuable to the road itself, to communicate much that may be of interest to all the bondholders. The road and property are in the hands of a competent and faithful Receiver, who devotes his whole time to the duties of his office, and who, under the direction of the Court, appropriates the earnings of the road to their proper use, and so that whatever is expended will benefit the parties in interest. This fact saves us from the injury heretofore consequent upon the delay in our legal proceedings, when the earnings of the road were not applied to legitimate purposes, but retained to the injury of unpaid employees, many of whom, however, have received their back dues from the Receiver, under the authority of the Court. These and other legal claims against the company are in the course of adjustment and payment, and ere long the road will be freed, we trust, from numerous minor claims that have been a source of great embarrassment.

By the judicious action of the Receiver the road is gradually emerging from its embarrassments, and we have the satisfaction of believing that before long net earnings enough will have accrued to justify the expectation that some portion of the interest accrued upon the company's securities can be paid. By the books in the Receiver's office it appears that there remained in the hands of Selah Chamberland, Lessee of the road, of its net earnings from Oct. 1, 1857, to Dec. 1, 1859, while the same was in his possession, after deducting all the disbursements claimed by him, the sum of $262,189 86, and that such sum yet remains in his hands, subject to his claims against the company, which are large, but which it is believed are utterly unfounded as against the bondholders and other creditors of the company.

The road was in the possession of P. Dow, agent for the Trustees of the bondholders from Dec. 1, 1859, to June 9, 1860. On the 11th, it was delivered over to the Receiver. Of the net receipts from the road during this agent's administration, he has in hand the sum of $28,830 04. Your committee know of no reason why these moneys are not applicable to the wants of the company and the debts due the bondholders.

The work shops and engine house of the company are sufficient for present purposes. The deficiency heretofore existing in the rolling stock of the road has been in a great measure obviated by the purchase of three locomotives, and by the conversion of platform cars into freight cars, and by such additions, within the limits authorized by the Court, as have put the road in condition to better answer the requirements that will be made upon it by the unusually large crops of that region seeking a market, and which must be carried over the road. The receipts of the road are evidently on the increase. We have partial returns up to the 27th of September, and have good reason to believe that the Receiver's estimate of $125,000 for that month is not too large. The road itself, particularly the Land Grant division, was found to be in much better order than was expected. The road is well graded and ballasted and generally in excellent condition. More depot accommodations are needed at La Crosse for facilitating traffic with the upper Mississippi, and workshops on the western end of the road would greatly contribute to its economical management.

The value of the Land Grant portion of the road regarded as a connecting link between the eastern division and the Mississippi can hardly be overstated. As such link, it must be the channel through which the vast products of North Western Wisconsin and of Minnesota, whose agricultural wealth, brought over roads whose termini will centre near La Crescent, must ultimately find their outlet at La Crosse; and when either the two divisions under one management, shall pass into the hands of its real owners, or the Land Grant portion shall find an outlet by the way of Madison to Chicago, the Land Grant bondholders will find their securities of far more value than is now indicated by their market price. Their present depression may be attributed to the protracted litigation, to the singular claim of the eastern division to the ownership of the whole of the rolling stock, and to the pertinacity with which unfounded claims against the company are pressed—not so much, we think, in the hope of ultimate success in the Courts, as by delay, produced with a view to wearying the bondholders into a compromise, and to the most remarkable of all the demands made by those who are instrumental in protracting the contest, that of insisting that of the bonds issued with the $4,000,000 Land Grant mortgage, some are worth more than others. A careful examination of the intrinsic and prospective value of the road from Portage City to La Crosse, when taken in connection with the Land Grant attached, covering 307,200 acres of land, which, it is not doubted, may be secured for the benefit of the bondholders, renders it difficult to see any so powerful reason for the present unnatural depression of the bonds, as this claim of a distinction in the issues.

A large majority of the bonds held by those whom we represent are of the low numbers, but they seek no invalid or unfair distinction, and hence we are advised to press on with all reasonably dispatch to a settlement of all the questions in controversy.

Railroads of Virginia.

The following table exhibits the length of railroad in the commonwealth of Virginia at the end of the fiscal year 1859. It distinguishes the completed, progressing and total length and the main and branch lines.

Railroads.	Miles of road completed.	Miles of road in progress.	Total length projected.	2d track and sidings now in use.
Alexandria, Loudoun and Hampshire	22.60	18.91	160.00	0.61
Alexandria and Washington	6.00	.....	6.00	....
Blue Ridge	16.81	.....	16.81	0.20
Clover Hill	18.50	.....	18.50	3.00
Covington and Ohio	.....	31.00	224.00	....
Fredericksburg and Gordonsville	.....	45.00	45.00	....
Manassa Gap	77.77	61.53	139.30	3.25
Harper's Ferry Branch	.....	44.12	44.12	....
Front Royal Branch	1.00	.....	1.00	....
Gainesville Branch	7.96	.....	7.96	....
Norfolk and Petersburg	80.00	.....	80.00	4.81
Northwestern Virginia	103.50	.....	103.50	7.21
Orange and Alexandria	88.30	.....	88.30	4.00
Lynchburg Extension	.....	59.50	59.50	....
Warrenton Branch	8.90	.....	8.90	0.25
Petersburg	62.00	.....	62.00	5.00
Gaston Branch	18.00	.....	18.00	2.00
Richmond and Danville	140.50	.....	140.50	11.92
Midlothian Branch	1.14	.....	1.14	0.08
Manchester Branch	1.55	.....	1.55	
Richmond, Fredericksburg & Potomac	75.00	.....	75.00	4.50
Springfield Branch	3.50	.....	3.50	....
Richmond and Petersburg	22.14	.....	22.14	2.30
Port Walthal Branch	2.75	.....	2.75	0.80
Richmond and York River	23.66	14.64	38.30	0.23
Roanoke Valley	22.00	.....	22.00	....
Northern Extension	.....	31.00	31.00	....
Seaboard and Roanoke	80.00	.....	80.00	5.00
South Side	123.00	.....	123.00	3.00
City Point Branch	9.00	.....	9.00	0.50
Virginia Central	179.19	10.00	189.19	16.05
Virginia and Kentucky	.....	.....	130.00	....
Virginia and Tennessee	204.24	.....	204.24	9.26
Salt Works Branch	9.42	.....	9.42	0.60
Winchester and Potomac	32.00	.....	32.00	2.50
Total	1,440.43	315.70	2,197.62	87.07

To the sum of completed railroad ought to be added, though not considered as belonging to Virginia, the Baltimore and Ohio Railroad, 287 miles, the Hempfield Railroad, 10 miles, and the Pittsburg and Steubenville Railroad 7 miles. With these the completed railroad within Virginia (including short sections of the Seaboard and Roanoke, the Petersburg and the Roanoke Valley Railroads which extend into North Carolina) has a length of 1,744 miles. And there ought also to be added to this total the length of road completed since the end of last year, namely of the Alexandria, Loudoun and Hampshire 18.91, and the Lynchburg extension 59.50 or a total of 78.41 miles. Including these the present length of road open for business is 1,822¾ miles. The length of second track, sidings, etc., not included in the above estimate, amounts to 87 miles. The coal mining railroads extending from the mines to the James River Canal, of which there are several, do not properly belong to the class of roads noticed in the above table and are therefore excluded. They may probably have a total length of 10 or 12 miles. There is also a short coal railroad in Hampshire county.

The amount of rolling stock owned by the railroad companies in Virginia is shown in the table which follows:—

Companies.	Engines.	Pass'ger cars.	Freight cars.	Other cars.
Alexandria, Loudoun and Hampshire	2	1	..	..
Alexandria and Washington	..	12	..	..
Manassa Gap	9	5	177	44
Norfolk and Petersburg	5	2	61	14
Orange and Alexandria	12	10	107	6
Richmond, Fredericksburg and Potomac	11	10	160	14
Richmond and Petersburg	10	7	144	44
Richmond and Danville	22	11	382	37
Richmond and York River	2	1	23	..
Roanoke Valley	2	1	8	3
South Side	19	10	204	78
Virginia Central (including Blue Ridge)	27	13	187	40
Virginia and Tennessee	35	22	335	50
Winchester and Potomac	5	4	40	9
Total	161	109	1,828	389

—being a total of 161 locomotive engines and 2,276 cars of all descriptions. The Northwestern Virginia Railroad is operated by the Baltimore and Ohio Railroad Company which also furnishes the rolling stock.

The cost of the several railroads including the cost of equipment, on the 30th September, 1859, was as follows:—

Railroads.	Cost.	Railroads.	Cost.
Alexandria, Loudoun and Hampshire	$1,348,788	Richmond and Danville, with branches	3,659,668
Alexandria & Washington.	120,000	Richmond, Fredericksb'g and Potomac	$1,985,579
Blue Ridge	1,604,761	Richmond and Petersburg and Branch	1,222,523
Clover Hill	185,000	Richmond & York River.	725,394
Covington and Ohio	1,905,643	Roanoke Valley.	476,612
Fredericksb'rg & Gordonsville	221,572	Seaboard and Roanoke	1,469,246
Manassa Gap and Branch.	3,153,228	South Side and Branch	4,239 537
Norfolk and Petersburg	1,973,983	Virginia Central	5,362,910
Northwestern Virginia	5,683,753	Virginia and Kentucky	105,601
Orange & Alexandria and Branch	3,335,090	Virginia and Tennessee	6,854,975
Lynchburg Extension	2,919,925	Salt Works Branch	245,552
Petersburg	1,259,854	Winchester and Potomac.	575,830
		Total	$50,634,934

The capital invested in these several railroads has been raised in the following means—

	Share Capital.	Funded Debt.	Floating Debt.	Total Capital.
Alex., Loud. & Hamp.	$1,404,018	$	$129,020	$1,533,038
Alex. and Washington.	120,000			120,000
Blue Ridge	1,604,761			1,604,761
Covington and Ohio	1,905,643			1,905,643
Fredericksb.& Gordonsv.	219,665			219,665
Manassa Gap	2,969,861	775,500	118,789	3,864,150
Norfolk and Petersburg.	1,500,123	590,610	153,011	2,243,744
Northwestern Virginia.	485,963	3,909,300	1,294,223	5 689 486
Orange and Alexandria.	1,981,168	2,364,584	324,747	4,670,499
Petersburg	883,200	102,500	45 501	1,031,201
Richmond and Danville.	1,980,997	907,491	42,058	2,930,546
Rich. Fred. & Potomac.	1,041,880	648,960	96.828	1 782,668
Richm. and Petersburg.	836,100	204,808	26,853	1,067,761
Richm. and York River.	657,812	85,000		742.812
Roanoke Valley	425,523	55,700	14,500	495.723
Seaboard and Roanoke.	833,700	472,811	52.926	1,359,437
South Side	1,365,300	1,851,500	292.842	3,509,642
Virginia Central	3,132.445	1,247,000	43,605	4,423,050
Virginia and Kentucky.	105,601			105.601
Virginia and Tennessee.	3,450,869	2,936.530	671,218	7,058.617
Winchester and Potomac	300,000	203,333	24,736	528,069
Total	$27,204,629	$17,650,627	$3,330,857	$48,186,113

The State's interest in these companies amounts to $19,745,563, of which $14,603,419 is the amount paid for *ordinary* stock and for payments on account of works exclusively made on State account; $1,290,000 the amount paid for *preferred* stock; $3,212,908 payments on account of loans; $300,000 liabilities on account of guarantees, and $339,236 bonds issued to the State for dividends. The interest of the State in the several companies which have been aided by the public treasury is shown separately in the following table:—

Companies.	Ordinary Stock.	Preferred Stock.	State Loans.	Dividend Bonds.	Total Investm't.
Alex.,Loud. & Hamp.	$840,248	$	$	$	$840.248
Fred. & Gordonsville	131,799				131,799
Manassa Gap	1,632,000	250,000			1,882.000
Norfolk and Petersb.	899,970		300,000		1,199,970
Orange and Alex.	652.316	210,000	400,000	31,600	1,293,916
Rich.,Fred.& Potom.	275,200			130,720	405,920
Richm. & Petersb'rg	385,600			33,408	419,008
Richm. & Danville	1,188,599		600,000		1,988,599
Richm. & York Riv.	274,167	200,000			474.167
Roanoke Valley	177,402	130,000			307.402
South Side	803,500		800,000		1,603,500
Virginia Central	1,878,448			143,508	2,121,956
Virginia and Tenn.	1,770,425	500,000	1,029,575		3,300.000
Winchester and Pot.	120,000		88,333		208,333
Blue Ridge	1,604,761				1,604,761
Covington & Ohio	1,905,643				1,905,643
Virginia and K'y	63,341				63,341
Total	$14,603,419	$1,290,000	$3,212,908	$339,236	$19,745,563

In the aggregate total there are included the guarantees of the State to the amount of $300,000, namely for the Richmond and Danville Railroad $200,000, and for the Virginia Central Railroad $100,000.

The earnings of those roads which have been operated within the year ending 30th September, 1859, have been as follows—

Railroads.	Miles operated.	Gross Earnings.	Current Expenses.	Earnings over Expenses.	Dividends. Amount.	Dividends. Rate.
Manassa Gap	86.73	$136,998	$93,836	$43,062	mil.	mil.
Norfolk and Petersburg	80.00	54,132	31,405	22,727	mil.	mil.
Northwestern Virginia	108.50	240,171	198,270	41,901	mil.	mil.
Orange and Alexandria	97.20	288,708	131,572	157,226	mil.	mil.
Petersburg	80.00	329,035	132,164	196,871	$70,656	8
Richmond and Danville	143.19	554,203	261,215	292,988	mil.	mil.
Richmond, Fred. and Potomac	75.00	279,945	134,560	145,385	mil.	mil.
Richmond and Petersburg	24.91	157,542	75,056	82,486	48,805	6
Roanoke Valley	22.00	21,667	11,041	10,616	mil.	mil.
Seaboard and Roanoke	80.00	240,446	119,393	121,053	57,234	7
South Side	132.00	410,167	208,823	201,344	mil.	mil.
Virginia Central	195.00	652,605	269,708	382,797	139,975	4
Virginia and Tennessee	218.66	672,894	394,185	278,709	mil.	mil.
Winchester and Potomac	82.00	56,369	55,765	594	mil.	mil.
Total	1,265.19	$4,094,252	$2,116,443	$1,977,809	$354,612	....

From this table the following results are obtained:—

Gross earnings per mile of road operated	$3,236
Current expenses " " "	1,673
Net earnings " " "	1,563
Amount of share capital on which dividends were paid	$6,727,325

1. *Alexandria, Loudoun and Hampshire R. R.*

Chartered 15th March, 1853. Capital authorized $3,500,000 (subscribed $1,500,000 and paid in $1,404,018); funded debt, none; floating debt $129,020. The main line of this road will extend from Alexandria to Paddytown on the Upper Potomac. The maximum grade westward is 80 feet for 3.7 miles, and eastward 53 feet for 10.67 miles. The maximum radius is 22,920 feet and the min. radius 1,000 feet. The total cost of the road, equipment, etc., to the 30th Sept., 1859, was $1,348,788. At this date, 22 miles were laid with rail; it has since been completed to Leesburg and Clark's Gap 41.51 miles.

2. *Alexandria and Washington Railroad.*

Chartered 27th Febr'y, 1854. Extends from Alexandria to Washington 6 miles, and has now been in use about 4 years. Nothing relating to its financial condition could be ascertained.

3. *Blue Ridge Railroad.*

Chartered 5th May, 1849. Extends from Mechum's River to Waynesboro' 16.81 miles and includes one of the most extensive tunnels in the Union. It has been constructed entirely at the cost of the State and is operated as a part of the Virginia Central Railroad, that company paying certain tolls for its use. Cost of road and tunnel works $1,604,761. Max. grade westward 75 feet for 4.21 miles and eastward 72 feet for 1.5 mile. Max. radius 573 feet, and min. radius 546 feet for 0.14 mile. The tunnel was completed on the 13th April, 1858. The railroad had been completed in 1853, and in the meanwhile a temporary track was laid over the mountain at Rock Fish Gap with grades of 300 feet to the mile. This is now abandoned. The tolls earned during 1859 amounted to $36,891 or about 2¼ per cent. on its cost. Of this sum about one-half was expended in finishing the work under contract with the Board of Public Works.

4. *Clover Hill Railroad.*

Chartered 5th February, 1841. Extends from the Clover Hill coal mines to the Richmond and Petersburg Railroad, a distance of 18½ miles. It is used solely for the transportation of coal. The company has also a large area of mining land.

5. *Covington and Ohio Railroad.*

Chartered 15th February, 1853. This road is entirely under the control and management of the Board of Public Works. The length of the main line from Covington to the Ohio River is 224 miles. No part is finished: the work is in progress from Covington to White Sulphur, and to that point will be opened in July, 1862. Max. grade going west 60 feet and east 30 feet. Total length of tunnels, 21,388 feet—longest 5,280 feet and average length 1,645 feet. Estimated cost of single track, but with double track masonry, including superstructure, water stations, depots, etc., $11,612,636. Estimated cost of equipment, engine houses, etc for a business that would pay 6 per cent. on the cost of the road and the additional expense of making tunnels of double track width $1,344,000. Total estimated cost $12,956,636: amount expended to the 30th Sept., 1859, $1,905,643.

6. *Fredericksburg and Gordonsville Railroad.*

Chartered 1st March, 1853. No part of this road is in operation. It will extend between the two points a distance of 45 miles. The amount expended on construction is $221,572. Work has been suspended since 1857, but an effort is now being made to obtain capital for its further prosecution. Capital authorized $400,000 of which subscribed $234,700 and paid in $219,665.

7. *Manassa Gap Railroad.*

Chartered 9th March, 1850. Will extend from Alexandria to Harrisonburg 139.30 miles, with branches to the Orange and Alexandria Railroad from Gainesville 7.96 miles, from Front Royal to the Shenandoah River 1 mile, and to Harper's Ferry 44.12 miles. The main line from Gainesville to Jackson's River 77.77 miles, is in operation, and also the Gainesville Branch which at present is used as a part of the main line, making the whole length in use from the junction with the Orange and Alexandria Railroad 85.73 miles, or including the Front Royal Branch (completed) 86.73 miles. The eastern extension from Gainesville to Alexandria remains incomplete and has so far cost $520,000: on the branch to Harper's Ferry $373,000 have been expended. The max. grade westward is 84 feet for 2.9 miles and eastward 70 feet. Max. radius on the main line 34,380 feet and min. (otherwise than at a depot) 1,045 feet. Capital authorized by charter and subsequent acts $3,450,000 (subscribed $3,100,000 and paid in $2,969,861); funded debt $775,500; floating debt $118,789. Cost of road, equipment etc. $3,158,228 The company uses the Orange and Alexandria Railroad from the junction to Alexandria 27 miles, and pays therefor 62 per cent. of the charges for freight carried over it. The earnings for 1859 were—from passengers $27,592, from freight $105,331, from mails $3,476. Total earnings for 1855 $102,675, for 1856 $127,914, for 1857 $131,836, for 1858 $125 599 and for 1859 $136,398.

8. *Norfolk and Petersburg Railroad.*

Chartered 17 March, 1851. Extends from Norfolk to Petersburg 80 miles. Maximum grade either way 37 feet to the mile, and straight line for 74 miles. Maximum radius on the curved part 34,380 feet, and minimum radius 3,274. Capital authorized $1,500,000 (all paid in); funded debt $590,610; floating debt $153,011. Cost of road, equipment, etc., $1,973,982 which includes discounts, interest, etc., to the amount of $155,047. Earnings for the year, from passengers $25,838, from freight $15,180, from mails $6,112, and from other sources $7,001.

9. *Northwestern Virginia Railroad.*

Chartered 14th February, 1851. Extends from Grafton on the Baltimore and Ohio Railroad to Parkersburg on the Ohio River, a distance of 103.5 miles. Maximum grade westward 58.8 feet and eastward 52.8 feet to the mile. Maximum radius 17,761 and minimum radius 1,000 feet for 17¼ miles. The line has 22 tunnels of an aggregate length of 17,501½ feet; largest 2,700 feet and shortest 761 feet. The road is operated by the Baltimore and Ohio Company and may be considered as the southern arm of that line. Capital authorized $1,500,000 (subscribed $520,580, and paid in $483,963); funded debt $3,909,300; floating debt $1,294,221. The earnings are scarcely sufficient to pay working expenses.

10. *Orange and Alexandria Railroad.*

Chartered 27th March, 1848. Capital authorized $2,957,500, viz: for main line $1,457,500, and for Lynchburg extension $1,500,000, (subscribed $2,025,227, and paid in $1,981,165); funded debt $2,364,584; floating debt $324,747. Total cost of road, equipment, etc., $6,255,015. The length of this line from Alexandria to Gordonsville 88.30 miles and a branch to Warrenton 8.9 miles were completed and in use during the year. The line from Charlottesville to Lynchburg 59½ miles was completed in the summer of 1860. Between Gordonsville and Charlottesville 22 miles, the company use the Virginia Central Railroad, paying therefor 68 per cent. of the gross earnings. The entire distance from Alexandria to Lynchburg by this route is about 170 miles. The maximum grade is 66 feet and the minimum radius 1,000 feet. These are the extremes on both the main line and extension. The first 27 miles from Alexandria are used in common with the Manassa Gap Company which pays therefor 62 per cent. of the gross earnings. Earnings in 1859 from passengers $162,197, from freight $112,875, from mails, etc., $13,746. Total earnings for 1855 $211,505, for 1856 $276,639, for 1857 $273,244, for 1858 $258,996, and for 1859 $288,797.

11. *Petersburg Railroad.*

Chartered 10th February, 1830. The road extends from Petersburg to Weldon 62 miles with a branch to Gaston 18 miles. This branch was built under a separate charter by the name of the Greenesville and Roanoke Railroad and purchased

by this company in 1854. The alignment is very direct and no grade exceeds 80 feet to the mile. Capital $883,200; funded debt $102.500; floating debt $45,591. Cost of road, equipment, etc., $1,-031.201. Earnings in 1859 from passengers $129,-6 7. from freight $175,169, and from mails, etc., $24,259. Total earnings in 1855 $263,874, in 1856 $301,298, in 1857 $289,317, in 1858 $910,988, and in 1859 $329,135. The first dividend was paid on the 1st November 1835 and including this thirty-nine in all have been paid, amounting in the aggregate to $945,938.

12. *Richmond and Danville Railroad.*

Chartered 9th March, 1847. Length of main line from Richmond to Danville 142.50 miles, and of branches 2.69 miles. Maximum grade west 52.8 and east 60 feet to the mile. Capital authorized $2,000,000 of which $1,980,997 is paid in. Funded debt $907,491, and floating debt $42,058. Cost of road, equipment, etc., $3,659,668. Earnings for 1859 from passengers $181,799, from freight $352,881, from mails $19,523. Total earnings for 1855 $327,445, for 1856 $435,968, for 1857 $461,918, for 1858 $491,674, and for 1859 $554,203. It is proposed to extend this road west and connect with the East Tennessee and Virginia Railroad.

13. *Richmond, Fredericksburg and Potomac R. R.*

Chartered 25th February, 1834. Extends from Richmond to the mouth of Acquia Creek of the Potomac 75 miles. Capital authorized $2,000,000 (paid in $1,041,800 of which $43,700 is guaranteed to pay 7 per cent). Funded debt $643,960; Floating debt $96,829. Cost of road, equipment, etc., $1,985,519. Gross earnings in 1859 from passengers $208,287, from freight $44,633, from mails $27,025. Total earnings in 1855 $233,769, in 1856 $211,929, in 1857 $287,372, in 1858 $284,-966, and in 1859 $279,945. The amount now at credit to profit and loss is $490,279, chiefly applied to construction. The Springfield Branch (belonging to the New York and Richmond Coal Company) connects with this road at Hungary and is operated by this company.

14. *Richmond and Petersburg Railroad.*

Chartered 14th March, 1836. Length from Richmond to Petersburg 22.15 miles. Branch to Port Walthall 2.76 miles. The Clover Hill Railroad extending from Chester 13 miles south of Richmond to the Clover Hill terminus 18½ miles, is operated in connection with this road. Maximum grade going south 36.7 feet and north 34.24 feet. Maximum radius 10.460 and minum radius 1,910 feet. Capital authorized $1,775,000 (paid in $835,750); funded debt $204,808; floating debt $26,854. Total cost of road, equipment, etc., $1,222,523. Gross earnings in 1859 from passengers $86,650, from freight $73,755, from mails $7,-850, and from other sources $6,008. Total earnings in 1855 $138,696, in 1856 $154,947, in 1857 $163,265, in 1858 $150,417, and in 1859 $175,750 The sum of $160,087 has been carried from the dividend account to profit and loss.

15. *Richmond and York River Railroad.*

Chartered 31st January, 1853. Extends from Richmond to West Point (the junction of the Pamunky with York River) 38.3 miles. Length completed 23.66 miles. The maximum grade is 28 feet per mile and the minimum radius 955 feet. Authorized capital $700,000 of which $200,000 is preferred stock subscribed by the State. Capital paid in $657,812. Funded debt $85,000. Total cost of road, etc., to date $725,394. $200,000 additional is reqnired to complete it.

16. *Roanoke Valley Railroad.*

Chartered 4th March, 1851. Extends from Manson N. C., on the Gaston and Raleigh Railroad to Clarkesville, Va., 22 miles. Capital authorized $430,000 of which $130,000 is preferred and taken by the State. Total capital paid in $425,525; funded debt $55,700; floating debt $14,500. Total cost of road and equipment $476,612. The share capital has been increased for the purpose of extending the road northwardly 31 miles to Keysville station on the Richmond and Danville Railroad 73 miles southwest from Richmond—all of which is now under contract. Gross earnings from passengers $5,038, from freight $15,439, and from mails $1,179. Total earnings in 1856 $6,905, in 1857 $17,251, in 1858 $18,743, and in 1859 $26,503.

17. *Seaboard and Roanoke Railroad.*

Chartered 27th March, 1846. This was originally chartered under the name of the Portsmouth and Roanoke Railroad, which was purchased and reconstructed by its present owners. It extends from Portsmouth to Weldon 80 miles, with a maximum grade of 30 feet. Capital—common stock $608,700 and preferred 7 per cent stock $225,000; funded debt $478,061; floating debt $19,725. Total cost of road, etc., to date $1,463,995. Gross earnings 1859 from passengers $92,772, from freight $129,764, and from mails, etc., $17,910. Total earnings in 1856 $203,666, in 1857 $212,701, in 1858 $230,474, and in 1859 $240,446. The dividend on the preferred stock has been regularly paid, and 7 per cent. was paid last year in the ordinary stock.

18. *South Side Railroad.*

Chartered 5th March, 1846. The main line extends from Petersburg to Lynchburg 123 miles, and a branch from Petersburg to City Point 9 miles. The latter is the old City Point or Appomattox Railroad, which was purchased by this company in 1855, for $175,000, and is virtually a continuation of the main line to tide-water. Maximum grade westward 31.68 feet and eastward 47.52 feet. Whole descent and ascent 2,748 feet. Capital authorized $1,400,000 (paid in $1,365,300); funded debt $1,851,500; floating debt $292,842. Gross earnings in 1859 from passengers $179,017, from freight $212,150, from mails $2,000. Total earnings in 1855 $151,837, in 1856 $184,132, in 1857 $355,270, in 1858 $375,296, and in 1859 $410,166. It is crossed by the Richmond and Danville Railroad 71 miles east of Lynchburg, and connects at Lynchburg with the Virginia and Tennessee Railroad forming part of the line from tide-water to Memphis etc.

19. *Virginia Central Railroad.*

Chartered (under the title of Louisa Railroad) 18 February, 1836. This road now finished 195 miles, (including the Blue Ridge Railroad) from Richmond will be extended by July, 1862, to Covington a total distance of 206 miles. The actual length of the road belonging to this company and in operation is 178.19 miles. Maximum grade west 83 feet for 1¼ mile, and east 72 feet. Maximum radius 19.100 feet, minimum radius 716 feet. The company have on the main line west of Staunton a short temporary track for 1½ miles, the grades in which are as high as 308 feet to the mile, and curves of 400 feet radius. Capital authorized $3,400,000 (paid in $3,132,445); funded debt $1,247,500; floating debt $43,606. Total cost of road, etc., $5,364,260. Gross earnings from passengers in 1859 $306,312, from freight $319,-021, from mails $21,638, and from other sources $6,096. Total earnings in 1855 $379,366, in 1853 $508,413, in 1857 $540,841, in 1858 $587,038, and in 1859 $652,405. The net earnings in 1859 amounted to $382,797 which is equivalent to 7 per cent. on the cost of the road.

20. *Virginia and Tennessee Railroad.*

Chartered 24th March, 1848. This road is a continuation of the South Side Railroad from Lynchburg to Bristol on the Tennessee line where it connects with the East Tennessee and Virginia Railroad. The length of the main line is 204.24 miles and of the Salt Works Branch 9.42 miles. Maximum grade west 68 feet for 48 66 miles, and east 60 feet for 46.49 miles. Maximum radius 5,730 and minimum radius 716 feet. Capital authorized $5,000,000 (subscribed $3,503,200, and paid in $3,450,869), of which the State holds $2,298,-900 ($555,000 preferred). Funded debt $2,690,-030; floating debt $671,218. Cost of road, etc., $7,100,527. Gross earnings in 1859 from passengers $297,260, from freight $323,966, from mails $10,-999, from other sources $10,669. Total earnings in 1855 $255,920, in 1856 $322,049, in 1857 $299,-478, in 1858 $168,184, and in 1859 $672,894. The net earnings in 1859 were $278,759 or about 4 per cent. on the total investment.

21. *Virginia and Kentucky Railroad.*

Chartered 3d March, 1853. The location of this line is not yet completed. It is to commence at a point on the Virginia and Tennessee Railroad not east of Abingdon and to end at the Cumberland Gap in the most extreme Southwestern corner of the State. A small amount of work has been done in the neigborhood of Moccasin Gap in Scott County at a cost of $105,601. The work is now suspended.

22. *Winchester and Potomac Railroad.*

Chartered 8th April, 1831. Length from Winchester to Harper's Ferry 32 miles. Maximum grade west 26 feet and east 21 feet. Laid on sleepers resting on iron-ties with a rail weighing 16½ pounds to the yard. Capital authorized and paid in $300,000 of which the State owns $120,-000. In 1838 the State loaned the company $150,000. No dividends or interest was earned, and in 1847 the payment of these was commuted for an annuity of $5,000. Funded debt (besides the capitalized annuity) $144,736; floating debt $24,736. Cost of road, etc., $575,830. Gross earnings in 1859 from passengers $19,084, from freight $32,735, from mails $3,200, from other sources $11,950. Total earnings in 1855 $78,112, in 1856 $63,555, in 1857 $69,010, in 1858 $57,426, and in 1859 $56,369- Net earnings 1859 $594.

Illinois River Railroad.

The Illinois River Railroad is now open for travel. This road extends from Peoria to Jacksonville, and connecting at the former city with the Bureau Valley Railroad, and so with the Rock Island Road, forms a continuous line of rail from Chicago. This road passes through the richest agricultural region in the State, and with the completion of the Jacksonville and St. Louis Railroad will form a new and very direct route between Chicago and St. Louis.

Journal of Railroad Law.

Delay in Transportation of Goods; Company not liable for injuries to, occasioned by a Flood, while in their depot.

A case has recently been determined in the Supreme Court of Massachusetts, in which the action was brought to recover damages received by the plaintiff's wool while being transported from Suspension Bridge to Boston.

The wool was received by the New York Central Railroad Company at Suspension Bridge on the 27th of January, 1857, and it arrived at Albany on the 6th of February following; and while there in the company's freight depot, was submerged by a sudden and violent flood in the Hudson River, which caused the injury to the wool. The plaintiff brought his action against the company charging them with negligence in not sooner forwarding his wool from Suspension Bridge to Albany, in which case the wool would have been carried forward before the flood and no injury received, the time required for transporting merchandise, in the usual course of business from Suspension Bridge to Albany being forty-eight hours.

The defendants introduced evidence tending to show that the wool was carried safely and without delay over their route as far as Syracuse; that it was delayed there six days, and was then carried safely and without further delay to Albany; and was there deposited at the end of their route, in a safe and proper depot, with all due precautions against accidents to flood or otherwise; that the delay at Syracuse was caused by the fact that they had not a sufficient number of engines to transport the freight which was ready for transportion; that they provided engines sufficient to meet all usual demands and all exigencies which could be foreseen; that early in January, 1857, when they had a large surplus of engines, a season of unusually severe cold commenced, by reason of which cold their engines were broken at the rate of one a day for a fortnight, but that they had power enough for their business until the 20th of said January; that the delay at Syracuse was caused solely by the cause above stated, and that they made all proper efforts to forward the freight, and did forward it as fast as they could.

They also introduced evidence tending to prove that the flood which caused the injury to the wool was occasioned by the lodging of ice in the Hudson River, below the city of Albany, which formed a dam across the river, and caused a higher flood in that city than was ever before known; that the water rose four feet in fifteen minutes, and wet the plaintiff's wool; and that the defendants used their best exertions to secure the wool from injury by said flood.

The plaintiff received the wool at Boston, after it was injured by the flood at Albany, and sold it at a less price than it would have brought if it had not been injured.

It appeared from the defendants' books, which were introduced in evidence, that the car which contained the plaintiff's wool was detained at Syracuse two or three days longer than the other cars which left Suspension Bridge on the same train on the 27th of January.

The jury found a verdict for the plaintiff, assessing his damages at $421 07; but the case was reserved on motion of the defendants to set aside the verdict on the third question of fact found by the jury, as against the weight of evidence. That motion was argued first before the judge who presided at the trial, and was granted by him, and the case was then argued before the full Court on the questions of Law. The following is the opinion of the Court.

Merrick, J.—This action is brought to recover compensation for damages alleged to have been sustained by the plaintiff, in consequence of an injury to a quantity of his wool delivered to the defendants to be transported for him from Suspension Bridge to Albany. It appears from the report that the wool, directed to Boston, was received by them at the former, and carried to the latter place, and was there safely deposited in their freight depot. But it was not transported seasonably, nor with reasonable dispatch. By their failure to exercise the degree of care and diligence required of them by law, it was detained six days at Syracuse, and consequently arrived at Albany so many days later than it regularly should have been there. Whilst it was lying in the defendants' freight depot at Albany it was submerged by a sudden and violent flood in the Hudson River. This rise of water caused the alleged injury to the wool.

Upon the evidence adduced by the parties at the trial, three questions of fact were submitted to the determination of the jury. It is necessary now to advert only to the first of those questions; for the finding of the jury in relation to the second was in favor of the defendants, and the verdict in relation to the third has on their motion been already set aside as having been rendered against the weight of evidence in the case. * * *

It is now to be determined by the court whether the defendants are, by reason and in consequence of their negligence in the prompt and seasonable transportation of the wool, responsibe for the injury which it sustained after it was safely deposited in their depot at Albany. And we think it is very plain that, upon the well settled principles of law applicable to the subject, they are not.

It is said to be an ancient and universal rule resting upon obvious reason and justice, that a wrong doer shall be held responsible only for the proximate and not for the remote consequences of his actions. The rule is not limited to cases in which special damages arise; but it is applicable to any case in which damage results from a contract violated or an injurious act committed. And the liabilities of common carriers, like persons in other occupations and pursuits, are regulated and governed by it.

In *Marrison vs. Davis*, it is said there is nothing in the policy of the Law relating to common carriers that calls for any different rule, as to consequential damages, to be applied to them. In that case may be found not only a clear and satisfactory statement of the law upon the subject, but a significant illustration of the rule which the decision recognizes and affirms. It was an action against the defendants as common carriers upon the Pennsylvania Canal. It appeared that their canal boat, in which the plaintiff's goods were carried was wrecked below Peper's Dam, by reason of an extraordinary flood, that the boat started on its voyage with a lame horse, and by reason thereof great delay was occasioned in the transportation of the goods; and, that had it not been for this, the boat would have passed the point where the accident occurred, before the flood came, and would have arrived in time and safety at its destination. The plaintiff insisted that, inasmuch as the negligence of the defendants in using a lame horse for the voyage occasioned the loss, they were therefore liable for it. But the Court, assuming that the flood was the proximate cause of the disaster, held, that the lameness of the horse, by reason of which the boat, in consequence of his inability thereby to carry it forward with the usual and ordinary speed, was exposed to the influence and damages of the flood, was too remote to make the defendants responsible for the goods which were lost in the wreck. It was only, in connection with other accidents, a cause of the final, direct and proximate cause by which the damages sought to be recovered were immediately occasioned.

There is so great a resemblance between the circumstances upon which the determination in that case was made, and those upon which the question under consideration in this arises, that the decision in both ought to be the same. In this case the defendants failed to exercise due care and diligence, in not being possessed of a sufficient number of efficient working engines to transport the plaintiff's wool with the usual ordinary and reasonable speed. The consequence of this failure on their part was that the wool was detained six days at Syracuse. This was the full and entire effect of their negligence, and for this they were clearly responsible. But in all that occurred afterwards there was no failure in the performance of their duty. There was no delay and no negligence in any part of the transportation between Syracuse and Albany, and upon reaching the latter place the wool was safely and properly stored in their freight depot. It was their duty to make this disposition of it. They had then reached the terminus of their road; the carriage of their goods was then complete; and the duty only remained of making delivery. The deposit of the wool in the depot was the only delivery which they were required to make, and having made that, their liabilities as carriers thenceforward ceased. It was their to be received by the owner, or taken by the proprietors of the railroad next in course of the route to Boston. The rise of water in the Hudson, which did the mischief to the wool occurred at a period subsequent to this, and consequently was the direct and proximate cause to which that mischief is to be attributed. The negligence of the defendants was remote; it had ceased to operate as an active, efficient and prevailing cause as soon as the wool had been carried on beyond Syracuse, and cannot therefore subject them to responsibility for any injury to the plaintiff's property, resulting from a subsequent inevitable accident which was the proximate cause by which it was produced. It is to the latter only to which the loss sustained by him is attributable.

It follows from these considerations that the verdict in the plaintiff's behalf must be set aside and a new trial be had, in which he will recover such damages as he proves were the direct consequence of the negligence of which the defendants may be shown to have been guilty.

Gas-Light Companies of the United States.

The *American Gas-Light Journal* has the following interesting returns:—

The annual tables of gas-light companies will be found in this issue, the most noteworthy features of which are the decrease in the price of gas in several of the cities, and a slight increase in the number of gas-works in operation, as follows:

381 American Companies.....	$47,911,215
23 Companies in British provinces....	2,112,040
19 Cuban, Mexican, and South American companies.....	6,500,000
423 companies; aggregate capital....	$56,523,255

There is no question that the lower the cost at which good gas—of say 12 candles or higher brilliancy—is furnished, the greater will be the consumption, and necessarily the greater the profits to the manufacturers. This is beginning to be understood by gas companies, and the sooner it is acted upon, the better we are sure it will be for themselves. The paucity of gas-works on this extended continent must strike every reader. Take New York for instance—the Empire State of North American Confederation, with its area of 46,000 square miles, or 30,080,000 acres, of which 15,000,000 are improved; its extreme length nearly 480 miles, and its breadth 310 miles; with a population of at least 4,000,000, distributed in nearly 800,000 of families, occupying, perhaps, 600,000 dwellings in 45 counties, with 71 gas works to light them up. That is not much more than a gas-work to every county in the State.

New York is filled with populous and thriving cities, towns and villages, every one of which—we need hardly except one, whose inhabitants number 500 persons—can support gas-works. Look at Pennsylvania, with an equal area of territory—46,000 square miles, or 29,440,000 acres, of which some 10,000,000 are improved, and about 4,000,000 of population. Pennsylvania has 63 counties and but 48 gas-works, and yet we believe the actual capital in gas works owned in Pennsylvania is greater than in any other State, not excepting New York.

Massachusetts has 49 gas-works, with a territory to light up of 8,000 square miles, or 5,000,000 of acres, of which, perhaps, 2,500,000 are cultivated, and a population of about 2,000,000.

Illinois has 55,400 square miles of area and 13 gas-works. No State in the Union is more blessed with jaunty little towns and enterprising people. Everybody goes to Illinois to work, and it is time they set to work at striking a light.

Ohio measures, in area, 40,000 square miles, and numbers 87 counties. She has 30 gas-works, but then Ohio is full of pigs, and it would be a reflection upon that useful branch of illuminating material to slight their well tried ability to keep the *wick ed* portion of the community from utter darkness; we do not propose, therefore, to grumble at Ohio.

Great Britain, on the other hand, has 88,000 square miles and about 1,100 gas works. Why is it that Great Britain, with not twice the area of territory contained in the single State of New York, should have fifteen gas-works to our one, and three times as many on her little island as there are in the whole United States combined? We have, surely, plenty of money and abundance of enterprise. The subject of extending the area of gas-dom in this country is beginning to attract the attention of moneyed men, and they may rely upon it that a more sure and profitable investment is not to be found here or elsewhere. A hundred thousand dollars invested in three or four village gas-works will yield revenue enough for any reasonable man during his sojourn here below, and be a neat little monument to leave to his affectionate heirs when his own light shall have been extinguished by the waves of relentless Time. We repeat that, in order to moderately light the various towns on this continent, there are not less than twenty thousand gas-works yet to be built, and instead of concentrating the interest in mammoth corporations, they should be of moderate size and extent, economically built, honestly managed, and, by the reasonable price at which they furnish light, they should and inevitably will become the only means of meeting that universal want.

(*From the Courier and Enquirer.*)

New York vs. Pennsylvania.

LENGTH, COST, BUSINESS, AND EARNINGS OF THE NEW YORK AND PENNSYLVANIA RAILROADS.

State.	Roads in operation. Miles.	Cost of Roads in operation	Passengers carried.
New York.....	2,527	$147,980,402 21	12 138,059
Pennsylvania...	2,086	150,373,075 00	6,667,141
Over Penn'a..	441	....	5,470,918
Over N. York.	...	2,392,673 79	.....

State.	Tonnage. Tons.	Receipts from passengers.	Receipts from freight.
N. York..	3,859,283	$7,618,785 69	$9,977,216 62
Penn'a....	20,851,102	5,281,261 00	11,894,455 00
Over Pa	.....	$2,337,524 69	.....
Over N. Y.	16,991,819	.....	$1,417,238 38

State.	Total receipts from all sources.	Total expenses.
New York.....	$18,363,001 58	$11,089,550 91
Pennsylvania.....	18,186,604 00	14,107,444 00
Over Pennsylvania.	$174,400 58	.....
Over New York....	.....	$3,017,893 09

In the cost of the several works, Pennsylvania is $2,392,673 79 ahead of New York. In the passenger traffic, seven-eights of the number reported in Pennsylvania are local, and the same may be said of the tonnage, of which 9,133,348 tons were coal, 1,900,864 were merchandise, and the balance iron, iron ore, flour, lumber, etc., products of the State. The Pennsylvania Central being the only line connected with the West, but little of what is called "through frieght" has been carried over it. Out of an average during the last five years of 772,549 tons, it carried east 14 per cent., west 10½ per cent. The Baltimore and Ohio, out of an average of 810,802 tons, carried east 16⅝ per cent., west 7¼ per cent. The Erie, out of 864,624 tons carried east 20¾ per cent., west 7½ par cent. And the New York Central, out of 776,940 tons, carried east, 25½ per cent., west 5⅞ per cent. On the Erie Canal, out of the average of 3,804,907 tons, its through tonnage east was but 1,928,612, west 254,679 tons, including the local traffic. The traffic, therefore, on the Pennsylvania roads has hitherto been local. Hereafter, when the connections, and the second track is complete on the Pennsylvania Central, and when the Sunbury and Erie is complete to Erie, and the branch extended to Pittsburg, the results will be greater. Nine millions tons of coal is an item of some importance; and when we realize the fact that the business in pig metal was, last year, over 90,000 tons greater than the product of all the other States together, that the manufacture of railroad iron, in 1856, was 83,834 tons, out of 141,555 tons made in the country; that the anthracite iron trade, in 1856, reached 286,160 tons, in 1857, 281,980 tons, and that the leading branches of industry in and around Philadelphia exceed $185,000,000 per annum. But the State is "a one-horse team;" and as the trade at the port of Philadelphia, ten years since, was moved by 7,000 vessels, and last year 32,000, exclusive of those required in the movement of 2,000,000 tons through the Delaware and Raritan Canal, were required, we may recognize an improvement. The organization of a line of propellers to bring over the coal at a reduction of 50 cents per ton, is another of the schemes in which New York is interested. Fifty cents a ton off 4,000,000 tons consumed in the Eastern market, is $2,000,000 per annum—enough, almost, to purchase the canal, and make it a free channel to the producer. It may also indicate to our citizens that *the route*, of which this canal forms a part, may enable them to reach and intercept the trade they are about to loose on the North, and perhaps bring back to our waters the *Gaul*-way and other lines that have left us. J. M. S.

English and American Railways.

The remarkable success of the American people in spreading a net-work of railroads over a country so vast in extent as the United States begins to attract the attention and awaken the respect of the English nation. It is considered a marvel, not that the number of miles of finished road here should bear the relation 30,000 miles to 10,000 in the British Isles, but that the ratio to the respective populations of the two countries should be so largely in our favor. For every million of people in England there are 333 miles of rail; in the United States, 1,000 miles to each million is constructed.

But the most marked distinction between the result of this species of enterprise in the two countries is the greater dividends paid by American roads. Depressed as the stock of many of our great lines has been; loaded with debt seemingly almost inextricable, as is the case with several leading railroad companies, in the aggregate a higher per cent. of profit on this species of investment has been and continues to be realized in this country than in England.

Our roads have been constructed at a much less cost. The work of improving and perfecting them progresses long after the roads are profitably used, absorbing annually a portion of the receipts, without seriously interfering with dividends. The expenses of working the roads are also much lower in this country than abroad, which is another item in our favor.

The total cost of all the railroads in England is £320,000,000; that of the railroads in the United States only £240,000,000. Or, in other words, 30,000 miles here have cost but little more than two-thirds of the expenditure in England for 10,000 miles.

It is not strange that an advantage should be possessed by railroad investments in this country, where the capital expended in construction is so much less than abroad. The average dividends in the two countries as might be expected, other things being equal, are 4.1 per cent. in England against 6.7 per cent in the United States.

But the difference between the receipts of the roads of the two countries is not fully presented by this test of value. Constructed through thickly populated districts under the most perfect cultivation, and already developed nearly to their full power of production, English railways do not create new industry, and fail to scatter abroad the seeds of new productive energy, bringing into existence along every line a business before unknown. It is far different in the United States.

Nine-tenths of our roads when first traversed by steam pass through long ranges of woodlands in which the axe never resounded, cross prairies whose flowery sod has never been turned by the plow, and penetrate valleys wild as when the first pioneers followed upon the trail of the savage. They connect distant centres of population, and open communication with markets for an agricultural population in the very heart of the continent.

But no sooner is the great work achieved, than population pours into the rich wilderness, is scattered over the wide sweeping prairies, and settles in the fertile vales; and a way business springs up destined to increase each year for centuries to come. Villages soon dot the margin of the road. Factories turn to service the water power of the little streams it crosses. Out into the vast country, on either side, go the hardy sons of toil, ever increasing in number, and golden grain covers the lands that since the primeval time have been overshadowed by the dark forest.

Small receipts, when an American road is first opened, do not discourage. A productive energy is certain to be developed that will finally equal any capacity for business. The wealth of the forest and the mine as well as of garnered har-

vests will ultimately pass over this new mode of communication.

It will afford some surprise to learn that the fluctuations in American railway securities have not been greater than those of England. In the prosecution of these enterprises, we have needed capital, and hence few roads have been finished without incurring heavy debt. While way business is in the process of creation, it would naturally be supposed that deficient crops or any general financial embarrassment would depress railroad stock below any known precedent in a country where capital is so abundant as to lack safe modes of investment. But English journals being the witness, within a very recent period, English railway stocks have proved as variably as those least favored in the United States.

The passenger travel, populous as the British Isles are, falls below that over the roads of this country. Railways here carry all classes of the people. A large portion in England still travel in private carriages. The cheapness of fare on our roads, being only one-half of that paid in England, has become a great excitant of locomotion. Every inhabitant goes somewhere over these great public throughfares, and aids in swelling the amount of the gross receipts.

These facts exhibit the peculiar advantage of that form of government that interests every man in matters of public concern, and creates that new power in human affairs—the power of voluntary association.—*New Orleans Picayune.*

Ottoman Railway.

It appears that the Smyrna Railway will shortly be opened as far as Turbali, about 30 miles out of Smyrna. It must be a source of great satisfaction to the Directors that the works have so far advanced as to enable them to open a section this year, after all the difficulties they have had to encounter, and the delays incidental to all undertakings connected with the East. There can be little doubt but the opening of this section, short as it is, will inspire new confidence both as regards the Government and the public in Turkey, who readily admit the advantages to be derived, but cannot believe in the possibility of executing the work. As the first railway in Turkey, considerable interest must of necessity be felt in its success, apart from all considerations of profit, as it has been undertaken by Englishmen, and has experienced a more than usual share of obstacles in its progress, which nothing could have overcome but a conviction on the part of the Directors that they were engaged in a good cause, and absolute determination to steadily persevere until it was accomplished. Great exertions are being made by Mr. Crampton, the energetic contractor, to finish the section by the end of September. The Sultan and Ministers are expected to attend the opening.—*Herapath, Aug 15th.*

Novel Steam Car.

The new steam passenger car, recently constructed for the Eastern Railroad, and said to be intended for the road between this city and Boston, came over from Salem on Saturday, and attracted some attention at the Central Station. It looked like an ordinary passenger car, with two stove pipes sticking through the top, and a bell suspended between them. It stands rather higher from the rail than an ordinary car, and the machinery is underneath, between the forward wheels. The boiler, fire-box and water-tank occupy about eight feet of one end of the car, while the remainder contains seats for some fifty passengers. It is said to use one half the fuel required to do the same amount of work with an ordinary locomotive, while the wear and tear of the rail is much less, owing to the great reduction in weight, which is fifteen tons less than an ordinary locomotive. It is said to carry fuel and water sufficient for a run of fifty miles, while the speed is about the same as an ordinary locomotive. The time between Lynn and Salem was ten minutes. According to the Providence *Journal*, this machine is to be run on the Essex Road, between Salem and Lawrence—but, according to common rumor, it is to be placed on the track between Lynn and Boston.—*Lynn News.*

The Cities of the Lakes and the Mississippi Valley.

The expansion and progress of the United States, the up growth of new cities in the interior and the steady growth of old cities on the coast comprise a study, in which the actualities of time overtop and outreach both prophecy and anticipation. Predictions made in years agone have been realized before the periods fixed for the coming of the events described, and, altogether, the growth of the nation has been in a ratio exceeding expectations written down, fresh-born from the minds of the forethoughtful and the far-sighted.

In 1810, 50 years ago the population of the United States was but 7,239,814 and only two cities, Philadelphia and New York, then contained a population exceeding 50,000 inhabitants; in 1860 the population of the United States exceeds 30,000,000, and that part of the territory which comprises the basins of the Lakes and the Mississippi Valley contains *seven* cities exceeding 50,000 inhabitants each, and five cities exceeding 100,000 inhabitants each.

At the east portal of the Mississippi Valley, at the head of the Ohio River, Pittsburg, with its contiguous suburbs, numbers more than 100,000 souls; lower down the Ohio, Cincinnati sits upon its banks, covering with homes 158,851 indwellers; and still farther down the Ohio, and upon the opposite bank, is Louisville, containing 70,172 inhabitants. These are the three principal cities of the Ohio river basin, and of the rich domain lying within its rim.

On the Mississippi river, far down the Ohio and near its mouth, is New Orleans, numbering 170,766 inhabitants, a large number, it is true, yet in this case only the *nucleus* of the NEW ORLEANS which in future time shall be the shipping port of the great valley from which the "father of waters" bears tribute to the gulf. And on the Mississippi river, above the Ohio and near the mouth of the Missouri, stands St. Louis with its 161,000 inhabitants—a city which is sure to become the seat of immense manufactures and a vast trade with an interior country that reaches back far away to the Rocky Mountain west.

Then passing across the Lakes we find, at the south end of Lake Michigan, the city of Chicago, containing 109,000 inhabitants, and which is the scene of transactions in cereals harvested in Illinois and vicinity, measured by millions of bushels, furnishing freights for lines leading by rail and water to the seaboard. At the east end of Lake Erie is Buffalo, with its 81,561 inhabitants; whilst between Buffalo and Chicago there is Erie City, in Pennsylvania, with its 11,113 inhabitants; Cleveland, in Ohio, with its 43,550 inhabitants; Toledo, in the same State, with 13,779 inhabitants; Detroit, in Michigan, with 46,834 inhabitants; and Milwaukee, in Wisconsin, with 45,323 inhabitants.

These lake and river ports are each distinguished by characteristics and physical advantages not enjoyed in common, the whole number being the product of a vast interior trade and of interchanges with the sea ports. Between the Lakes and the Ohio and Mississippi rivers, moreover, there are growing cities and busy towns, where is gathered the surplus crops of the surrounding country for shipment hence by rail, and whence is distributed through local stores the merchandise imported from the cities at tide-water.

In every State and territory between Pennsylvania and the Rocky Mountains, there are river or lake ports, and inland towns accessible by rail, with which Philadelphia should cultivate a trade, and in which she should find a market for her manufacturers or her merchandise, because, over her own lines and their ramifying connections she possesses superior facilities for cheap transport and prompt distribution. By fostering a more intimate and more general acquaintance with merchants and others in the Northwest, West and Southwest, Philadelphia would make new friends and new customers. Acquaintance by visitation begets pleasing relations and promotes commercial transactions to mutual profit. Hence, whilst it would be a source of gratification to a business man to visit the States west of the Alleghany watershed, it would also be a cause of increase in his mercantile operations and in his profits in his year's account. No man can visit the West, Northwest, Southwest or South, without having his mind expanded, his head made clearer and his heart made bigger, provided he have intelligence to understand and appreciate the sights which will greet him through his organs of light and sound.—Hence it is good to travel, and he that travels oftenest and farthest gathers the largest fund of information, to apply in the civilities of social life and in the transactions of the exchange and counting room.—*United States Railroad and Mining Register, 13 inst.*

The Cotton Crop of the U. S,

The annual statement of the Cotton Crop of the United States for the year ending August 31st, 1860, has just been completed at the office of the *Shipping List*. The crop is the largest by far ever made, the aggregate being in excess of all but the most sanguine estimate. We annex a comparative table of receipts, specifying from what source they were derived:

Receipts of Cotton at the Ports of the U. States.

	1856-7	1857-8	1858-9	1859-60
N. Orleans.	1,435,000	1,576,409	1,669,274	2,139.425
Mobile....	503,177	522,364	704,406	843,012
Florida....	136,344	122,351	173,484	192,724
Texas.....	89,882	145,286	182,062	252,424
Georgia...	322,111	282,973	475,788	531,219
S. Carolina	397,331	406,251	480,653	510,109
N. Carolina	27,147	23,999	37,482	41,194
Virg'a, &c.	28,527	34,329	118,332	165,663
Total crops, bales.....	2,939,519	3,113,952	3,851,481	4,685,770

The largest previous crop was last year, and the next larger was the crop of 1855-6.

The total exports to foreign ports for the year just closed were 3,774,173 bales, divided, in comparison with previous years, as follows:

Total exports of Cotton from the United States to foreign ports.

To—	1856-7	1857 8	1858-9	1859-60
G. Britain.	1.428,870	1,809,966	2,019,252	2,669,482
France....	413,357	384,002	450,696	589,587
N. Europe.	245,798	215,145	330.012	295,072
Other for'n ports.....	164,632	181,342	221,443	220,082
Total bales	2,252,657	2,590,455	3,012,408	3,774,178

It will be seen from this that a very large proportion of the increased crop has been shipped to Great Britain. An immense stock is now on hand at Liverpool, and this, in connection with the anxiety about the harvests, has kept the market there very much unsettled and depressed.

The following will show the stock of cotton (in bales) on hand at the different ports of the United States on the 1st of September:

Stock of Cotton on hand in the United States.

	1857.	1858.	1859.	1860.
New Orleans....	7,321	30,230	26,022	78,934
Mobile	4,404	10,495	20,106	41,682
Florida.....	56	80	236	864
Texas.....	962	1,899	2.655	8,178
Savannah & Aug.	4 673	2,585	18,383	9,559
Charleston	5,644	11,715	17,502	8,897
Virginia, &c	410	600	375	4,609
New York	16,778	25,000	43,452	64 891
Other North'n pt.	8,200	20,322	20.416	20,204
Total bales ...	39,258	102,926	149,237	227,708

The consumption of the United States is reached by deducting the exports and stock on hand from the known receipts to show the consumption in the Northern States, and by estimating the consumption in the Southern States. The consumption at the South, 185,522 bales, (including that burnt at

the ports,) is to be added to the crop receipts to make the total production. If this be done, and we add stocks in interior towns, and deduct the portion of the new crop received before September 1st, (51,600 bales,) we shall make the total *growth* of cotton the last year in the United States 4,811,800 bales.

Railroad Earnings.

The following are the comparative earnings of the Pacific Railroad for Sept., 1859 and 1860:

MAIN LINE.

	1859. (168 miles.)	1860. (176 miles.)
Passengers	$30,207 99	$29,318 00
Freight	28,360 66	37,505 25
Mails	2,100 00	2,200 00
	$60,668 65	$69,023 25
Increase		$8,354 60

SOUTHWEST BRANCH.

	(18 miles.)	(71 miles.)
Passengers	$578 55	$2,419 05
Freight	828 92	5,182 90
Mails		289 50
	$1,407 47	$7,891 45
Increase		$6,483 98

The earnings of the Toledo and Wabash Railway for September, 1860, were $106,100 82
September, 1859..... 74,689 09
Increase..... $31,411 23

The earnings of the St. Louis, Alton and Chicago Railroad, for September, were:

Passengers	$36,382 69
Freight	55,031 87
Mails and Express	3,300 00
Total	$94,713 96
Corresponding period in 1859	82,884 00
Increase	$11,829 96

The following is the Illinois Central Railroad Company's statement for September, 1860:

Land Department.

8,494 84	acres sold for		$138,630 16
31,647 25	"	since Jan. 1	505,280 45
1,237,260 55	"	previously,	15,735,837 02
1,268,907 80	"	Total	$16,241,117 47
Bonds canceled in September			$54,000 00
"	"	previously	1,752,500 00
Total bonds canceled			$1,806,500 00
Cash receipts in September, 1860			$80,649 88
Total cash and bonds received to September 30, 1860			$3,763,093 65

NOTE.—Cash receipts in September, applicable to cancelation of Construction Bonds, $48,950 01; applicable to cancelation of Free Land Bonds, $1,457 01; applicable to Interest Fund, $24,623 23. Miscellaneous accounts, $2,619 63.

Traffic Department.

Total receipts for September, 1860	$257,633 83
Do. do. 1859	246,655 59
Increase	$10,978 24
Total receipts since Jan. 1, 1860	$1,878,164 47
Do. correspond'g period, '59	1,424,462 88
Increase	$453,701 59

Annexed is the September report of the Receiver of the Milwaukee and Mississippi Railroad:

	1859.	1858.
Freight	$78,743 10	$113,606 07
Passengers	24,800 20	22,934 70
Mails and sundries	1,835 41	3,502 87
Total	$104,878 71	$140,043 64
Increase in September, 1860	$35,164 93	

The revenue of the Baltimore and Ohio Railroad for September was:

MAIN STEM.

From Passengers	$73,126 17	
" Mails	7,833 34	
" Express	3,713 20	
" Tonnage	307,209 38	
		$391,882 09

WASHINGTON BRANCH.

From Passengers	$33,339 98	
" Mails	1,000 00	
" Express	1,100 00	
" Tonnage	7,360 93	
		46,800 91

N. W. VIRGINIA BRANCH.

From Passengers	$4,758 15	
" Mails	866 66	
" Tonnage	24,075 18	
		29,699 98

Summary of Revenue for Sept., 1859 and 1860.

	1859.	1860.
Main stem	$333,250 51	$391,982 09
Washington Branch	40,426 03	42,800 91
N. W. Virginia Railroad	19,527 42	29,699 98
Totals	$393,203 96	$464,382 86

The fiscal year of the Company ended September 30th. The business of the year compares with that of the previous year as follows:

	1859-'60.	1858 '9.
October	$416,929 61	$391,395 10
November	421,287 56	380,879 75
December	355,662 13	336,202 25
January	282,070 64	314,201 00
February	332,743 77	308,631 78
March	425,487 08	400,984 68
April	406,428 36	360,761 15
May	435,133 28	391,019 17
June	374,437 59	350,444 16
July	383,037 91	304,161 25
August	453,397 07	374,124 93
September	464,382 98	393,203 96
	$4,760,997 98	$4,301,009 18
	4,301,009 18	
Increase present y.	$459,988 80	

Annexed is a statement showing the freight and passenger business, also the total receipts, for September, in comparison with the corresponding month of 1859, on the Housatonic Railroad:

	1859.	1860.	Increase.
Freight	$16,808 46	$20,195 78	$3,387 27
Passengers	11,540 57	11,996 55	455 98
Total receipts in Sep.,	1860.	$33,124 45	
Do. do.	1859.	29,281 19	
Total increase			$3,843 26

The earnings of the Cleveland, Columbus and Cincinnati Railroad for September were:

September, 1860	$122,356 54
September, 1859	97,613 71
Increase	$24,742 83

The earnings of the Cincinnati, Hamilton and Dayton Railroad for September were:

September, 1860	$72,176 78
" 1859	47,420 77
Increase	$24,756 01

About $20,000 of this increase is attributed to the fairs held on the line of the road, and extra trains for political gatherings. The following is a statement of earnings the past three months:

	1859.	1860.	Increase.
July	$41,241 60	$46,691 05	$5,449 45
August	46,082 22	50,894 58	4,812 36
September	47,420 77	72,176 78	24,756 01
Total	$234,744 59	$169,762 41	$35,017 82

The earnings of the Dayton and Michigan Railroad for September, 1860, were:

Freight	$18 517 37
Passengers	17,676 50
Mail and express	2,462 50
Total	$38,656 37

—being an increase of above $400 over the month of August.

The following is a comparative statement of earnings and expenses of the Buffalo and State Line Railroad Company for the month of September, 1859 and 1860:

EARNINGS.

	Sept., 1859.	Sept., 1860.
Passengers	$41,963 49	$47,687 73
Freight	35,761 96	40,313 10
Other sources	1,910 00	1,891 89
Total	$79,635 45	$89,842 72
Increase		$10,207 27

EXPENSES.

Construction	$300 00	
Maintaining road	12,766 92	$24,528 41
Repairs of machinery	5,215 94	7,790 95
Operating	19,093 70	13,261 15
Total	$37,376 56	$45,580 51
Increase		$8,203 95

Jos. W. Alsop, Receiver of the Ohio and Mississippi Railroad, has filed his fifth monthly report with the Clerk of the United States District Court. The following is an abstract:

Balance on hand from July account		$26,935 48
RECEIPTS.		
Freight earnings of July	$1,651 78	
Passengers prior to August	7,480 58	
Freight do.	4 295 82	
		13,428 18
Passenger earnings in Aug.	36,298 79	
Freight do.	21,515 35	
		57 814 14
Mail service up to June 30		10,856 25
From other sources		10,130 92
Total		$119,173 97

DISBURSEMENTS.

Paid on account 1st mortgage bonds, Coupons of interest due July 1st, 1858	$245 00	
Do. due January 1, 1859.	8,780 00	
Interest and discount	759 11	
Office and other expenses	708 64	
Charges advanced on acc't other roads	191 99	
On acc't of telegraph line.	51 54	
On acc't of former arrearages	371 46	
Current operat'g expenses, and construction work for July	57,591 04	
		68,698 78
Balance carried to September acc't		$54,475 19

The receipts of the Grand Trunk Railway of Canada for the week ending October 6th, 1860, was $80,523 47
Corresponding week last year 58,697 96
Increase $21,825 51
Total traffic from July 1, 1860, to date. $883,149 14
Corresponding period, 1859 ..... 653,888 04
Increase $229,311 10

The receipts of the Central Ohio Railroad for August amounted to $63,023 00
For July 48,642 81
Increase $14,380 19
The expenses for August were $37,488 59

The earnings of the Erie Railroad for the month of September, 1860, were $600,124 06
Earnings, September, 1859..... 462,798 45

Increase $137,826 61

The following is a comparative statement of the business of the North Pennsylvania Railroad Company:—

Earnings in September, 1860 ..... $35,251 12
Do. do. 1859 ..... 32,778 03

Increase $2,473 09
In first ten months of fiscal year..... $319,645 07
Same months last year..... 280,834 40

Louisville and Memphis Railroad.

The opening of this road, from Louisville to Clarksville, was inaugurated in an appropriate manner on the 18th ult. The Louisville *Courier*, of the 26th, thus speaks of it:

The Board of Directors of the Louisville and Nashville Railroad, accompanied by a number of gentlemen whom they had invited to accompany them, left the depot in this city, on a special train, on Tuesday morning, and stopping at the more important points on the road to Bowling Green, from thence, for the first time, passed over the Memphis Branch to the State Line, where they were met by a special train from Clarksville, on which were the officers of the Clarksville road, the authorities of the city of Clarksville, and a large number of citizens, by whom, through Mr. Quarles, the President of the Clarksville road, they were received and heartily welcomed to Tennessee. amid the roar of cannon, heart stirring music, and the warm congratulations of friends who are hereafter to be neighbors,

At night a magnificent banquet was spread at which several hundred were seated, and all the delicacies of the season, prepared in every variety of cookery and displayed in every style that could tempt the appetite or inspire the taste, were accompanied with the finest wines, the most sparkling, and the intensest patriotism—of course the Union was saved—the whole affair reflecting equal credit on the hospitality, skill, taste, tact and good judgment of the whole-souled people of Clarksville.

English Railway Statistics.

In 1857, says an English Journal, the linear extent of English railways exceeded the ten chief rivers of Europe united; and more than enough of single rails were laid to make a belt of iron round the earth. The tunnels, joined together, would stretch more than seventy miles; the viaducts in the vicinity of the metropolis alone would reach 11 miles; and the earthworks measured 550,000,000 of cubic yards—a mass of material, which, if piled in a pyramid, would rise 2½ miles high, with a base larger than St. James's Park; 80,000,000 of train miles were run annually. The total number of stations amounted to 3,121; 5,000 engines,, with 150,000 vehicles, composed the working stock; and 109,660 officers and servants were employed. The engines, in a straight line, would extend from London to Chatham, and the vehicles from London to Aberdeen; 2,000,000 of tons of coal were annually consumed; and in every minute of time, 20 tons of water were flashed into steam by 4 tons of coal. The coal consumed is almost equal to the whole amount exported to foreign countries, and to one-half the annual consumption of London. Such was the wear and tear, that 20,000 tons of iron were required to be replaced per year; 2,000,000 of sleepers out of 26,000,000 laid down annually perished; and 300,000 trees, equal to 5,000 acres of forest, must be annually felled to make up the loss. In 1853, 111,000,000 of passengers were conveyed, each passenger traveling an average of 12 miles. A curious calculation has been made. Twelve miles by railway are accomplished in half an hour, whereas the old stage coach required an hour and a half to get through the distance. The aggregate time thus saved for the above number of passengers is equal to *thirty eight thousand years*. But in 1857, the number of passengers amounted to 139,008,888, and the receipts from all sources were £24,174,616.

Iron for the Wills' Valley Railroad.

The Wills' Valley Railroad, which has struggled for so many years, against various financial difficulties, and which has drawn so largely upon the *vitality*—so to speak—of our young city, is at length beginning to see day-light. The company have just closed a trade with the "Atlanta Rolling Mill Co." for iron enoughto lay their track to Trenton, Ga.—They make this purchase upon favorable terms, paying part in cash, and part in the bonds of the company. The first instalment of iron is to be furnished early in November, when tracklaying will be immediately commenced. The cross-ties are already purchased, and on the ground. A locomotive and the necessary cars are also engaged, so that a Railroad to Trenton, begins to look more like a fixed fact. The completion of this first section, will inspire confidence among all the friends of the road, and will enable the Directory to push forward their work with greater rapidity than they have hitherto done. We predict also that the extension of the iron track, eighteen miles into a new field, will bring an appreciable increase of trade to our town, and thus the first fruits of this great enterprise will begin to flow in upon us.—*Chattanooga Advertiser.*

Pilot Knob, Cape Girardeau and Belmont Railroad.

The following gentlemen have been elected directors of the Pilot Knob, Cape Girardeau and Belmont Railroad Company:

John M. Gohlson, Madison county; David Rhodes, do; Jason H. Hunter, Julius M. Snider, James C. Noell, Bollinger county; Thos. B. English, A. T. Lacey, R. Sturdivant, Sam. Daugherty, Geo. H. Cramer, Will. C. Ranney, Cape Girardeau county; Albert G. English, Scott county; Thomas Brown, Mississippi county.—*St. Louis News.*

St. Louis Passenger Cars.

Those who visited the machine shop, at the Fair Grounds, will doubtless recollect that there were two elegant passenger street railway cars on exhibition. The difference in their relative merits was so slight that it was very difficult to tell which was the best, and even then it was entirely a matter of opinion. The fact is they were both beautiful specimens of mechanical skill, and reflected great credit on the establishments which turned them out. It is gratifying to know that there are two railway freight and passenger car manufactories in operation in St. Louis, and that they both turn out first class work.

The car of which it is our present purpose to speak is that exhibited by Messrs. S. B. Lowe & Co., of St. Louis, an establishment that has been in operation for several years. Messrs. S. B. Lowe & Co., have manufactured a very large number of cars for Missouri railways and also for those in other Western and Southern States, and have established a reputation for their work second to that of no similar establishment either East or West. They are the first car builders of St. Louis, and are now the most extensive manufacturers in their line in our city.

The car they exhibited was manufactured to order, and was an elegant specimen of that class of architecture. It was a street passenger railway car, substantially built, and elegantly furnished and painted, capable of seating thirty persons comfortably, well lighted and ventilated, and supplied with soft and easy cushions. The painting on the body of the car was of the most artistic character, and shone brilliantly in that portion of the machine shop which it adorned. We were unsuccessful in finding Mr. Lowe yesterday, and are unable to give such statistics as we would desire relative to his establishment; but at some future, and no very distant day, we will do this enterprising firm full justice in this respect.—*St. Louis Republican.*

Pneumatic Piles.

In the Journal of September 8th we published a very interesting description of the method of sinking piles by Pneumatic process, from the pen of Wm. Sooy Smith, Esq., Civil Engineer, and Secretary of the *Trenton Locomotive and Machine Manufacturing Co.*, who have the contract for furnishing the material and machinery, and sinking the cylinders, for the bridge now in course of erection over the Savannah river on the line of the Charleston and Savannah railroad. In our introductory remarks thereto, we inadvertently stated that "the work was executed" "under the direction of its engineer," etc., to which exception has been taken by W. P. Miller, Esq., the Engineer in charge of the bridge. If we mistake not, the article in question was written by our suggestion, and is, what it purports to be, simply a description of the means employed to effect the desired object. We cannot see that the writer has made any allusion to himself, or to the progress of the work.

Panama Railroad.

The decrease of the earnings of the Panama railroad for the last nine months amounts to $525,143 or nearly 33 per cent. Publishing this statement the New York *Herald* says:

The causes of the decline in the business of the road are obvious. They are, firstly, the war in New Granada, which has now fairly broken out, and which will probably last a long time. This, like the war in Mexico, which has lasted for thirty years, with occasional interruptions, has checked business, and stopped the gathering of bark, cochineal, hides, drugs, &c., which are the produce of the country, and on the supply of which the road depends for its freighting business. Secondly, the decline in the passenger travel to California is quite a serious loss to the road. The best emigrants to California are now crossing the Plains, and avoiding the dangers of the Isthmus. These drawbacks are the more serious, as there are only fifteen years left of the Panama Railroad lease; in 1875 the road reverts to the New Granadian Government. Mr. Sanford's mission to Bogota to obtain a renewal of the lease was, as is known, a complete failure, and there is very little prospect at present of another negotiator meeting with more success. The New Granadians are determined to have the road; if any government did grant a renewal its successor would probably repudiate it.

Southern Pacific Railroad.

Col. V. K. Stevenson has accepted the presidency of the Southern Pacific Railroad, and has gone to Europe in connection with matters pertaining to the interests of the road. The Nashville *Banner* learns that the New York agent of a French and German house has signified to Col. Stevenson that his principles will contract to build the entire road, taking one-half of the pay in the stock of the road with a mortgage of the lands of the company as security.

Albany and Susquehanna Railroad.

The Unadilla *Times* states that at a meeting in that village, Mr. Watson, one of the directors of the Susquehanna Railroad, "made some general remarks in relation to the road, and stated that the directors had concluded to take notes from the stockholders for their instalments, payable in one year."

A Long Chain of Railroads.

There is now a continuous chain of railroads from Bangor to New Orleans, composed of eighteen independent roads, costing in the aggregate for 2,244 miles of road $59,354,081, or nearly one-tenth of the whole railway system in the United States.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterisk* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in *"italics."*

American Railroad Journal.

Saturday, October 20, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

Grand Trunk Railway of Canada.

We see it stated, what has been for a long time expected, that a crisis is imminent in the affairs of this company. The leading London creditors are moving to get back some portions of their advances made to it. Such a step must be followed by default on the obligations of the company, which will very probably extend to the interest on the company's debentures.

The failure of this company will be a calamity of no small magnitude. It has invested the sum of $60,000,000 in its works. The greater part of this vast sum has been supplied by the London stock and bondholders, who have derived no incidental advantage whatever from their investment. The loss they suffer, consequently, will be a total one. Although the share and bondholders probably number an unusually large proportion of persons of wealth, very large sums are probably held by parties who depend upon the securities they hold for their daily support.

What is to be done in the event of the failure of the company is not yet indicated. But we take it that an effort will be made to have the Province assume the whole enterprise, issuing therefor its debentures at a low rate of interest. There can be no question of the equity of such an arrangement. The project was inaugurated and placed before the public under the auspices of the Colonial Government. We have before us the *prospectus* first issued, in which the Inspector General; Solicitor General; Receiver General; Postmaster General; President of the Executive Council, and other officials appear as Directors. This prospectus undertakes to demonstrate that the net earnings of the road would equal to 11½

per cent. on the share capital. As a voucher for this estimate, a long document, signed by Lord Elgin, Governor General of the Province, was added, giving a glowing account of its resources and prosperity. The London direction presented an equal formidable display of great names. The scheme there was vouched for by Baring Brothers, and Glynn, Mills & Co., the leading bankers of the great Metropolis.

A person who knows anything of Englishmen will at once see that a scheme so presented could have all the money wanted for the asking. And who is the party responsible for the representations made? Clearly the Canadian Government. Its members, if any body, understood the subject upon which they assumed to speak. They were placed on the directory for the weight attached to their official positions. The money was subscribed and paid upon the faith attached to their public characters and to the familiarity which they were presumed to possess in the wealth and resources of the country.

The works of the company have been constructed. The advantage to the Province is incalculable. But this is probably the only advantage that is to result. They cannot prove productive. Under these circumstances should not the party benefitted bear the burden of their cost? There can be but one answer to this; and we are confident that in the end, there will be but one answer. The London stock and bondholders are not going to quietly pocket their losses. The most energetic representations will be made to the Colonial Government for relief, backed if necessary, by the Imperial Government. Unless Canada steps forward for their relief, her people will will find themselves on a very disagreeable footing with those of the mother country. The idea that a loss of some $35 or $40,000,000 is to be made by them for the benefit of Canada is not to be thought of, and the sooner that the crisis is properly met the better. Canada can well afford to issue debentures for the cost of the whole works, at 3 or 3½ per cent. and find herself vastly richer for the whole transaction. But she is not going to enjoy this advantage at the expenses of the unlucky share and bondholders living some 3,000 miles off, who are not benefitted a penny by what has made her rich and prosperous.

Population of the City of Cleveland.

	1860.		1860.
First Ward	4,886	Seventh Ward	2,178
Second Ward	4,605	Eighth Ward	2,256
Third Ward	2,777	Ninth Ward	3,638
Fourth Ward	5,569	Tenth Ward	2,570
Fifth Ward	4,901	Eleventh Ward	3,217
Sixth Ward	6,953		
Total			43,550

Cleveland in 1850, before the addition of Ohio City, which embraced the 8th, 9th, 10th, and 11th Wards, had a population of 17,034. By the late Census, the same Wards have a population of 31,869, being an increase in ten years of 14,335.

Ship Island Railroad.

Some prospect now exists of the work on this proposed road being soon commenced. The amount of means in the hands of the company that may be made available is $2,675,000, consisting of old and new subscriptions—stock offered to be taken by contractors, State aid, and lots in Mississippi City. The completion of the work, its engineer estimates, can be secured with $3,500,000. —*N. O. Picayune.*

Evansville and Crawfordsville Railroad.

The business of this company for the year ending August 31st ult., compares with that of the year previous as follows, viz:

Earn'gs for year ending	Aug. 31, '60.	Aug. 31, '59.
Passengers	$81,989 19	$83,143 32
Freight	112,266 89	75,565 97
Express	3,356 19	3,627 61
Mail	8,250 00	8,250 00
Rents	1,082 10	462 00
Total Earnings	$206,944 27	$171,048 90
Operating Expenses	*102,970 80	97,797 37
Net Earnings	$103,973 38	$73,251 53

*Including $4,897 13 for re-building Engine House at Terre Haute, blown down by Tornado, and repairing damage to Locomotives and Cars at same time.

Increase of gross earnings	$35,895 36	21 per ce't.
do expenses	5,173 52	5¼ "
do do deducting damages by Tor'do	276 39	¼ "
Increase of net earnings	30,722 85	32 "

J. E. MARTIN, Secretary.

OFFICE OF THE E. & C. RAILROAD CO.
Evansville, Sept. 26th, 1860.

September Earnings.

The earnings of the principal railroads for the month of September, 1859 and 1860 comparatively so far as reported have been as follows:

Railroads.	1859.	1860.	Increase.
New York Central	$743,599	$851,796	$108,197
New York and Erie	462,797	600,124	137,327
Baltimore and Ohio	392,203	464,883	71,680
New York & N. Hav.	90,554	92,052	1,498

Dayton & Michigan	.....	38,656	.....

Debt of Savannah.

The funded debt of Savannah, at the present time amounts to	$1,872,840
The floating debt of the city to	59,180
Total funded and floating debt	$1,932,020

Against this amount the city owns—

2,000 shares	in Atlantic and Gulf R. R.	$ 200.000
2,517 "	in Augusta and Sav. R.R.	251,700
731 "	in Southwestern Railroad.	73,100
1,189 "	in Mong'y & W. Pt. R. R.	118,900
10.382.26 "	in Sav. Albany & Gulf R.R.	1,038,326
16.820.26 shares		$1,682,016

These stocks were paid for chiefly in city bonds, all the interest upon which has been punctually met, either by dividend receipts or by the ordinary revenues of the city.

☞ The first five miles of the Henderson and Nashville Railroad were completed on Monday last, according to contract.

Agricultural Statistics of Ireland

In the Belfast (Ireland) *News Letter*, of the 19th ult., we find an abstract of the usual Annual Report of the Register-General of the agricultural and other statistics of Ireland. We extract a few items, which are of interest to our readers. The returns of live stock show a general decrease, except hogs (pigs.) The comparison is as follows:

	1859.	1860.	
Horses	629,075	620,938	8,137 Dec.
Cattle	3,815,598	3,599,235	216,363 Dec.
Sheep	3,592,804	3,537,846	54,958 Dec.
Pigs	1,265,751	1,268,590	2,839 Inc.

There is a large decrease in the number of acres cultivated in 1860, as compared with the previous year, though there is an increase as regards wheat and barley, but a large falling off as regards oats. The following is the comparison:

ABSTRACT OF CEREAL CROPS.

	1859. Acres.	1860. Acres.	Incr. Acres.	Decr. Acres.
Wheat	464,175	469,642	5,467	.....
Oats	1,982 662	1,961,384	.....	21,278
Barley	177,894	180,964	3,070	.....
Bere and Rye.	13,198	12,822	.....	376
Beans & Peas.	14,851	12,745	.....	2,106
Total	2,652.780	2,637,557	8,537	23,760

Decrease in cereals in 1860 ..... 15,223 acres.

ABSTRACT OF CEREAL CROPS.

	1859. Acres.	1860. Acres.	Incr. Acres.	Deer Acres.
Potatoes	1,200,347	1,171,837	.....	28,510
Turnips	322,137	318,694	.....	3,446
Mangel Wurzel and Beet Root	27,054	32,060	5,006	.....
Cabbage	31,600	22,749	.....	8,931
Carrots, Parsnips & other green crops	21,971	21,613	.....	358
Vetches and Rape.	33,243	40,533	7,290	.....
Total	1,636,432	1,607,483	12,296	41,245

Decrease on green crops in 1860 ... 28,949 acres.
Total increase in the extent of land under crops in 1860 ..... 105,365 acres.

TOTAL NUMBER OF LIVE STOCK IN IRELAND IN THE YEARS 1855, 1859 AND 1860.

	Horses.	Cattle.	Sheep.	Pigs.
1855	556,287	3,564,400	3,602,342	1,177,605
1859	529,075	3,815,598	3,592,804	1,265,751
1860	620,938	3,599,235	3,537,846	1,268,590

With regard to emigration, the report says that the number of emigrants from each province during the first eight months of 1859 and 1860, were as follows:

Leinster—1859, 3,332; 1860, 10,124; net increase, 1,792.

Munster—1859, 14,476; 1860, 20,639; net increase 1,792.

Ulster—1859, 28,460; 1860, 19,646; decrease, 8,814.

Connaught—1859, 6,054; 1860, 6,890; net increase, 836.

From what Province not stated—1859, 2,087; 1860, 4,886; net increase 2,799.

From All Ireland—1859, 59,409; 1860, 62,185; net increase, 2,776.

The total number of emigrants from Ireland—according to the returns—from 1st. May, 1851, to 1st. September, 1860, including males and females of every age, was 1,150,982.

East Texas Railroad.

The Sabine Pass *Times* says that there are now 400 hands at work on the East Texas Road, and 150 more shortly to arrive. The grading of the first fifty miles will be completed by the 20th of October. The iron will begin to arrive in October, and it is expected to have the road finished to Beaumont by the 15th of December.

Insurance Dividends.

The following table embraces the dividends declared by the Fire insurance companies of this city for the months of June and July, 1860:

Companies.	Capital.	Per ct.	Divid'd.
JUNE DIVIDENDS.			
Bowery	$300,000	10	$30,000
Howard	250,000	10	25 000
Manhattan	250,000	10	25,000
North American	250,000	5	12,500
Total	$1,050,000		$92,500
JULY DIVIDENDS.			
Ætna	$200,000	5	$10,000
Adriatic	150,000	5	7,500
American (also Scrip divid. of 50 per ct.)	200 000	3½	7.000

Cumberland Valley Railroad.

The stockholders of this company met on Monday last, and elected the following officers and managers.

President—FREDERICK WATTS.

Treasurer and Secretary—E. M. BIDDLE.

Managers—Washington Butcher, J. Hulme, Daniel O. Gher, Wister Morris, Thomas A. Scott, (in place of W. B. Foster, jr., deceased)

New Motive Power.

The Paris correspondent of the London *Star* states that the whole of the scientific world is in a state of revolution at the bare prospect of the success obtainable by M. Lenoir's new motive-power, for which we have been prepared for many months past. The trial has been made at last, and the result has excited the greatest interest throughout Paris. As usual in all great discoveries, that made by M. Lenoir is found upon the simplest fact in science, being merely the application upon a large scale of one of the elementary experiments of chemistry—that of the synthesis of water in the radiometer. He has simply utilized the principle of the expansion of air when at a lofty temperature, by means of combustion through the spark of induction of hydrogen. The economy produced is calculated at not less than 40 per cent. by the suppression of the boiler, the chimney and the other accessaries hitherto used in the construction of steam engines. The machine itself offers a saving of thirty per cent. Several engines varying, from five to ten-horse power, constructed by Marinoni, have been dispatched to England and Belgium. M. Hardouin has ordered one of twenty-horse power for the works hurrying on in the Isthmus of Suez. This new machine, which seems to realize every dream of inventor and manufacturer, by offering an immense result of power in exchange for a merely nominal supply of fuel, is about to be tried in some of the French railways. Until then it would premature to pronounce the assertions made by the inventor and his friends as the results of proof.

Peoria and Oquawka Railroad.

We understand that the new directors of the Peoria and Oquaka Railroad have offered Moss, Harding and & Co. $50,000 for the portion of road between Galesburg and Burlington, which was refused, Moss, Harding & Co. alleging that they can obtain a larger sum from the Chicago Burlington and Quincy company. We are not at all acquainted with the powers of Messrs. Harding & Co. in this matter; we don't know whether they have the legal right or not to sell out this piece of the road, and destroy the interests of Peoria, but it strikes us that whatever can be done to prevent the sale of the west end of the P. & O. road to the C. B. & Q Company, ought to be done without delay.—*Peoria Times.*

HISTORY

OF THE

RAILROADS

AND

CANALS

OF THE

UNITED STATES

OF AMERICA,

EXHIBITING THEIR

Progress, Cost, Revenues, Expenditures

AND

PRESENT CONDITION.

By HENRY V. POOR, Esq.,

Editor of the 'AMERICAN RAILROAD JOURNAL.

Illustrated by large and elegant Maps.

THIS work, which is the first of its description ever issued, and which traces the history of AMERICAN RAILROADS AND CANALS through their varying fortunes from the earliest period to the present day, has been written under peculiarly favorable circumstances, whether in relation to editorial experience, or the possession of the material necessary for the proper illustration of the subject, and on these accounts claims a reliability as to facts and deductions which under other auspices could not have been obtained. It is based principally on official reports published from year to year, and which for the past THIRTY YEARS have been accumulating in the office of the AMERICAN RAILROAD JOURNAL. To collate these, and present the essential facts relating to each enterprise, has required patient research and persistent labor. The result has been more successful than could have been anticipated under any circumstances—the general history, the progress of construction, the financial movements and the business operations of every road and canal in the United States being given in detail, the aggregate of all summed up and the averages deduced. The present condition of each work is elaborately set forth in full descriptions of property, share capital, bonds and other evidences of debt, etc., etc.; and the several departments of the subject are so carefully classified and arranged that comparison is rendered easy. The publishers, indeed, have no hesitation in presenting the work to all interested in internal improvements as complete and accurate in every respect—one that in reviewing the past lays the foundation for the future, and which is indispensable alike to the merchant, the banker, the contractor, and indeed to all who invest capital in railroads or canals.

The work will consist of THREE volumes royal 8vo, and be illustrated with a series of large **MAPS** specially drawn to accompany these volumes.

The **first** volume, embracing the States of MAINE, NEW HAMPSHIRE, VERMONT, MASSACHUSETTS, RHODE ISLAND, CONNECTICUT, NEW YORK, NEW JERSEY, PENNSYLVANIA, DELAWARE and MARYLAND, **is now ready for delivery.**

The **second** and **third** volumes, the one embracing the WESTERN, and the other the SOUTHERN STATES, are now being prepared and will be issued at an early date.

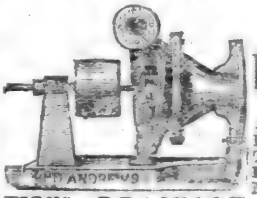
LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.			SHEET No		
1.	General Table for all Bases and all Slopes.		13. for Base 18 ft. Slop.		1½ to 1
2.	Possible Hill Cuts and Fills.		14. " 20 "		1½ to 1
3.	Base 12 ft. Slopes	1½ to 1	15. " 24 "		¾ to 1
4. "	14 " "	1½ to 1	16. " 25 "		1½ to 1
5. "	15 " "	¾ to 1	17. " 26 "		1½ to 1
6. "	15 " "	1 to 1	18. " 28 "		¾ to 1
7. "	15 " "	1½ to 1	19. " 30 "		1 to 1
8. "	16 " "	¾ to 1	20. " 30 "		1½ to 1
9 "	16 " "	1 to 1	21. " 32 "		1½ to 1
10. "	18 " "	½ to 1	22. " 32 "		1 to 1
11. "	18 " "	¾ to 1	24. " 32 "		1½ to 1
12. "	18 " "	1 to 1			

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eyesight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c. each;** or the whole, handsomely bound in cloth, in one volume, for **$7.50.**



ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows —

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

CEMENTS.

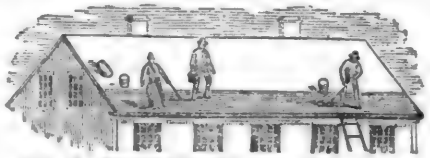
THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture ROSENDALE HYDRAULIC CEMENT of a superior and uniform quality and are constantly receiving it fresh from their Works at Rosendale. Particular attention paid to grinding fine, and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER, and MARBLE DUST, all of full weight and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of dry concrete and Underwater Works. Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the Works under Government.
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing 300 lbs. of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), at all seasons of the year thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, Hudson River Cement Company, Jersey City, N. J., or J. H. BUTTS, Secretary.
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.



WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We warrant it equal in every respect to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a superior article for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by DELAFIELD & BAXTER, 104 Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: HOFFMAN'S ROSENDALE CEMENT. This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freights obtained on the best terms.
E. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 43 Pine st., New York City.

New York State Canals.

(*From* POOR'S *History of Railroads and Canals.*)

The valleys of the Hudson and Mohawk rivers, being depressed below the general level of the country, were naturally seized upon by the earliest explorers and traders as the most convenient route between the interior and the Atlantic coast. The waters of the Mohawk took their rise in a plateau, which was also drained in parts by streams running into Lake Ontario. These waters so intermingled that in times of floods the Indian in his canoe could pass from one to the other. At these periods, a continuous water-line extended between Lake Ontario and the harbor of New York.

The progress of population westward suggested at an early day the improvement of this natural highway. In 1724, Cadwallader Colden, then surveyor general of the colony of New York, suggested a system of works somewhat similar to that now existing. In 1768, Sir Henry Moore, the governor of the colony, recommended to the legislature the improvement of its inland navigation as worthy of attention. Action upon these recommendations was necessarily postponed by the political troubles which soon followed. The idea, however, was not lost sight of, and in the midst of the revolutionary struggle, Gouverneur Morris predicted that, "at no distant day, the waters of the great western inland seas would, by the art of man, break through the barriers and mingle their waters with those of the Hudson,"—a prediction which in after life he aided to fulfil.

With the independence of the country, the project was renewed. No definite action was taken, however, till 1808, when the subject was presented to the attention of the legislature of the State, and a reconnoisance of the route proposed, which was subsequently ordered, and a sum of *six hundred dollars* voted to defray the expense. The survey was committed to James Geddes, who was instructed by Mr. De Witt, the surveyor general—first, to examine "what may appear the best place for a canal from Oneida Lake to Lake Ontario;" and next, "the ground between Lake Erie and Lake Ontario, with a view to determine what will be the most eligible track for a canal from below Niagara Falls to Lake Erie." The interior route was treated as a subordinate object, or only thought of "as a work by itself, to be undertaken hereafter, should government deem it necessary."

The Report of Mr. Geddes was made on the 12th of January, 1809, and though necessarily imperfect, by reason of the inadequate means voted for the survey, fully proved the practicability of the interior route, and the benefits it would secure to a fertile country that could be reached by no exterior route. No immediate legislative action followed, but the steps taken served to excite increased interest on the subject of the proposed improvements.

Before proceeding further with the historical sketch of the New York Canals, it will be proper to record the efforts already made by incorporated companies to open communications, by water, between the Hudson River, Lake Ontario and Lake Champlain.

On the 15th of February, 1791, a joint committee of the legislature was appointed to enquire into the means of removing the obstructions to the navigation of the Mohawk and Hudson rivers, and on its recommendation, an act was passed providing, among other things, for the survey of the ground between Wood Creek and the Mohawk River, and between the Hudson River and Wood Creek of Lake Champlain, and for estimates of the cost of constructing canals on the respective routes. An effort to make them State works was unsuccessful; and the report of the commissioners resulted in the incorporation, in 1792, of the Western and the Northern Inland Navigation companies—the one authorized to make a lock navigation from the Hudson to Lake Ontario, and the other a similar navigation from the Hudson to Lake Champlain.

In 1796, the Western Company surveyed a line for their proposed work, and soon after constructed a canal around Little Falls, one mile long, with 5 locks; another over the Genesee Flats, with 2 locks, and a third from the Mohawk to Wood Creek, running into Oneida Lake, with 2 locks and a feeder. Several dams and locks were constructed on Wood Creek. These works were completed in 1802, allowing the passage of boats of 15 tons burden from Oneida Lake to the Lower Mohawk, at a cost of $450,000. Toward these improvements the State contributed, as a stockholder, $92,000. From their limited capacity and imperfect construction, they proved unremunerative, their cost exceeding four times the estimates The company discouraged by the result suspended further operations.

The Northern Company did little or nothing toward the construction of the works assigned to it.

As the people of the State became more familiar with the country on the route now occupied by the Erie Canal, and as the need of such a work became greater with the increase of population, the subject was again brought to the attention of the Legislature; and on 1st March, 1810, a resolution was adopted by that body for the appointment of a commission to examine the route, the condition of the western navigation, the improvements expedient to be made, and to report in full to the Legislature at its next session their estimates and opinions thereon. The report was in favor of the interior route, and estimated the cost of a canal upon it at $5,000,000, and recommended that the enterprise should be offered to the general government. An act passed on 14th March, 1812, continued the commission, and authorized an application for aid to Congress and the Legislatures of the several States, and the appointment of engineers—appropriating $15,000 to the service.

The aid of Congress was refused. The report to this effect, made to the Legislature, in March, 1812, aroused the State pride, and a determination on the part of the people to rely on their own resources in the prosecution of the proposed works. It was followed by an act passed in June, authorizing the commissioners to borrow $5,000,000, in Europe, on the credit of the State. In consequence, however, of the hostilities which at that time were existing, no loan was effected, and in 1814 the act was repealed, and all proceedings relative to the canal suspended.

With the return of peace the project was revived. Public meetings were held to discuss the proposed works, and numerous petitions presented to the legislature in their favor. It was not, however, till 1816 that an act was passed which was the incipient step in the construction of the present system of public works. This act provided for the appointment of a board of commissioners, to examine the whole subject and report their doings to the succeeding Legislature. The duties imposed were faithfully discharged. The commissioners reported detailed surveys and estimates, laying the foundation for future action. On the 15th April, 1817, the act "concerning navigable communications between the Great Western and Northern Lakes and the Atlantic Ocean" was passed. It continued the commissioners previously appointed; established a canal fund; authorized the commencement of the work, by opening communications by canals and locks between the Mohawk and Seneca rivers, and between Lake Champlain and the Hudson, and empowered the commissioners to purchase the rights of the Western Inland Transportation Company, and to assess $250,000 upon lands on or within 25 miles of the route.

On the 27th June following the first contract was given out, and on the 14th July the ground for the Erie Canal was broken near Rome. The whole line was divided into three sections: the Western, extending from Lake Erie to the Seneca river; the middle, from that river to Utica, and the Eastern, from Utica to the Hudson. The middle section, including a branch from Syracuse to Onondaga Lake, was rendered navigable in October, 1819. In 1819 and 1820, 43 miles on the western section, chiefly on the east of the Genesee river; and in 1820, 26 miles on the eastern section were put under contract. Operations were conducted on both sections simultaneously. In the early part of 1821, the residue of the eastern, and that part of the western below the Genesee and Tonawanda Creek were let. In November of the same year, boats descended as far as the Little Falls on the Mohawk. Towards the close of 1822, boats navigated 220 miles of the canal; and in October, 1823, 280 miles were finished, and boats from the north and west entered the Hudson at Albany. On the 26th October, 1825, the first boat passed from Lake Erie to the Hudson. The period between the commencement and completion of this canal was eight years and three and a half months. The union of the waters was appropriately celebrated in the city of New York, on the 4th November, 1825.

The Champlain Canal was commenced in October, 1816; was navigable in November, 1819, and was finally completed in 1823.

In 1820, the State acquired by appraisement and purchase the rights and property of the Western Island Navigation Company, paying for them the sum of $151,821. The interest of the State as a stockholder, in this valuation, amounted to $60,205.

No sooner were the works which constitute the great feature of the system, the Erie and Champlain Canal, opened, than attention was directed to the improvements suggested to the wants and topographical features of the State. These were supplied by a number of lateral canals—the Oswego, reaching to Lake Ontario; the Black River, connecting the Erie Canal with the basin of the St. Lawrence; the Chanango, the Cayuga and Seneca, the Crooked Lake, and the Chemung Canaes, connecting it with the Susquehanna, and the Genesee Valley Canal, connecting it with the Alleghany river.

The dimensions of these several canals, as established by the commissioners in 1817, were 40 feet in width, 4 feet deep, with locks 90 feet by 15 feet. Their capacity was soon found to be inadequate to meet the wants of a growing commerce. So early as 1834, this had become apparent, and in his message to the Legislature at its opening in that year, Governor Marcy, after alluding to the rapid increase of the trade of the lakes and canals, said—"It has already, become quite evident that the capacity of the Erie Canal will not much longer be adequate to the exigency of the business on it. The improvements that will soon be required are double locks to facilitate the passage of boats, and the enlargement of the canal in its width and depth;" and on the 29th January, the Canal Commissioners made a special communication to the Assembly in favor of doubling the locks east of Syracuse, and rebuilding the acquednct at Rochester. In view of these demands, an act was passed in 1834 authorizing the Canal Commissioners "to construct a second set of lift locks, of such dimensions as they should deem proper, on the Erie Canal, from Albany to Syracuse." In the summer, preparations were made to carry this into effect; but at the session of 1835, the act of 1834 was repealed, and another act passed for enlarging the Erie Canal in its whole extent, and to re-construct the aqueduct aforesaid, with a 40-foot waterway. At this session were also passed the several acts authorizing the Black River, Genesee Valley and other canals.

In July, 1835, the Canal Board resolved, "That the canal be enlarged, so as to give 6 feet depth and 60 feet width of water on the surface, and that the locks be 105 feet long and 15 feet wide in the clear." At an adjourned meeting, held in the following October, it was voted to increase the depth of the canal to 7 feet; its with to 70 feet, and the locks to 18 by 110 feet. The estimated cost of the enlargement, to the extent proposed, with double locks (but not including land damages), was $12,416,150. Little was done toward the enlargement till 1837, when, $636,312 was expended. For the next five years, about $2,000,000 were annually expended, when the work was suspended by act of the Legislature, in 1842. In 1847, an act was passed for the resumption of the work of enlargement, under which it was resumed and has steadily progressed to the present time.

The total length of all the canal and river improvements, with their navigable feeders, belonging to the State on the 30th September, 1859, was 886 miles. In this length are included the unfinished works on the Black River, and on the extension of the Genesee Valley Canal.

There is no doubt that the Erie, the leading work in the system of the New York Canals, is by far the most important artificial highway in the United States, both in the extent of its present commerce and in the influence it has exerted in advancing the population, wealth and material interests of the country. Its opening, in fact, gave, for the first time, commercial value to the products of the Interior. According to a report made in 1817, to the Legislature of the State of New York, the cost of transporting a ton of merchandise from Buffalo to Albany equaled $100, a sum far exceeding the value, in New York, of most of the agricultural products of the country. The time required was 20 days. The canal at once reduced the cost from $100 to $20, and the time from 20 to 8 days. With the improvements on the canal, and the enlargement, the cost of movement has been steadily reduced, so that for the past year the average charge for transporting a ton of merchandise from Albany to Buffalo was $2.40 including tolls. The tabular statements accompanying this memoir, present in a condensed manner the progress, amount and value of the commerce of this great work.

Journal of Railroad Law.

ACTION TO RECOVER INTEREST ON RAILROAD STOCK; WHEN PAYABLE UNDER CERTAIN RESOLUTIONS.

The Vermont and Massachusetts Railroad Company was incorporated March 15, 1844, with a capital of 25,000 shares of one hundred dollars each. At the first meeting of the corporators and subscribers of stock, Nov. 21, 1844, it was voted, "that all subscribers be allowed interest on all sums paid by them up to the time when the road shall be completed and put in operation." On February 12, 1845, it was voted, "that the directors be authorized to deviate so far from the vote passed at the stockholders' meeting in November last, on the subject of allowance of interest to stockholders, as to arrange a convenient system for the treasurer, by which payments shall be made in uniform sums, and interest be allowed from uniform dates, not earlier than the first day of March next." On July 6th, 1847, the directors voted, that interest be paid to all holders of full paid stock on the first day of October next;" and interest was, accordingly, paid on ten thousand shares which had been fully paid in. Subsequently the company created new shares, of one hundred dollars each, one lot of which they put in the market at $75 per share, and the other lot at $50 per share; "the old and new stock to be of equal rank and value when fully paid, and the interest to be reckoned and adjusted accordingly thereon, and upon every assessment that may be paid." On the 12th of October, 1848, the directors voted "that the interest due to October 1st on stock be allowed to those who take new stock, and deducted on the payment of the second instalment, or paid in a bond of the company, at ninety per cent., to any stockholder who is willing to take it." By order of the directors, interest, on all shares of capital stock which had been issued prior to Sept. 5, 1848, and paid for, was made up to Oct. 1, 1848, and paid to the holders of such shares in cash, or by credit in payment for new stock. On April 10, 1849, the directors voted "that interest on the shares of this corporation shall cease after the 15th of the present month."

One Wright became the purchaser of 300 shares of the stock issued at 50 dollars per share; and interest from Oct. 1, 1848, to April 15, 1849, amounting to $975 not having been paid, he brought suit against the company for the amount, although the road had not been completed. The amount of interest on the shares held by the plaintiff and other stockholders, was cast up by the treasurer of the defendant corporation soon after the passage of the vote of April 10, 1849, and entered into a book procured by him for the purpose, setting against the name of each stockholder the number of his shares in one column, and the interest thereon in an other.

It will be perceived that by the resolution passed at the first meeting of the stockholders, interest was to be paid only "when the road shall be completed and put in operation." It was contended, however, on behalf of the plaintiff that the subsequent acts and resolves of the defendants bound them to pay interest without regard to the completion of the road; and that no vote to pay interest, before or after it was made up, was necessary. The defendants contended that no interest was due, or payable until the road was finished.

Judgment was recovered by the defendants in the Massachusetts Court of Common Pleas, from which an appeal was taken to the Supreme Court of Massachusetts. The following is the opinion of the appellate court affirming the judgment of the Common Pleas.

SHAW, CH., J.—This is an action brought by the plaintiff as a stockholder in the Vermont and Massachusetts Railroad Corporation, to recover several sums alleged to be due and payable to him from the corporation. The case comes before us upon an agreed statement of facts, and the claim is placed by the plaintiff on the votes of the stockholders.

Supposing the original vote of the stockholders should be regarded as declaring a general right of the stockholders, previously to paying in any instalments on their shares, that each should be entitled to interest, to be computed on his payments, from the time of each payment to the time when the railroad should go into operation, and be in condition to earn income and pay dividends; this would be equitable because it would put stockholders on an equal footing, whether they should pay earlier or later. It would encourage capitalists to advance their money early, to meet the exigences of the company before it could enjoy any income; and it seems right that the use of such capital should be paid for as a common charge on all. But a general declaration, and the adoption of an equitable arrangement, was indefinite in its nature, fixed no time or mode, in which such interest should be paid, and looked to no contingency on which it should be paid, other than the completion of the road.

Subsequently the directors passed a vote fixing the time of the first computation of interest to Sept. 1, 1847, probably with the expectation of issuing stock, and providing that these sums of interest should be received in payment therefor. Afterwards, the directors under the same authority fixed another time to which interest should be computed, being thirteen months from the former payment of interest, to be paid by receiving it on instalments on new stock, or the bonds of the company at ninety per cent. at the option of the stockholders. But there was no provision for the payment in money. These were paid accordingly. The directors never fixed any time for the third payment of interest. The directors voted April 10th, 1849, that no interest should accrue or be payable after April 15th; and thus fixed, as far as they had authority to do it, the time to stop the running or accruing of interest; but they did not fix a time for the payment of interest or direct the manner; whether by cash, bond, scrip or otherwise. Taking the legal obligation of the company to pay interest, on the ground on which the plaintiff places it, interest was not payable annually, or at any other period; because the vote did not so provide. We think there was no implied promise to pay interest annually, even if such promise might be implied from undertaking to pay money at a distant day, with interest in the meantime, because here was no debt, no principal sum to be paid. The directors have put no practical construction upon the votes, by paying annually, because the first and second payments were not an interval of a year, but of thirteen months; and, besides, the list payment was not to be made in money. Further, if anything made it an annual payment of interest, this action commenced July 3, 1849, was premature, being within a year from the former time of payment. In any way in which we consider it, the plaintiff had no cause of action when this suit was brought.

The book made by the Treasurer, stating how much would be due to each on the 15th of April, on which some reliance was placed, does not appear to have been made in pursuance of any order of either stockholders or directors. It was a blank book prepared by the clerk, to be signed by the stockholders, if any vote should pass under which they should receive their pay. No such vote ever did pass. It is of no authority as evidence. Great stress was laid by the plaintiff on the vote of the directors of April 10, 1849, stopping all interest after April 15, though it was denied on the other side that the directors had any authority to pass such a vote. No doubt this time was fixed as the time for stopping the payment of interest to stockholders because that was the time fixed for payment of the last instalment on the third issue of stock. As no more advances could be made, it was probably considered that, whether every stockholder should receive interest on what he had paid, or no one should receive any, it would really make no difference, because each would be bound to pay in the same proportion in which he would be entitled to receive. But whatever might be the authority of that vote, on the grounds on which its validity is questioned, we cannot put the construction upon it, that it directed the interest to be paid up to that time in cash and on demand; no such construction is warranted by its terms, or by any previous vote;

and we think it would be a forced and untenable one.

The Court are, therefore, of opinion, that whether that vote was unauthorized and void, or valid and effectual for the purposes for which it was intended, it was not a vote giving a present debt to the stockholder, and a right to maintain an action to recover it, and therefore, that this action cannot be maintained.

LENGTH OF ROAD.

Authorized: Richmond to Covington..206 miles.
Completed: Richm'd to Jackson's River.195 "
Second Track, none. Sidings and turnouts 16.5 "

This length (195 miles) includes the Blue Ridge Railroad (16.81 miles) constructed by the State and operated, under contract, by the Virginia Central Railroad Company.

ROLLING STOCK—Locomotive engines 27
Cars (8-wheel) :—Passenger, 1st class 13, and 2d class, 7..... 20
Cars (8-wheel) :—Conductors' 3; baggage, express and mail 8; covered freight and cattle 143; open, and platform, and gondola 30; hay 4 188
Cars (4-wheel):—Freight 10, and gravel 22. 32—240

The *Virginia Central Railroad Company* was chartered under the title of the Louisa Railroad Company, on the 26th February, 1836, with a capital of $300,000, and with authority to construct a railroad "from some point on the line of the Richmond, Fredericksburg and Potomac Railroad, in the neighborhood of Taylorsville, to a point in the county of Orange, near the base of the southwest mountains." On the 27th February, 1837, an act was passed authorizing the Board of Public Works to subscribe, on behalf of the State, $120,000 to the company's capital, or two-fifths of the whole amount. The work of construction was soon afterwards commenced, and the road completed and opened for public use, from the Junction (23 miles north of Richmond) to Fredericksball, 23.33 miles, on the 30th December, 1837, and to Louisa Court House, 35.29 miles, on the 28th December, 1838. The cost of the work to this date was $405,225, or $11,500 per mile. This amount was exclusive of rolling stock, which was provided by the Richmond, Fredericksburg and Potomac Company, under a contract for operating the road.

By an act passed on the 27th March, 1838, the company was authorized to extend the road from Louisa to Charlottesville, and to increase the capital by $300,000, three-fifths of which to be subscribed by the State. The first portion of the Extension, from Louisa to Trevillian's Tavern, 4.32 miles was completed on the 1st August, 1839, and thence to Gordonsville, 9.55 miles, on the 1st January, 1840. This was the western terminus of the road for the next seven or eight years.

In June, 1845, a resolution was adopted by the stockholders, asking for authority to extend the road to the Blue Ridge. The application was at first unsuccessful; but at the following session of the legislature an act was passed (8th March, 1847,) for this purpose. An independent railroad from the Junction to Richmond was authorized by an act passed on the 24th March, 1848. The latter was projected on account of the inability of the company to conclude a satisfactory arrangement for the continuance of the use of the Richmond, Fredericksburg and Potomac Railroad between the two points. Both these works were put under contract shortly afterwards.

For the construction of the Western Extension the company was authorized to increase its capital by $300,000, the State to take two-fifths of the amount. To this date a considerable amount of the net earnings had been diverted and applied to construction. As a compensation to the stockholders these, in 1848, were distributed as an extra dividend of ten per cent. to the old stockholders, bonds payable in 1852 and bearing 6 per cent. interest, being issued therefor. The first portion of the Western Extension, from Gordonsville to Cobham, 6.83 miles, was completed and opened for traffic on the 14th August, 1848; thence to Rogers' Mills, 6.85 miles, on the 19th December, 1848; thence to Shadwell, 4.18 miles, on the 20th March, 1849, and thence to Charlottesville, 3.05 miles, on the 31st May, 1850.

In March, 1849, an act was passed authorizing the construction of a railroad, including a tunnel, across the Blue Ridge, at the expense of the commonwealth, and with the view of connecting with the Louisa Railroad. The act required the acceptance of its provisions by this company, and that the latter should pay into the State treasury fifty cents for each passenger and ten cents for each barrel of flour transported through the tunnel, the company to operate the road and keep it in thorough repair at its own cost. The measure was duly accepted by the stockholders, at their annual meeting, in July of the same year.

Another act was passed at the session of 1849, which authorized the company to issue bonds to an amount not to exceed $80,000, the proceeds to be applied to the construction of the Richmond Extension. By the terms of the contract for this work, payment was to be made in bonds, stock and cash, in equal amounts. The bonds were made payable in 10 years, and bearing 6 per cent. interest.

The name of the company was changed in 1850, and from this date the history of the Virginia Central Railroad properly begins. The length of line now in operation was 70.07 miles, extending from the Junction to Charlottesville; and extensions were in progress at both ends, towards the Blue Ridge on the west, and towards Richmond on the east. In the course of this year (1850) that part of the line between Waynesboro' and Staunton was also put under contract.

On the 1st January, 1851, the Richmond Extension of the road was completed at a cost of $251,406. From the first opening of the Louisa road, in December, 1837, to the 1st July, 1847, it had been operated, under contract, by the Richmond, Fredericksburg and Potomac Company, at first for half the gross receipts from freight and mails and one-third the gross passenger receipts, and for the last three and half years of the period for two-fifths of the total gross receipts, the Louisa Company keeping the road in repair. From the 1st July, 1847, the company conducted its own transportation, paying tolls to the Richmond, Fredericksburg and Potomac Company for the use of its road into Richmond.

In the latter part of 1851, arrangements were made for extending the road from Staunton west to Covington. About the same time it was resolved to re-lay the road between the Junction and Gordonsville with heavy iron. This work of reconstruction was continued through 1852 and completed in the following year. Part of the cost was met by an issue of coupon bonds. The road from the Junction to Richmond, and from Gordonsville to Charlottesville, has also been re-laid with heavy rail.

The Western Extension of the road was opened from Charlottesville to Woodville, between 7 and 8 miles, on the 15th March, 1852, and to Mechum's River, 107 miles from Richmond, on the 6th December of the same year. Between this point and Waynesboro' the Blue Ridge Railroad, 16.81 miles long, intervenes. The work west of the mountains was in rapid progress, and the section of the road between Waynesboro' and Staunton, about 12 miles, was completed by the 1st July, 1853. The Blue Ridge Railroad was also completed, except the tunnel works. The slow progress at the latter induced the company to construct a temporary track over a depression of the ridge, called the Rock Fish Gap. This was completed on the 1st April, 1854; and thus a continuous line of railroad from Richmond to Staunton, 138 miles in length, was opened for traffic.

At the annual meeting in July, 1853, it was proposed to construct a direct line from Richmond to Charlottesville, and a charter for such road was granted on application to the legislature, on the 19th January, 1854. This line will have a length of about 70 miles, and save a distance, in comparison with the present route, of 27 miles. Nothing has yet been done towards its construction further than a preliminary survey having been made.

In April, 1855, the road was extended from Staunton to Goshen, 32.50 miles, and in July, 1856, to Millboro', 39.25 miles. At this period the whole remainder of the line to Covington was under contract and in rapid progress. The company, however, had been disappointed in receiving that aid from the legislature that had been expected, and in consequence was obliged to suspend further operations on the 10 miles next to Covington, and confine its labors to that section between Millboro' and Jackson's River, embracing the heaviest work on the whole line. This was completed and opened for traffic on the 10th July, 1857, the high grades immediately west of Millboro' being overcome by a temporary track similar to that at the Blue Ridge.

The Blue Ridge Tunnel was completed and brought into use on the 13th April, 1858, and the temporary track through Rock Fish Gap abandoned. This mountain track had grades varying from 238 to 295 feet to the mile, and frequent curves of 300 feet. The temporary track wes of Millboro' has grades of 308 feet, with similarly abrupt curves. This also will be abandoned on the completion of the tunnel at that point.

Nothing has been done on the suspended work beyond Jackson's River since the 6th April, 1856.

The company has decided not to resume operations until there is a prospect of having a portion of the Covington and Ohio Railroad (now being constructed by the State) opened for use.

On the delivery of the Blue Ridge Railroad and Tunnel, the works were found to be in an unfinished condition, and required essential improvements. By agreement with the Board of Public Works the company has undertaken their completion, the State binding itself to repay the necessary outlay from the tolls collected. In pursuance of this arrangement the tunnel and road are now being perfected.

In 1859, the Orange and Alexandria Company concluded a contract with this company for the use of its road between Gordonsville and Charlottesville. This forms a connection between the two divisions of the Orange and Alexandria Railroad, and obviates the necessity of constructing an independent road parallel to the existing line. The compensation for the use of the road is 62 per cent. of the earnings from freight and passengers passing over the connecting line, charged according to the current rates.

Exclusive of about four miles next to Covington, the length of the Virginia Central Railroad is 184.87 miles. In this distance the sum of ascents westward is 3,803 feet, and eastward 3,848 feet, making a total of 7,251 feet, or 35.9 feet to the mile. The maximum grade going west is 83 feet far 1.5 mile, and going east 72 feet per mile for 14.08 miles. The alignment shows 107.76 miles straight and 77.11 miles curved—the total curvature being 10,651.78 degress, averaging per mile on the curved part 1,381.87, and on the whole road 500.76 degrees. Maximum radius 19,100 feet, and minimum radius 716 feet for 0.22 mile. The structures on the line are—bridges 33, viz: wood 27 (spans 42, length 3,020 feet) stone or brick 3 (spans 8, length 166 feet), and iron 3; culverts 591, viz: box 472 and arched 119; buildings 171, viz: passenger houses 10, freight depots 28, repair shops 6, water stations 28, engine houses 8, wood sheds 17, dwellings 35, turn-tables 12, houses for section hands 25, cor houses 2. Rails, length 20 to 22 feet, weighing from 50 to 57 and 60 pounds, all T, except on 19 miles, which are laid with U pattern. On the sidings the rails is of mixed shapes and various sizes. Cross-ties 2,400 to mile, and of cypress, white oak, pine and chestnut, 6 by 8 inches, and 8 feet long; gauge of track 4 feet 8½ inches; chairs of wrought iron, weighing 7 lbs., 528 to mile. Crossings 250, viz: farm 230, road 4, street 8, and railroad 1; cattle guards 363; switches 118.

Share Capital.

Authorized, $3,400,000, in 34,000 $100 shares.
Paid in, $3,182,445, on 31,537 "
By the State—Sub..$1,878,493; paid in, $1,878,493
By others— " $1,275,200; " $1,258,952

Funded Debt—$1,485,346: classified as follows—

1st Mortgage, 6 per cent. coupon bonds...$100,000—issued in February, 1850, and payable, principal: $70,000 in April and $30,000 in July, 1880, and coupons semi-annually, 1st January and 1st July, in the city of Richmond. These bonds are guaranteed by the State.

2d Mortgage, 5 per cent. coupon bonds...$206,000—issued in October, 1852, and payable, principal in January, 1872, and coupons semi-annually, 1st January and 1st July, in Richmond and New York.

3d Mortgage, 6 per cent. coupon bonds ..$941,000—issued in April, 1854, and payable, principal in July, 1884, and interest semi-annually, 1st January and 1st July, in Richmond and New York.

Dividend, 6 per cent. bonds.....$74,964—issued 1st October, 1851, and payable, principal 1st October, 1866, and interest semi-annually, 1st April and 1st October, in the city of Richmond.

Dividend. 6 per cent. bonds.....$93,850—issued 15th October, 1853, and payable, principal 15th October, 1875, and interest semi-annually, 15th May and 15th November, in the city of Richmond.

Dividend, 6 per cent. bonds.....$70,062—issued 1st July, 1855, and payable, principal in 10 years, and interest semi-annually, 1st January and 1st July, in the city of Richmond.

Sinking Fund.—This fund, which is applicable for the cancellation of the whole funded debt, was commenced on the 1st July, 1858. $20,000 is transferred from the net earnings annually, and placed to the credit of the fund. In 1864 an additional annual contribution of $25,000 is to be made. On the 1st October, 1859, bonds to the amount of $42,500 had been redeemed and cancelled, viz: $500 of the mortgage bonds of 1851–72, and $42,000 of the mortgage bonds of 1854–84. This fund, if uninterrupted in its operations, will pay the whole debt at maturity.

To 1847 the receipts are the share received by this company from the Richmond, Fredericksburg and Potomac Company: the expenditures are for repairs.

The mileage, after 1853 includes that of the Blue Ridge Railroad, 18.61 miles, which is not included in "Cost of Road," etc.

Debt, Wealth and Population of St. Louis.

We abstract from the report of Stephen Hoyt, Esq., the Controller of the City Treasury, the material portions thereof relative to the population, wealth, taxation, etc., of the city, and the debt incurred for municipal and other purposes.

INCOME AND EXPENDITURES.

The total receipts into the treasury from all sources during the year have amounted to $831,530, or including the balance in the treasury from former years $920,658. The expenditures for the same period have been $829,501. Excess of resources remaining in treasury $91,157.

BONDED DEBT.

The bonded debt of the city of St. Louis on the 1st day of October, 1860, was $5,006,700

And was issued for the following purposes, to wit:

For railroads	$1,634,000	
" past indebtedness	711,500	
" gen'l municipal purp's.	525,700	
" water works	490,000	
" purchase of real estate.	437,000	
" public sewers	425,000	
" old limit improvem'ts.	259,000	
" harbor	247,000	
" wharf	166,000	
" district sewers	111,500	$5,006,700

No bonds of any kind have been issued during the present fiscal year. The question of a further increase of the bonded debt is an important one, and has to be met and looked straight in the face.

In my judgment, no more bonds should be issued for municipal purposes.

In the construction of works of permanent improvements, such as for furnishing the people with pure air, water, and light, posterity, perhaps, should in justice bear the burden. Hence the propriety of the city loaning, as a corporation, her credit for the purpose of building public sewers, increasing the capacity and usefulness of the waterworks, and for furnishing gas to consumers at cost price. This, with a clear understanding, the bonds and interest on bonds so issued, when due, are to be paid out of the receipts from the works so constructed. These conditions would insure the sale of the bonds at par, and would render them as good securities as are offered.

Our bonded debt in April, 1858, was	$5,207,000
Our floating " " "	300,000
	$5,507,000
Our bon'd debt in Oct. 1, is	$5,006,700
Our float'g " "	10,000
	5,016,700

Decr. of publ'c d't in two and a half years. $490,300

The outstanding bonded debt will become due in the following fiscal years:

1860	$57,000	1876	$100,000
1861	126,000	1877	246,000
1862	41,500	1878	240,000
1863	14,000	1879	176,000
1864	75,000	1880	402,000
1865	165,000	1881	50,000
1867	170,000	1882	229,000
1870	476,000	1883	155,000
1871	295,000	1885	15,000
1872	874,000	1887	42,000
1873	604,000	1888	59,000
1874	380,000	1890	25,000
1875	440,000	1895	50,000
Total			$5,006,700

The following bonds will become due during the remainder of the present fiscal year:

November	22,	5	Sewer bonds	$5,000
do	23,	10	do do	10,000
December	28,	10	do do	10,000
do	25,	8	Harbor do	8,000
January	3,	16	Sewer do	16,000
February	4,	5	do do	5,000
April	1,	3	do do	3,000
57 bonds, amounting to				$57,000

TEMPORARY LOANS.

Under ordinance No. 4,661, giving power to the mayor and controller to borrow money in anticipation of receipts of revenue from taxes; there were negotiated in St. Louis, seventy-five thousand dollars, and in New York and Boston, one hundred and seventy-five thousand dollars, at the rate of six per cent. per annum interest, all of which has been paid, so that the city owes nothing in the shape of temporary loans, and has sufficient funds in New York to meet the maturing interest of the present month.

The amount of the unpaid bills in the auditor's office on the 1st inst., was $9,522 75.

TAXATION.

From an examination of the books of the assessor, it appears that the value of property, real and personal, amounts to $102,408,280, the tax on which is

For general purposes	$806,875 40
" sewer tax	102,408 19
" harbor tax	51,204 12
" poll tax	2,531 50
Total	$1,033,019 01

To which might be added the value of property exempt from taxation, amounting to $7,031,807, the tax on which, if assessible, would be $73,-

498 98; which would make an aggregate of property amounting to $109,440,037, and give a tax of $1,106,498.

POPULATION, TAXATION AND REVENUE AND THE RATIO OF INCREASE OF EACH.

	Population.	Value of Property.	Revenue.	Per cent. increase of population.	Per cent. increase of property.	Do. of property.
1810.	1,400	$134,516	....	...	...	...
1820.	4,928	1,024,440	$4,165	252	662	...
1830.	5,852	1,830,616	14,212	19	78	243
1840.	16,469	8,573,662	119,174	181	368	734
1850.	74,439	29,676,649	433,036	352	246	264
1860.	162,179	102,408,230	1,553,356	115	245	235

From the above statement it will be seen that the city of St. Louis, by a careful and reliable census just completed, has a population of 162,179, which establishes the fact that this is the "Empress" city of the great central valley of the American Republic, to which she justly holds the keys of trade. The statement also shows that St. Louis has regularly and rapidly increased in all the constituent elements of a permanent prosperity, from the time she became a city until now, and judging from the past there can be no doubt of her future. St. Louis has heretofore relied mainly upon commerce for her acquisitions; but now that she is to become a manufacturing city by virtue of her geographical position, and possessing more natural advantages for manufacturing than any other city of the Union, may we not anticipate, with confidence, a population of 400,000 in 1870, with a valuation of property of $300,000,000.

Railroad Route from Lexington to Knoxville.

A correspondent in Kentucky furnishes us with the following data in relation to a railroad from Lexington to Knoxville. The route advocated is as follows. Leaving Lexington the Kentucky River is crossed direct towards Richmond in Madison county, passing about one mile west of Richmond, at the glade near the head of Silver Creek. Thus far, about 30 miles, our correspondent states, will be encountered the heaviest grading upon the whole route; the country, however, he describes as among the oldest settlements, and, part of it, the wealthiest in the State.

Up Silver Creek, and thence down Round Stone Creek, is describe as an almost level plain 25 to 30 miles, requiring but one cut of over 15 feet. Then crossing Big Rockcastle River, the route lies up the Little Rockcastle to its head. Our informant understands that the face of the country is favorable for a railroad to the Tennessee line.

By reference to the map of Kentucky we find this route to follow the Charleston Air Line from Lexington to Richmond, thence diverging a few degrees to the westward, through the level country along Silver and Round Stone creeks, as described by our correspondent, intersecting the Danville and Knoxville line near Mount Vernon, in Rockcastle county; thence to Knoxville we have heretofore described in speaking of that route.

The mountains lying to the east of the line are described as abounding in mineral wealth, containing coal veins of from three to 15 feet in thickness, well watered and timbered, and affording inexhaustible supplies of salt and iron ore. The cultivated lands produce large crops of corn, wheat and potatoes, and finer fruit than is grown west of New Jersey.

Our correspondent thinks the local business alone would make a paying investment equal to any in the Union, if the road were built through the country he describes. He informs us that Madison county has already voted a stock subscription of $300,000, which it is able to pay without selling bonds. He thinks the other counties through which the road would pass, viz: Fayette, Rockcastle, Laurell, Knox and Whitely, would vote largely to assist in the work, if the Company were at once organized and under the lead of an energetic President, and the importance of the enterprise properly laid before the people of those counties. Garrard county, he also thinks would assist, to some extent, as the road would pass for some distance near the line bordering upon Madison.

We are also informed, from the same source, that a survey of this route, made by Messrs. McKay and Fremont, is now presumed to be in Charleston, South Carolina. Mr. McKay is now dead; his coadjutor is Col. J. C. Fremont, now of California.

We have given the above data, as presented by our informant, with the view of placing it on record, with that already presented in our columns, in relation to the other proposed routes for a Southern railroad. The committee now having the matter in charge, will doubtless at as early a day as may be practicable, present the whole subject in proper form before our community, with reliable information derived from a minute inspection of the various routes and plans for the prosecution of this most important work.—*Cincinnati Commercial.*

Nashville and North-Western Railroad.

The Nashville *Union* of the 14th inst. gives the following account of the progress of the Western division of this road to Nesham's, in the Harpeth Valley. When completed it will connect Hickman on the Mississippi, with Nashville.

The road has now been completed, and the cars are making regular trips seventeen miles out from Nashville. It is one of the best and smoothest roads upon which we ever traveled, the work having been done in the most substantial manner. It will compare in this respect with the best roads in the country. The work of track-laying is being pushed forward by M. F. Manning, Esq., the contractor, with all possible speed, and the remaining eight miles ready to receive the iron will be put in running order in the course of two or three weeks.

From the Tennessee river the work of grading is progressing rapidly in this direction, and in a few days eighteen miles will be ready to receive the iron, and track-laying will soon be commenced at the Tennessee river. It is the intention of the Company to have the work of track-laying progressing from both ends, until the whole section between Nashville and the Tennessee river (seventy-eight miles) is completed.

On the western end the cars are running to some point near Huntingdon, and will reach that place in a few days. From Huntingdon to the Tennessee river the work of grading is being pushed forward with as much dispatch as indomitable energy can bring to bear. The directors confidently expect to have the whole road graded and ironed by the 1st of November, 1861. The only break then will be the Tennessee river bridge, and that they expect to have completed by the 1st of January, 1862.

When the road is fully completed, it will be stocked with new engines and passenger cars of the latest and most approved style, looking to speed and safety.

The Shelbyville Railroad.

Notwithstanding the city of Louisville recently consented to loan this road $120,000 towards its completion, the Directory on Friday last, at their meeting in Shelby, resolved not to put the road under contract until $25,000 additional should be raised. The president reported that $225,000 had been received by subscription and negotiation, which added to the unexpended old subscription of $40,000, makes a total of 295,000. The Surveyor reports that the completion of the road will, with the rolling stock, cost the latter sum, and in this estimate nothing is allowed for depot grounds and buildings, water stations, engineering expenses and pay of officers. The Directory do not therefore, propose to go on with the work until $25,000 additional be raised, and a call will immediately be made upon the stockholders and friends of the road to come forward and subscribe the necessary amount.—*Cincinnati Enquirer, Oct.* 19.

Southern Railroad Extension.

We take pleasure in heralding the onward progress of the Southern Railroad. On Monday, the 1st of October, the road was regularly opened for transportation of passengers and freight between Vicksburg and Newton. The fiery steamhorse will inaugurate a new era for east Mississippi. Many thousands of acres of fertile land in that section that have heretofore been worthless because they were inaccessible, will now be speedily brought into profitable cultivation.—*Vicksburg Whig.*

Glassboro' and Millville Railroad.

This railroad extends from Glassboro' to Millville, two flourishing villages in Southern New Jersey, a distance of 22.3 miles. It forms a section of the West Jersey Railroad, which, when completed, will extend from Camden opposite Philadelphia to Cape May and have a total length of 77 miles. From Glassboro' to Camden is 18 miles of which one half the length is completed and in operation, namely from Camden to Woodbury, and the other half in rapid progress. The 27 miles extending from Millville to Cape May are not yet commenced. The Glassboro' and Millville line has been constructed at a cost of $161,353. This is a remarkably cheap work, having been build on the cash principle, and it is the highest praise we can profer to the Engineer in charge, that he has sought to economize his expenditures rather than blunder himself into costly magnificence. The road, indeed, is all that is needed for the exigincies of the country, and since it is known that railroads in level districts may be constructed almost as cheaply as turnpikes, we hope to see a few more opened for the convenience of the many flourishing neighborhoods, which are yet dependent on the ordinary means of communication for a market. The final account of the cost of the road as made up by Geo. B. Roberts, Esq., the company's engineer to the 1st October, 1860, is as follows:

Graduation and masonry		$29,376 31
Superstructure		115,755 61
Depots, fuel, sheds, etc		2,144 62
Right of way paid, about		4,500 00
Engineering		6,576 85
Total amount paid to date		$158,353 39
Add for balance of right of way (not paid)	$2,000	
Add for depots not finished	1,000	—3,000 00
Total cost of road exclusive of equip't.		$161,353 39
Equipment account to date	$12,512 70	
Amount to complete equipt	11,285 00	
Total cost of equipment (paid & estim'd)		23,797 70
Add for sundry expen. at Mill.	$1,848 91	
Less earn's of r'd to date, abo't.	1,000 00	— 848 91
Total cost of entre improvement		$186,000

"It is seldom," says Mr. Roberts, "that a road is completed for less than the engineer's estimate especially when that estimate is a low one. It is therefore as much a matter of satisfaction to myself, as it must be to all who have had to furnish the means to construct the road, to find that in no single item has the original estimate been exceeded; and I venture to say that there is not to be found in this country as many miles of as well constructed railroad as your company have for the

same cost to wit: 22.3 miles of main line and 0.75 mile of siding, in all 23.05 miles, costing $161,353 or about $7,000 per mile including all expenditures." The ultimate expenditures for equipment will not exceed $25,000.

New York and Harlem Railroad.

We publish the following communication from the President of the Harlem Railroad Company in reference to its present condition.

NEW YORK AND HARLEM R. R. Co., PRESIDENT'S OFFICE, NEW YORK, Oct. 23, 1860.

Some remarks having been made, in the financial columns of an evening paper, in disparagement of the Albany Express trains just placed upon the Harlem Railroad, I deem it proper to make a brief statement on the subject.

When the present Board of Directors took charge of the Harlem Company, more than three years ago, they found it very much embarrassed, and the road and rolling stock quite out of repair. After funding the floating debt, which had borne most oppressively upon the company, all efforts were directed to the improvement of the road and equipment, and this has been kept steadily in view for the past three years. It has necessarily been a work of time, as the means have been appropriated from the earnings of the road, in order that no new debt should be created. Extensive repairs and renewals have been made, especially within the past year, during which time a large amount of new iron, ties, and ballasting, have been placed in the track, and the cars rebuilt and refurnished. It gives me pleasure to say that the bridges, track, and cars, are now in most excellent condition, that they will compare favorably with the best roads of the country.

The Harlem is the oldest route between New York and Albany, and it has never been the policy of the company to relinquish their share of the great through travel to and from the West. The arrangement made with the Hudson River Company some years since has proved disadvantageous, by withdrawing the line from public notice, and it will take a short time to re-establish it. We shall now operate under more favorable auspices than formerly, having connections with the N. Y. Central and all western lines, by which passengers are ticketed and baggage checked through—a thing which has never before been done since the Harlem Railroad was opened.

With many advantages to commend it, there is no reason why a road like the Harlem should not command its full proportion of the business. It is comparatively free from curves; the grades are no higher than those of the New York Central; there are very few bridges; the road bed is firm, and free from dust, yet not too rigid; and there is very little noise, which is so painful to many persons. The road is favorably located along the very centre of New York Island while north of Harlem River it passes through one of the most charming and picturesque portions of the State. The public appreciate these advantages, and when the line shall become well known and permanently established, I have no doubt that it will command and retain at least one-half the travel.

It has been intimated that this is the commencement of a war upon a vital route. Nothing of the kind is intended, as we have clearly proved by advancing instead of reducing our rates. Our effort to make the fullest possible use of the road, and to earn some money for the stockholders, cannot surely be construed into a warfare or unjust competition.

As to the success of the new trains, it would be premature to express an opinion two or three days after there commencement, as has been done in the comments above alluded to. I am well aware that the current of travel cannot be immediately changed, and I had no expectation that it would be very considerable for the first few days, or even weeks; but I feel perfectly satisfied that when the route becomes more generally known the travel will increase, and continue to do so until our full and equal share shall have been reached.

The express trains have now been running just one week, and the number of passengers is every day increasing. They have not been commenced without due consideration, and the true interest of the Company will be consulted by continuing them for the future as a permanent and fixed arrangement.

I take this occasion to add that the condition of the Harlem Company is steadily improving, and that there is a strong promise of prosperity in the future.

ALLAN CAMPBELL, President.

Railroad Earnings.

The following are the earnings of the Great Western Railway of Canada for the week ending October 12, 1860:

Passengers	$26,109 45
Freight and live stock	28,594 59
Mails and sundries	1,376 05
Total	$56,080 09
Corresponding week of last year	48,327 98
Increase	$7,752 11

Statement of the earnings and expenses of the Watertown and Rome Railroad for the month of September in 1859 and 1860:

EARNINGS.	1859.	1860.
From Passengers	$15,867 42	$14,683 70
" Freight	13,414 98	19,684 58
" Mails, etc.	932 58	1,917 28
Total	$35,214 98	$36,185 46
EXPENSES.		
Maintaining road	$9,434 66	$2,729 94
Repairs of machinery	1,538 50	1,456 78
Operating road	8,219 14	6,182 24
Overcharges refunded	3 99	40 39
Total	$19,196 29	$10,409 35
Net	16,018 69	25,776 11

The following statement shows the business of the Reading Railroad during the month of September, 1860, compared with the same month of 1859:

	1860.	1859.
Received from coal	$248,487 06	$189,729 20
Do. merchandise.	51,607 06	38,467 06
Do. travel, etc.	39,817 14	36,425 71
	$339,911 23	$264,621 97
Transportation, roadway, dumpage, renewal Fund, and all charges	139,758 32	134,167 93
Net profit for the m'th.	$200,152 91	$130,454 04
Do. for previous 9mos.	1,069,628 91	850,568 15
Total net profit for 10 months	$1,269,781 10	$981,022 19

The August report of the Receiver of the Central Ohio Railroad is as follows:

RECEIPTS.	1859.	1860.
Passengers	$22,380 61	$23,473 18
Freight	32,744 81	35,874 07
Express	717 29	1,297 04
Mail	2,378 70	2,378 70
Total	$58,231 41	$63,022 99
EXPENSES.		
Transportation Depart't.	$14,476 75	$8,750 60
Machinery Department.	11,825 20	9,494 45
Road "	10,636 55	10,954 38
General expenses	2,824 37	1,445 92
Construction	2,341 75	2,309 54
Fuel	--	5,793 24
Total	$42,104 62	$38,748 13

The increase in the receipts over August, 1859, is $4,791 58, and the decrease in the total expenses $3,356 49.

The earnings of the Central Railroad Company of New Jersey, for Sept., 1860, were, $107,043 97
For the same month last year 89,846 28
Increase, 19 per cent. $17,197 69

The receipts of the Grand Trunk Railway of Canada for the week ending October 13th, 1860, was $80,914 75
Corresponding week last year 60,032 46
Increase $20,882 29

Total traffic from July 1, 1860, to date. $964,063 89
Corresponding period, 1859 713,870 50
Increase $250,193 39

Memphis and Louisville Railroad.

The grading on the Memphis, Clarksville and Louisville railroad, is now so nearly completed that they are receiving the iron rails, chairs, and spikes to commence the track-laying immediately at Paris, in the direction of Clarkesville, from which place the connection is made complete to Louisville. Between Paris and Clarkeville, the same road is now in running order, only a gap of about twenty-eight miles to be completed in the whole route. The road will be completed this winter, from Memphis to Louisville, and will be the best paying route in the Union.—*Paris Sentinel.*

Mississippi and Missouri River Railroad.

This road is being rapidly pushed forward. The main stem is now finished and in running order to Marengo, ninety miles west of Davenport, and the south-west branch to Washington, fifty-five miles west of the Mississippi, giving the company one hundred and forty-five miles already completed. Twenty miles additional of the main stem will be completed the present year. Next year the Washington branch will probably be pushed forward to Oskaloosa. The company have a land grant of between five and six hundred thousand acres.—*Cincinnati Enquirer.*

Wisconsin Farm Mortgages

Mr. C. T. Cromwell, of New York, now here on his way from the interior of Wisconsin, has settled some $12,000 farm mortgages on the Milwaukee and Mississippi road, on a deduction of from five to ten per cent. from principal and compound interest.—*Chicago Press and Tribune.*

Wisconsin Bonds.

The Supreme Court of Wisconsin has decided that the "city of Madison, before the publication of its charter, issued certain bonds, and subsequently levied and collected a tax to pay the interest on such bonds, and paid it to the holders of the bonds: *held*, that this was such a ratification of the bonds as would bind the city, provided it would have been bound if the charter had been in force at the time the bonds were issued."

American Railroad Journal.

Saturday, October 27, 1860.

Railroad Reports.

Railroad Companies will oblige us by sending us copies of their Reports as soon as they are published.

Pittsburg, Fort Wayne and Chicago R. R.

The committees representing all the parties in interest in this road have recommended the following plan for the re-organization of the affairs of the company: The road to be sold under process for foreclosure to the following parties, viz.: J. F. D. Lanier, L. H. Meyer, S. J. Tilden, Samuel Hanna, and J. Edgar Thomson, and a new company organized by which new classes of bonds and stock for the benefit of the holders of bonds and shares in the old companies, are to be issued as follows:

1st *Mortgage Bonds* $5,250,000, being a first lien on the entire line and equipments of the company, to bear interest after the first of January 1862, payable semi-annually in six classes; the interest on one class to fall due on the 1st of each month; the principal to be redeemable July 1st 1911, or at the option of the company after the first day of July, 1866. This class of Bonds may, at the option of the holders, be converted into 6 per cent. Bonds, irredeemable except by the operation of a sinking fund of one per cent. annually, till $2,500,000 shall be redeemed. The holders of the bonds are to be entitled to vote at the meetings of the stockholders at the rate of one vote for two hundred dollars of the par amount of said bonds.

2nd *Mortgage bonds* $5,100,000. These bonds are to bear interest after April 1st, 1862, and contain the same provisions as the 1st. Mortgage Bonds in reference to the rate of interest; to their redemption and conversion into irredeemable bonds, and also in reference to voting at the meeting of the stockholders. A further clause provides that in case of sale of the road under

this Mortgage, bonds to the amount of $400,000 shall have preference as to payment.

3d *Mortgage Bonds* $2,000,000. These Bonds entitle the holder to interest at the rate of 7 per cent. after the first day of April 1862, out of such balance of net earnings as may remain after the interest and sinking funds previously provided, and maintaining the road. The holders are entitled to cast one vote for every hundred dollars held by them.

Share Capital. The share capital of the new company to be $6,500,000. The dividends in the same to be limited to 6 per cent.: any surplus then remaining to be paid to the sinking fund for the redemption of the first bonds.

To carry out this plan the holders of the 1st Mortgage Bonds created by the original company are required to assign to certain parties designated by the purchasing committee, their bonds, with the coupon unpaid, whether funded or not, and thereupon to be entitled to the bonds of the new corporation of the same nominal value as the amount surrendered.

The *Second Mortgage Bonds* and *Income Bonds* of the Ohio and Pennsylvania Company; the *second and third* Motrgage Bonds of the Ohio and Indiana, and the construction Bonds of the Pittsburg, Ft. Wayne and Chicago have the following provisions in their favor—they are to be surrendered in the same manner as the 1st Mortgage Bonds, with the unpaid interest, and their holders to be entitled to the *second* Mortgage Bonds of the new corporation to an equal amount, and for such coupons as matured on, or before Oct. 1st, 1859; to third mortgage bonds for coupons maturing after the date last named, and up to the 1st of April 1862.

The holders of the *second* mortgage bonds of the Ohio and Indiana Railroad Company are to be entitled to receive for their bonds, that class of the second mortgage bonds having preference of payment as aforesaid, for the reason that the lien created by the two mortgages on this section of the road does not much exceed, per mile, the first mortgage on other portions of it.

The foregoing provision applies only to such bonds as were sold prior to July 1st, 1860.

Real estate bonds.—These classes of bonds issued by the Fort Wayne and Chicago and the Pittsburg, Fort Wayne and Chicago, to be assigned as aforesaid and converted at their par value, and coupons, into *third* mortgage bonds of the company.

The *construction* bonds now outstanding as collateral may be used in the adjustment of the floating debt at rates to be first determined by John Ferguson, Esq., and approved by him.

All debts of the company not included in the foregoing classes may be exchanged for an equal amount of 3rd mortgage bonds of the new company. The nature and amount of such debts to be determined by the parties appointed by the purchasing committee.

The stockholders in the old corporation to receive stock in the new, equal in amount to that held by them.

The time for carrying out the above plan to be determined by the purchasing committee, which is to act by the majority, and its action in the premises, upon all questions, to be final and conclusive: The plan to be carried out in 60 days after the 1st of January, 1861. Active measures are now being taken to carry it into operation.

The Share and Money Market.

The share market is experiencing all the terrors of a panic, prices having fallen off in some instances, from 10 to 15 per cent. within a very few days. It is something extraordinary that while there has been such a fall in railroad securities, money should remain so abundant, and such apparent confidence should continue to exist in business circles. Banks are discounting as if they felt no apprehension for the future. The United States Loan recently put out was taken at very favorable rates for the Government—a five per cent. security commanding a small premium. Money continues very easy, and but for the fall in stocks, the political matters now occupying public attention would seem to exert no influence whatever upon business affairs. We presume there will be no recovery till after the election has taken place. That railway securities should have fallen so rapidly shows that public confidence is far from being fully restored in reference to this class of investments—particularly such as are upon this market; for we do not see a corresponding decline elsewhere. That our companies are not yet all purged of rogues, recent events in the Rock Island fully prove. A longer trial must be had before the apparent success of railroads can be taken for real. The recent decline has not been owing so much to apprehension about the future as to the distrust which so long prevailed, and taught by a bitter lesson, as to the real value of railroad securities. We shall get over this by and by, but we certainly have not done so yet.

Grand Trunk Railway of Canada.

The financial condition of this enterprise is exciting great attention in England, as might be expected from its vast cost, and from the fact that Englishmen have furnished the capital for its construction. As some grand mistakes were made in the construction of the road, it is very probable that equally grave ones may be repeated in any attempt at an adjustment of its affairs.

The road being commenced under the auspices of the Province, political ideas, or necessities, had a great deal more to do with the original plan, and the manner of its execution, than commercial. As the Province contributed largely toward its cost, it became necessary that every portion of it should share in its benefits. The company was required to extend its line from one extremity of the Province to the other, without any regard to the question of income. That portion, consequently, from Richmond east to Quebec, including the extension to the River de Loup, we presume does not pay running expenses. We doubt whether the line from Toronto to Detroit pays any better. No matter how productive the central portions of the road may be, its earnings are sacrificed to keep the extremes in motion.

If Canada had formed a part of the United States, the mistakes committed in the Grand Trunk enterprise would have been avoided, as in such case commercial rather than political considerations would have prevailed. But commercially, Canada is a part of the United States, as almost entire freedom of trade exists between the two countries. The trade of a large portion of the Province tends toward New York by the same law that brings that of Ohio to this city. Any attempt to divert it will prove utterly futile. This fact should be borne in mind in any plan designed for the relief of the Grand Trunk. Any scheme controverting the laws of trade will only involve the company the deeper in the mire.

The people of Canada, as well as the managers of the Grand Trunk Railway, have acted upon the idea that the Province was a "great country." It is a great country, but it does not follow that its trade justifies the construction of an elaborate system of railroads independent of that of the United States. The great misfortune of the Grand Trunk is that the direction of trade in Canada is at right angles to its line. This tendency will steadily increase in force from year to year. The United States will soon become almost the entire market for Canadian products, and will supply in turn nearly all the merchandise and manufactures consumed in the Province.

The true remedy in this case is for the Province to assume the road. We see no other alternative. In no other way can a great moral responsibility be properly met. We are confident that the case is only fairly to be represented to secure such a result.

Buffalo, New York and Erie Railroad.

The Auditor of the Buffalo, New York and Erie Railroad, makes the following statement of its condition, Aug. 1, 1860.

FUNDED DEBT.

		Due.	Interest.
1st Mortg. Bonds...	$2,000,000	1877,	7 per cent.
2d Mortg. Bonds...	380,000	1872,	7 per cent.
Total	$2,380,000	or,	$16,760 56

—per mile.

No arrearages of interest.

FLOATING DEBT, AUG. 1, 1860.

Bills Payable	$115,527 94

Other Roads	5,889 60
Individuals	53,553 00
Total	$206,891 89

ASSETS.

Cash balances due and material on line	$91,597 54
Interest held in other and connecting roads	165,135 72
Total	$256,733 26

Capital stock, $680,000, in shares of $100 each.

Total cost, $6,150,000.

Cost to the present Co. $1,150,762. (Sept. 30, 1859.)

EARNINGS.

	1st 11 mos., '60	2d year '59.
Gross Receipts	$474,778 73	$541,249 60
Gross Expenses	333,411 28	368,928 24
Net Earnings	$141,162 45	$172,321 36
	3d 10 mos., '60.	Total.
Gross Receipts	$457,463 77	$1,473,492
Gross Expenses	275,196 49	977,736
Net Earnings	$182,266 68	$495,759

This road forms the termini at Buffalo and Rochester of the Erie Railroad and, by a recent arrangement, we make connection at Elmira for Philadelphia and Baltimore business, and the coal and iron fields of Pennsylvania. The road was purchased by this Company at about half its cost, (being then incomplete), and, with its valuable real estate in the city of Buffalo and elsewhere, and with its full equipment, is, as its cost to the present Company, one of the cheapest roads in the United States. The roadway and equipments are all in good order, a large sum being annually expended for the permanent improvement of track and machinery.

Charleston and Savannah Railroad.

About the first of July last, the Charleston and Savannah Railroad company, being aware of the tedious delays attendant upon the construction of the permanent bridge over the Savannah river, determined to build one of a temporary character, to serve the purpose of passing their trains until the other was completed, and at that time concluded a contract with Messrs. McDowell & Callahan, to furnish all material of whatever nature, and furnish complete, in ninety days, the "temporary structure."

The work has been ready to receive the track for some days past. This structure is over 1,800 feet long, commencing on the Carolina shore with about 1,000 feet of trestling and piling, then one span, Howe Truss of 150 feet clear span, next to which is a pivot draw of 190 feet in length, turning on a pivot pier in the centre, affording two openings of 80 feet each, for the passage of boats; and on the Georgia shore, about 500 feet more of trestling and piling, making the length as above. The work has been executed under the supervision and discretion of Major Edward Manigault, the efficient and energetic chief engineer of the company, who has been very ably aided by the skill, intelligence, and indomitable perseverence of M. P. Muller, a resident of our city, who is the engineer in immediate charge of the work. The rapidity with which this work has progressed speaks well for those connected with it, and also conveys to our mind the fact, that we shall in a very few days have direct connection with Charleston by rail, as we understood the track is laid continuously from the Savannah river to a point within two miles and a half of where they connect with the Central Railroad, which is a short distance from the race course. The completion of this road, with that of the Atlantic and Gulf, should impress upon the mind of the most unobservent, the fact, that our "Forest City" must yet draw within her grasp the trade and travel of large sections of country heretofore undeveloped. —*Savannah Express.*

Pacific Railroad.

The directors yesterday placed under contract all the remaining heavy work on this road, lying in Jackson county. It will not be forgotten, that at an election held in Jackson county, last August, the County Court were instructed to subscribe two hundred thousand dollars of additional stock, issuing the county bonds at one, two, three and four years, with ten per cent. annual interest for its payment; provided, however, that the proceeds of the same were to be expended in said county. The stock has just been subscribed, and six more miles have been put under contract, so that there is at this time seventeen miles of the road, beginning at Kansas City and extending eastward, under contract; that portion between Independence and Kansas City, commenced last July is being vigorously worked, and unless unforseen circumstances present themselves, the road will be opened for travel from Kansas City to Independence before the fourth day of the ensuing July, by which time it is expected the cars will be running to Warrensburgh, in Johnson county, leaving only a gap of fifty miles to a completed road.

In the meantime, however, it is understood that by the terms of the Cass county subscription, the road west of Warrensburg and east of the line of Jackson county, will be put under contract; so that with *wholesome legislation at an early day* in the ensuing session of the General Assembly, this great road, from which the State as well as our own city is to be so much benefited, will be finished, and the territory west of our State become tributary, which has for a season been estranged, will return to its first love.

On Saturday next the cars will run to Smithton, in Pettis county, six miles west of Otterville, and on the first of December ensuing to Sedalia, the county seat (Georgetown) of Pettis county.

Since the road has been opened up to Otterville, stage communication has been formed to Lexington, Boonville and Harrisonville, in Cass county, and much if not all, the travel hertofore going to Hanibal and St. Joseph have come over the Pacific.

The Southwest Branch extends to Dillon's, 104 miles, and will open to Rolla, in Phelps county, before the meeting of the General Assembly, and before the ensuing March, it is contemplated to extend the road to the Little Piney, or Gasconade.—*St. Louis Republican Oct.* 19.

C. J. SCHULTZ,
MANUFACTURER OF
Bridge Bolts and Draw-Bridge Castings.
Letterbox 1399. Pittsburg, Pa.

PATENT ASPHALTIC
ROOFING FELT.
THE BEST, CHEAPEST AND
MOST DURABLE ROOFING KNOWN.

THE IMPROVED PATENT ROOFING FELT furnished by the Subscribers is entirely free from the objections hitherto urged against articles that have been furnished under similar names by various parties.

It makes a **light, cheap, durable,** and perfectly **Fire** and **Water-proof Roofing** for **Churches, Farm Buildings, Railroad Depots, etc.**

It forms the best and cheapest lining for Stores, Granaries, Barns and Wooden Buildings, as rats, mice and other vermin will not touch it.

It stands all climates and has been extensively furnished to the British Government for use in their widely scattered foreign possessions. The Turkish Government used large quantities of the Felt for roofing their hospitals and stables in the late war.

In this country first class dwelling houses have been roofed for three years with this Felt, and the owners who used tin now prefer this Roofing Felt.

Also an entirely new, superior and cheap **ROOFING CEMENT** for the above Felt and leaky tin roofs.

For Samples, Circulars, etc., apply to

EDMISTON BROS.,
No. 3 Bowling Green, New York.
N. B.—Agents wanted.

50/56 **RAILROAD IRON.**

ON ship board and ready for immediate delivery from ship Bernard direct from Wales by
THEODORE DEHON,
2143 10 Wall st., near Broadway.

TO CONTRACTORS.

PROPOSALS will be received by the Long Dock Company until November 3d, for excavating and loading in the cars of the Company, 500,000 cubic yards of earth, at the west end of the Bergen Hill Tunnel. For further information apply to J. HOUSTON, Assistant Engineer's office, Hudson City.

The Company reserve the right to reject any bid that may be offered.

Oct. 11, 1860. J. W. ALLEN, Engineer.

ENGLISH WATCHES.

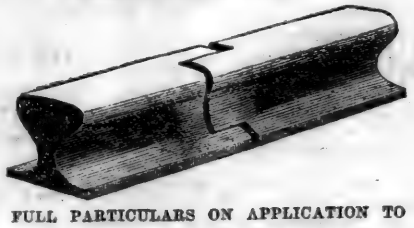
HISTORY
OF THE
RAILROADS
AND
CANALS
OF THE
UNITED STATES
OF AMERICA.
EXHIBITING THEIR
Progress, Cost, Revenues, Expenditures
AND
PRESENT CONDITION.

By HENRY V. POOR, Esq.,
Editor of the 'AMERICAN RAILROAD JOURNAL.

Illustrated by large and elegant Maps.

THIS work, which is the first of its description ever issued, and which traces the history of AMERICAN RAILROADS AND CANALS through their varying fortunes from the earliest period to the present day, has been written under peculiarly favorable circumstances, whether in relation to editorial experience, or the possession of the material necessary for the proper illustration of the subject, and on these accounts claims a reliability as to facts and deductions which under other auspices could not have been obtained. It is based principally on official reports published from year to year, and which for the past THIRTY YEARS have been accumulating in the office of the AMERICAN RAILROAD JOURNAL. To collate these, and present the essential facts relating to each enterprise, has required patient research and persistent labor. The result has been more successful than could have been anticipated under any circumstances—the general history, the progress of construction, the financial movements and the business operations of every road and canal in the United States being given in detail, the aggregate of all summed up and the averages deduced. The present condition of each work is elaborately set forth in full descriptions of property, share capital, bonds and other evidences of debt, etc., etc.; and the several departments of the subject are so carefully classified and arranged that comparison is rendered easy. The publishers, indeed, have no hesitation in presenting the work to all interested in internal improvements as complete and accurate in every respect—one that in reviewing the past lays the foundation for the future, and which is indispensable alike to the merchant, the banker, the contractor, and indeed to all who invest capital in railroads or canals.

The work will consist of THREE volumes royal 8vo, and be illustrated with a series of large **MAPS** specially drawn to accompany these volumes.



The **first** volume, embracing the States of MAINE, NEW HAMPSHIRE, VERMONT, MASSACHUSETTS, RHODE ISLAND, CONNECTICUT, NEW YORK, NEW JERSEY, PENNSYLVANIA, DELAWARE and MARYLAND, **is now ready for delivery.**

The **second** and **third** volumes, the one embracing the WESTERN, and the other the SOUTHERN STATES, are now being prepared and will be issued at an early date.

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT
Centrifugal PUMPS

ARE the best and cheapest Pumps made for **RAILROAD STATIONS, MINES, FACTORIES, TANNERIES, PLANTATIONS, DRAINAGE, IRRIGATION, WRECKING,** and general use.

Made entirely of metal, without working valves or rubbing surfaces, they pass sand, fine ore and gravel, without injury. Capacity from 20 Galls. to 1,000 Bbls. per minute.

POOR'S History of the Railroads and Canals of the United States.

NOTICES OF THE PRESS.

A work of great labor and skill, presenting a vast amount of historical and statistical information compiled and arranged in a very lucid, compact, and reliable form.—*Independent.*

This is an exceedingly valuable work. Mr. Poon is known as the editor of the *American Railroad Journal*, and is well qualified to have prepared a volume like the present one. It is designed as a comprehensive statement of the progress, cost, revenues, expenditures, and financial condition of our canals and railroads. Such a work has long been needed, for it shows that a single report does not always show the true position of the different Canal and Railroad Companies. Brief abstracts of different railroad laws are given, and maps are furnished of the New England and Middle States, exhibiting their physical features, political divisions, and the lines of the railroads and canals within their limits. The work has evidently been carefully prepared and must have involved a large amount of labor. The second volume will be issued shortly.—*Courier and Enquirer.*

The abundant statistical information contained in this volume is of great value in the present condition of the railroad interest in the United States. It presents a condensed statement of the progress, cost, and financial relations of the various American railroads and canals, a history of their operations from year to year, an abstract of the laws of the several States relating to them together with a great amount of important incidental details.—*Tribune.*

This is a work of extraordinary labor and research. It is a history, in detail, of all the Railroads and Canals of the United States. We certainly could not have believed that so complete and detailed a body of statistics upon this subject *could* have been gathered together.

Lawyers, especially, will find this feature of the work of great value for purposes of reference. It enables them to trace at once the whole legislation relative to any particular railroad. They can also trace the history of the issue of all classes of bonds by all the various roads, dates of issue and payment, order of priority, how secured, &c., &c.—*New York Daily Transcript.*

Few gentlemen in the United States are better fitted than Mr. Poor to prepare such an elaborate work as this. The writer of such a work must, in the first case, be well informed on the subject under consideration, and likewise have under his control a mass of statistical details; without which, the work could not be executed. The need of the present volume is obvious. Each State has its own System of railroads, and has a separate page in the history of the subject. Unfortunately, there is not in this country a Statistical Bureau or Central Office, for the compilation of railroad, banking, commercial and other details, whereby an annual or occasional work could be readily prepared, showing the fact and figures of the year. The British government has the advantage of us in this respect; and under its authority is published annually, or oftener, an official and reliable summary of railroad capital, revenue, expenditure, &c.

Mr. Poor has rendered an acceptable service in the compilation and publication of the present History of the Railroads and Canals of this country. The value of the work is much enhanced by two large and accurate maps; first, of the New-England States, and secondly, of the middle Atlantic States; exhibiting their physical features, political divisions, and the lines of railroads and canals within their limits. The second volume is in preparation, and will be illustrated by maps of the Southern and Western States, showing the depots and stations of each line, with the distances respectively. For convenience of reference, a brief abstract of the railroad laws of each State is given; the general railroad law of New York in full.—*Bankers' Magazine.*

All persons interested in railroads or canals within the limits of the United States, will be glad to learn that Henry V. Poor, Esq., editor of the American Railroad Journal, has undertaken to give the public a complete history of these various enterprises, including their origin, cost, revenues, expenses, and present condition, with full particulars of every item of interest in such a connection. The whole is to be complete in two volumes, with a case containing seven maps. The first volume, embracing the Eastern and middle States, is now issued, with an appendix of two maps. It contains 612 pages royal octavo, and is selling at five dollars, including the case with appendix. The second volume is in course of preparation, and the whole will form a work of very great value, indispensable to a proper acquaintance with the present condition of our country and its interest resources. No one can duly estimate the amount of labor required for the production of such a history unless they are accustomed to the compilation of statistics.—*Journal of Commerce.*

Chicago, Burlington and Quincy Railroad.

Annexed is the statement of this company for the six months ending Oct. 31, 1860:

	Earnings.	Expenses.	Net.
May.....	$161,870.31	$70,905.19	$90,465.12
June.....	110,863.59	64,609.77	46,253.82
July	124,103.36	59,338.79	64,764.57
August.....	186,902.15	68,405.01	118,479.14
September...	166,747.94	79,597.82	87,150.12
October, esti.	185,000.00	70,000.00	115,000.00
Total ...	$934,987.35	$412,856.58	$522,130.77
Add balance to credit of Int. and Ex. acc't.....			22,562.83
Total			$544,693.60

From the above net sum should be deducted the following items:

Interest on bonds paid ..	$112,154 84	
Transfer office exp. paid.	300 00	
Taxes paid	8,394 15	
Payment to sinking fund.	17,000 00	
Expenditures on permanent improvements	40,008 78	
Rent of depot at Chicago.	20,000 00	
		$197,857 77
Leaving to the credit of income account for the six months, the sum of.		346,835 83
The net earnings from 1st to 15th November are estimated at.....		42,000 00
Leaving on hand applicable to divid'd.		$388,835 83

from which a dividend of $5 per share has been declared, payable on the 15th day of November, proximo, to such persons as shall be holders of stock at the close of business hours, on the 31st day of the present month. Dividends on stock registered at the Boston Transfer Office, payable at the office of J. E. Thayer & Brother, in

Boston; on stock registered at the New York Transfer Office, payable at the Bank of Commerce, in New York; all other dividends payable at the Treasurer's Office, in Chicago, in Exchange on New York or Boston. The Transfer books are ordered to be closed from the 1st to the 10th proximo, inclusive.

It will be seen that the net earnings for the six months ending October 31 will be over 7 per centum, and the credit to income account, which stood on the date of our last annual report at $733,223 56, will be increased nearly 3 per centum on our capital stock, after paying the present dividend. This large balance of income account has been mainly used in paying off the floating debt, now extinguished, which was created by advances to the Peoria and Oquawka and Northern Cross Railroad Companies, for which advances there is every reason to hope this company will hereafter receive an equivalent, not only in increase of business, but by absolute payments, in more direct form.

The great depression of the business of the West has passed, and we see no reason to doubt that the return to the present and increasing prosperity is to be substantial and durable; in fact, we consider the produce now in the country, depending on our road for an outlet, equal to the full employment of all our stock till the period of another harvest.

Railroad Consolidation.

We learn from the Nashville papers that the Tennessee and Alabama, the Central Southern and the Tennessee and Alabama Central Railroad Companies have consolidated the running of the three roads from Nashville, Tennessee, to Decatur, Alabama. The road will be completed early in November, when the trains will be run through to Decatur without change of cars. The management of the entire line is under one set of officers. Col. W. O'Neil Perkins has been elected General Superintendent of the whole line.

Iron Bridge.

The Phœnix Iron Company, perhaps the largest organization devoted to the manufacture of iron in America, are about to commence the construction of iron bridges for railroad and other purposes. The plan adopted is the lattice, all parts of the structure being of wrought iron. A model has been made, to a scale of one inch, to the foot, and tested by the company's engineer, Mr. George Walters. The model represents a 150-ft. span, and is 12 ft. long, 2 ft. high and 18 in. wide over the trusses. The top and bottom chords of the model are made, each, from a portion of a 6-inch Phœnix rolled beam, the cross section of each chord being 1.65 square inches. On each side of each chord a shoulder is planed to take the thrust of the lattice bars, this shoulder being three-sixteenths inch wide, and ⅞ inch deep on each side. The lattice bars are three-sixteenths inch thick and 1⅛ inch wide, crossing each other at an angle of 22½ deg. from a vertical line, and at a distance of 5 in. from centre to centre. Each bar crossing three other bars, with a ¼ inch rivet at each intersection. In the model, the lattice bars are of uniform size throughout, and the chords are of the same section from end to end. In large spans, the trusses would be proportioned, at every point to the strain, at that point. The whole weight of the model is 547 lb. and the test which it is calculated to bear represents 2¼ tons to the running foot of the full sized span. The model has been tested by attaching weights to a cast iron saddle, bearing, for 20 in., at the centre of both trusses. Weights were added progressively and the deflections noted, the increase of deflection following in regular amounts the increments of load. With a weight of 37,560 lb., or nearly 19 tons, the greatest deflection was less than half an inch, being .453 inch after the load had stood for an hour upon the model.

The Phœnix Iron Company are confident that they can make bridges, upon this plan, which shall compete successfully with timber bridges. In France and Germany nearly all the railroad bridges, lately constructed, are iron latticed trusses, one railroad bridge over the Vistalu, in Prussia, having six lattice spans of 397 ft. each.—*The Engineer.*

Journal of Commercial Law.

CONTRACTS IN RESTRAINT OF TRADE, WHEN VOID AND WHEN SUSTAINED; LIQUIDATED DAMAGES.

It is a sound maxim of the law that contracts, by the terms of which one or more parties are prohibited from exercising any trade, business or profession, are, in general, void. It rests upon the broad principle, that whatever contravenes public interests should be repressed and the rights of the community considered paramount to mere private gains.

But, while this maxim is, in general, held to be the law, it has also been decided, that a contract not to exercise a trade or carry on a business at a particular place, made upon good consideration, may be upheld, if shown to be reasonable; and if the restraint upon the covenantor be not greater than is needed for the protection of the covenantee in the enjoyment of his trade or business.

This is held in *Dunlop and others against Gregory and others*, which case, although raised and decided some few years since, has not until recently been reported. The plaintiffs, in January, 1835, with several other individuals, all being interested in steamboats running as passage boats on the Hudson river, formed an association under the name of "The Hudson River Steamboat Association," for the purpose of keeping up a regular line of boats in accordance with the partnership articles then entered into. This association was to continue until the 1st of January, 1843. On the first day of April, 1840, the association owned five boats, the Albany, Champlain, Erie, Swallow, and De Witt Clinton, and two-thirds of the steamboat Robert L. Stevens, all of which were running as passenger boats between New York, and Albany and Troy. The other third of the Robert L. Stevens was owned by Samuel Rexford, one of the defendants in the suit. On the day last mentioned, the several members of the association being interested to this extent in the Robert L. Stevens, sold their interest to the defendants for $14,500, and executed bills of sale therefor. On the same day, the defendants entered into an agreement under seal, to the effect that the Robert L. Stevens should not be run as a passenger boat above the village of Saugerties upon the Hudson river by any persons whatever, it being understood by all the parties, that this was an essential and important consideration to the agreement of sale. And it was further set forth that the said Uriah Gregory, Samuel Rexford, and John Elting, jr., do hereby agree to and with Robert Dunlop, Smith Culter, James A. Stevens, Anthony N. Hoffman, M. Van Buren, etc., to become responsible in damages; and which they hereby agree to pay to Robert Dunlop, Smith Cutter, etc., if the said steamboat shall or may be run above the village of Saugerties aforesaid, as a passage boat by any person or persons whatever. And it was agreed that the said damages should be liquidated at two hundred dollars for each and every passage made by the said steamboat above the village of Saugerties.

The association expired by its own limitation in 1843. Many of its members, before 1845, had sold out all their interests in the steamboats running upon the Hudson river; and in that year the only ones of the covenantees in the agreement, who retained an interest in such property were R. P. Hart, and two of the plaintiffs. These individuals were still part owners of two of the five boats above named, and of other steamboats purchased since the date of the agreement, which were running as passage boats between New York, and Albany and Troy. In the spring of 1845, the Robert L. Stevens, then owned by the vendees of the defendants, made nineteen passages between New York and Albany, carrying passengers and freight.

R. P. Hart having died before the time of these passages the action was brought in the name of all the other covenantees in the agreement, as his survivors, against the covenantors to recover the damages therein liquidated, for the breach of it. The case was tried before a jury in 1846, and a verdict given for the plaintiffs, under the direction of the judge, for $3,800; being $200 a trip for each of the nineteen trips made, according to the agreement. Judgment was affirmed by the Supreme Court and the defendants appealed. The following is the decision of the N. Y. Court of Appeals.

Paige, J.—It is contended on the part of the appellants, that the agreement on which this suit is brought is in restraint of trade, prejudicial to the public interests and against public policy; and that if valid at the time of its execution it was invalid at the time of its breach, because the partnership for whose benefit it was made had expired without assigning it.

Contracts, upon whatever consideration made, which go to the total restraint of trade, such as obligate a man not to pursue his occupation, or exercise his trade, anywhere in the State are void Such contracts are injurious to the public, and operate oppressively upon one party without being beneficial to the other. But a contract not to exercise a trade or carry on business in a particular place made upon good consideration, may be upheld where sufficient reasons are shown for entering into it. The contract to be upheld, must appear from special circumstances to be reasonable and useful, and the restraint of the covenantor must not be larger than is necessary, for the protection of the covenantee, in the enjoyment of his trade or business. Within this principle I think the agreement in question was valid and binding on the defendants.

Because a part of the covenantees sold out their interests in the steamboats running on the Hudson river, between the making of the agreement and its breach by the defendants; the remaining covenantees, who retained their interests in such boats, ought not to be deprived of their remedy on the agreement, to recover the damages sustained by them by means of such breach. The obligation of the defendants, was an obligation to all the covenantees jointly. This suit having been commenced before the adoption of the code, it was necessarily brought in the name of all the covenantees. The action can be sustained if any one of the plaintiffs has a beneficial interest in the suit. The covenant enured to the benefits of those covenantees who retained their interest in the steamboats running on the river. The other covenantees who had sold out, and therefore could

not be injured by the breach of the agreement, are merely nominal parties to the suit.

The dissolution of the Hudson River Steamboat Association is no defence to the suit. The agreement was not made with the plaintiffs as members of that association, or as co-partners, but as individuals; and was intended to protect their interest, whatever that might be, in the steamboats running between New York, and Albany and Troy. The obligation of the agreement is not at an end, because the steamboat association has become dissolved; or because the partnership, of which the plaintiffs were members at the time of the making of the agreement, has expired by the efflux of time. The agreement makes no reference to the steamboat association, or to any co-partnership. Its obligation continues as long as any one of the covenantees has an interest in the steamboats running on the Hudson river between New York, and Albany and Troy; especially in any of those of which they were owners, in whole or part, when the agreement was made. The sums agreed upon by the parties, as the measure of damages for the violation of the agreement, must be considered as liquidated damages. The judgment is, therefore, affirmed.

The Grand Trunk Railroad.

The Portland *Advertiser* reports that Mr. Ward, the agent of the Barings, has been to that city, and attached for his principals the rolling stock belonging to the Grand Trunk on the American side of the line at Portland, Paris, &c. The rolling stock which originally belonged to the Atlantic and St. Lawrence Railroad Company, was mortgaged with that road, and therefore not included in the Barings' attachment, the same having been kept in good repair by the road, as agreed at the time of the lease. The *Advertiser* adds:

"The road will of course be run, for this is the only source from which the Messrs. Baring can collect their debt and they may find it for their interest to increase the rolling stock, which is all the road now needs to greatly enlarge its income. The business now crowding upon it cannot be done with the present equipment and the company had contracted with the Portland company for a large addition to their frieght cars &c., amounting to abont $200,000, but since the financial difficulties have transpired, their contract has been relinquished by the Grand Trunk, and the company has the cars completed, and the stock purchased to build the balance still on hand. Negotiations are now going on to allow the use of these new frieght cars by the road, which probably may be soon consummated satisfactorily to all parties."

Tunnel Under the Erie Canal.

A corps of engineers are now in this city making the surveys and estimates for the New York Central Railroad tunnel under the Erie Canal. It is designed to construct a double track through the tunnel, which will be a close arch all the way from Kent street to a point some distance west of the canal. The descent of grade will commence east of Sophia street, and the track will take a line westward from the north-west corner of Center Park, crossing Oak street at its intersection with Deane street. When the tunnel is completed and the new track laid, the Buffalo and Niagara Falls cars will come in and go out that way. The present track of the Buffalo road, from Sophia street to the Western Depot, as it is called, will be abandoned; also the Niagara Falls track from Brown to Lyell streets, including of course both bridges over the Erie Canal, and all the trestle work.—*Rochester Union.*

The Boonton Railroad.

The Newark N. J. *Advertiser* says that this road is shortly to be commenced. Ground will be broken at the Great Notch, three miles southwest of Paterson, and the road be completed to Little Falls with the least possible delay. The farmers along the projected line have not only conceded the right of way, but made such liberal subscriptions to the company's stock that the directors feel encouraged to proceed forthwith. In Little Falls, Fairfield, Caldwell, Troy, Parsippany and Pine Brook, near which places the road will run, about $50,000 have been taken. The Boonton Iron Co., and the proprietors of mines and iron works in Morris county, will no doubt do their full share towards such a needed improvement, when called upon.

At the Great Notch, three routes will be open to Paterson, where a competing coal road is much needed to Bloomfield or Belleville. At the same time, it is understood that a branch line will soon be commenced between the Ringwood mines, in the upper part of Passaic county, and the Boonton railroad, somewhere near the village of Little Falls. Some of these roads will connect with the Morris and Essex Railroad, at Denville, and others with the Bloomfield Railroad, at West Bloomfield. In either case the travel would pass through Newark to New York.

Polk Slate Quarry Railroad.

We take great pleasure in transferring to our columns the opinions of men of inteligence and experience, in regard to the importance and benefits of our Railroad, from Marietta towards Memphis, Tenn.

Mr. Wadsworth, Chief Engineer of the Dalton & Jacksonville Railroad Company, in his late report, speaking of the *connections* and *probable business* of that Road, says: "In addition to the above, as through connections, there is constructing from Marietta, by way of Van Wert and Cedar Town, to the Alabama line, at head of Hurricane Creek Valley, the *Polk Slate Quarry Railroad*, which may become an important feeder to, and may send a vast deal of freight over your Road. This will be the shortest outlet to the North, West, and South, for large quantities of *roofing slate*, so justly becoming celebrated in all parts of the country, and which, when these lines of Railroads are built up, will bear transportation to St. Louis, New Orleans, and Charleston.

The Quarry is a fortune to the whole country, and as the facilities of the railroad approach, it will come to be appreciated. This Railroad is of itself a project of very great importance, and besides being profitable as a *local Road*, it must eventually be a part of a very extensive line from the seaboard to the Mississippi Valley. The route lies very nearly in the direct line of Charleston, Augusta, Marietta, Decatur, and Memphis, and when it shall have been built up, will shorten the present route, *via* Chattanooga, from eighty to one hundred miles."—*Dalton Times.*

Steel Springs.

For the last six months, Messrs. James Jeffries & Sons, the well known spring manufacturers, of this city, have adopted a new mode of securing the leaves of their springs together. No hole is made through the leaves nor is any bolt used. Two notches are made in each edge of the two top and two bottom leaves, these notches being made where they will be covered by the band which, when shrunk on, is indented, by means of a punch, into each notch. The band is thus indented at four points on each side, or at eight places in all, and has so firm a hold upon the leaves that loosening would be impossible. The top and bottom leaves being thus held firmly by the band, the intermediate leaves are held firmly in place by the studs, punched in the ordinary manner, at their ends. The metal taken out of the top and bottom leaves in making the notches is not one half that which would be removed for a bolt hole, while the intermediate leaves are left of the full width and strength. Springs thus secured together can never work loose, and there is no extra part which like a bolt, can break or come off.—*The Engineer.*

Railroads in Texas.

Our railroad affairs stand as follows. First, connection with the Mississippi: Road to Monroe, 90 miles, will be completed by January. From Shreveport to Texas line, 20 miles, will be finished within the next six months. Twenty-five miles finished in Texas, making daily trips, and 50 miles under contract to be finished in fifteen months. Between four and five hundred hands are now at work on the Southern Pacific road. The distance from Monroe to Shreveport is about one hundred miles. This section ought to be finished in fifteen or eighteen months. When completed, we will have an uninterrupted chain to the Mississippi river and extended 75 miles into Texas; in all about 300 miles.

In the mean time, the road from Sabine Pass will be brought to Nacogdoches, and the road finished 50 miles from Jefferson, extending in the direction of the prairies, and doubtless from that place to Marshall.

In less than two years, therefore, we may expect to be placed within 24 hours of New Orleans, and three days and a half of New York.—*Marshall Republican.*

Railroads in Kansas.

St. Louis, Oct. 20.—The State Railroad Convention, to devise a system of railroad grants to be presented to Congress, assembled at Topeka on Wednesday last.—Ex-Governer Roberts, of Wyandotte, presided, and John A. Martin, of Atchison, acted as secretary. A very large number of delegates were present, nearly every county in the Territory being represented.

The convention adopted the following schedule of railroad grants, viz: One grant for a road from Wyandotte, in the Kansas Valley to Fort Riley; one for a road from Atchison westward to the gold mines; one for a road from Atchison via Topeka and Council Grove, in the direction of State Fe; one for a road from Lawrence, south in the direction of Fort Gibson; and one for a road from the Missouri State line, known as the Jefferson City and Neosho Valley Railroad.

The Convention was in session two days. A committee was appointed to urge these grants upon the favorable consideration of Congress.

An Englishman on American Railroads.

At a banquet given in Cincinnati to the Railroad Convention by the Adams Express Company, Mr. Evans, one of the English Directors of the Erie Road, made the following remarks:

"Mr. Evans said he desired to offer the toast 'Success to American Railways.' He was pleased to meet around this board so many intelligent practical managers of the railroads of the country. He had been much pleased with what he had seen, since his arrival in this country of the manner in which the roads were managed, and believed the day was not far distant when the would amply repay their projectors. It was true they had too many roads. The roads had been built too soon and too quick, but he thought that with judicious management and proper economy they would still prove remunerative. He spoke of the spirit of competition as being one great reason why so many roads had been built, and thougbt that that would soon find a check.

"He referred to the difficulties and troubles that the railroads of this country were now undergoing, and said that the railroads of England had passed through the same troubles. They were now out of darkness, and he had no doubt but that our roads would soon emerge from the gloom that now overshadows them. The tribulations that the roads in England had gone through had resulted to their advantage. He spoke of the importance of promoting good feeling and harmony between the officers of the different roads, and thought that such social meetings as this did much to secure a better feeling. He must say

that he was pleased with what he had seen of our railroads. There was much in the management of the roads of this country that might be copied and followed by the roads in England with advantage and profit, and their were other things that our roads might perhaps copy from them with equal advantage, and one of them was the Railroad Clearance System."

Hartford, Providence and Fishkill R. R.

The annual meeting of the stockholders of this company was held at Hartford on the 25th ult. The earnings for the year ending September 30th, 1860, were:

From Passage	$185,403
" Freight	167,048
" Mails	8,500
" Express, rents, etc.	4,376
	$365,327
Total working expenses	208,276
Net earnings for the year	$162,051
Deduct interest due on bonds Jan. 1, and July 1,	143,745
Leaving a net surplus of	$18,306
And last year's surplus	27,829
Total surplus	$47,116

Number of miles run during the year, 258,087—equal to ten times around the globe. About 400,000 passengers have been carried over the road during the year, and not one has been injured. The road-bed, superstructure and equipments are all in good order. The legality of seven per cent. interest on over-due bonds has recently been settled by the courts, and those bonds, of which there are about $100,000 have a permanent value in the market.

The sinking fund, deposited with the trustees of the two cities—$44,164 34 in Hartford, and $33,400 in Providence—for the payment of the $1,000,000 of bonds of the cities, maturing in 1876, amounts to $77,564 34.

The general statement is as follows:

Stock		$1,537,939 96
Preferred stock issued	$500,000	
Preferred stock claimed to be hypothecated	101,200	
		398,800 00
Bonds issued	2,055,500	
Of which are claimed to be hypothecated	26,000	
		2,029,500 00
Notes and accounts payable		230,802 33
Premium and interest received on bonds sold, issued by cities of Hartford and Providence		100,324 84
Profit and loss		90,767 44
Cancelled bonds paid by trustees		52,230 00
		$4,440,364 79
Cost of road		$3,903,455 56
Equipment		302,510 93
Materials and supplies delivered trustees		29,358 20
Sinking fund, city of Hartford	$44,164 34	
Do. do. Providence	33,400 00	
		77,564 34
Sundry notes and accounts		124,698 04
Cash on hand		3,787 82
		$4,440,364 79

The following gentlemen were elected directors for the ensuing year:—James G. Anthony, Henry Lippitt, Byron Sprague, George B. Holmes, of Providence; Stephen Harris of Phœnix, R. I.; Joseph Trumbull, Alfred Smith, A. S. Beckwith, Albert Day, of Hartford; Virgil Cornish, of New Britain; John P. Elton, of Waterbury, James G. Anthony was re-elected President, and E. M. Brigham, Secretary and Treasurer.

Minnesota Central Railroad.

The following well known railroad men and capitalists of the West and New York city have filed in the office of the Secretary of the State of Minnesota, in pursuance of the general railroad law of the State, articles of incorporation of a company entitled "The Minnesota Central Railroad Company," which purposes to construct a Railroad from an Eastern and Southern connection by the lines of the Land Grant Railroads to St. Paul, and thence to St. Anthony and Minneapolis, and up the Mississippi Valley, forming part of a central line of railroad through the Ssate: Col. R. B. Mason, Amasa Stone, Stillman Witt, Sela Chamberlain, Edward B. Wesley, late of the New York *Times*, David R. Martin, President of the Ocean Bank of New York, and Milton Cartwright, Engineer and Railroad Contractor of New York city.

This Company, says the *Minnesotian* propose to ask of the Minnesota Legislature at its next session, such legislation as will enable them to build the Central Railroad by the route above indicated; and will in advance, as security that they complete the railroad, surrender to the State to be canceled, from one to one and a half millions of dollars of the "Minnesota State Railroad Bonds" now outstanding; the State to issue to them new bonds equivalent to the amount so surrendered, only as the cars are on the road.

The Maryland and Delaware Railroad.

The work on this road is progressing in a rapid manner. The grading from the point of connection with the Delaware road, at Smyrna, to the State line has been completed, and workmen are now engaged in repairing and trimming up that part of the road in this county heretofore graded, The cross-ties and rails have been laid on a portion of the road in Delaware, and it is confidently expected that by the first of January next, the road will be completed and in working order as far down as Greensborough.—*Denton Journal.*

Minot's Ledge Lighthouse.

The interior of this structure is being rapidly completed. The workmen labor on it night and day. The wood work of the house, we believe, is entirely of oak, and will be, when finished, as solid and enduring as it can be made. Workmen at work in the light report that during the severest storms, thus far, only a slight trembling is felt. Capt. Alexander, who superintended the construction of the lighthouse, dined within its granite walls, one day last week, with his entire family.—*Hingham Journal.*

Coal Burning Locomotives.

The Rogers Locomotive Works are building eight coal burning locomotives for the Chicago, Alton and St. Louis Railroad.

Cincinnati Stock Sales.

Railroad Earnings.

The receipts of the Grand Trunk Railway of Canada, for the week ending October 19th, 1860, were: $80,914 75
Corresponding week, 1859: 60,032 46
Increase: $20,882 29
Total traffic from July 1, 1860: $964,063 89
Do. for same period last y: 713,870 50
Increase: $250,193 39

The following are the earnings of the Great Western Railway of Canada for the week ending October 19, 1860:

Passengers	$24,032 29
Freight and live stock	28,332 05
Mails and sundries	1,658 05
Total	$54,022 49
Corresponding week of last year	48,982 81
Increase	$5,039 68

The following is a statement of the earnings and disbursements of the Potsdam and Watertown Railroad (now owned by the Watertown and Rome Railroad), for the month of September in 1859 and 1860:

EARNINGS.	1859.	1860.
From Passengers	$6,114 03	$6,192 51
" Freight	3,912 16	4,879 56
" Mails, etc.	587 79	397 77
Total	$10,613 98	$11,469 84
EXPENSES.

American Railroad Journal.

Saturday, November 3, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

How to Invest in Railroads.

With railroads, as with individuals, the characteristics they possess are certain to display themselves, a sufficient time being allowed. The work we have just published, the HISTORY OF RAILROADS AND CANALS OF THE UNITED STATES, gives among other things, the cost, receipts from all sources, current expenses, net earnings and dividends, with the rate, of all the roads from the opening of each to the present time. The aggregate results for 10, 15 or 20 years will give very accurately the value of the route, and the character of its management. The shortest period named is sufficiently long to bring to light all mistakes, however produced; all concealments that may have been practised; and to have secured reforms where they may have been needed or can be effected. The result for such a period may be taken as the measure of value, on the whole, of the investment.

We have in this country a great many roads that can bear the severest application of the required test. Take the Boston and Worcester for example. This road was opened in 1835. Since that year, the company have never failed in its half-yearly dividends, which have never equalled *less* than 3 per cent., and have averaged 3½ per cent. semi-annually. In the mean time the road has earned a large surplus, which has been expended in improvements, and in retiring the debts of the company. Under such circumstances, a person living at a distance has a right to infer: 1st that the road has a good route, not injuriously affected by competing lines; 2d that it has been well managed; and, 3d that there is a good de-

gree of probability that the future of the company will be like the past.

It would be equally pertinent to take the case of roads that seem to be rolling in money one year, and have not a cent for any object the next—whose whole experience consist in violent alternations between a plethora at one time, and poverty at another. The average result for a period of ten years in such a case may be safely taken as that for the next ten, no matter what fine stories may be told, and however inimminent an *accidental* dividend, excessive in amount may appear to be. There is an universal proneness to believe that which we desire is certain to happen, and to paint the future of a road as a course of uninterrupted prosperity, simply because we wish it to be such; and to take the largest accidental dividend that may have been made, though years may have elapsed since its payment, as the annual or semi-annual rate for the future. It is this mode of reasoning that keeps up prices when little or nothing will ever be realized in the shape of dividends.

We have supplied the means of taking all such nonsence out of the public mind, all that is wanted is to be no wiser for the future than the past will warrant, and the past of each road we have given.

Politics and the Share Market.

The present condition of matters in our monetary and business circles is most extraordinary, and can only be explained and understood by reference to the national characteristics or habits of our people, and to the experience which we have gained of ourselves which leads us to put estimates upon our actions and their effects far different from those that foreigners would be likely to form.

The present panic expends its force upon railway shares, the value of which would be affected less than many other kinds of security by the event which is held up *in terrorem* over the market—the dissolution of the Union. The railroads, the shares of which are upon this market, are far removed from the scenes where any disturbance is possible. Their traffic cannot be appreciably affected in the event of the threatened catastrophe. Take the New York Central, New York and Erie, Harlem, and Hudson River. The traffic of these roads can hardly be lessened by any probable political event. Still their shares yield to the storm, as if it expended its full force on them alone.

Now if dissolution were regarded as possible in any contingency, would not such an apprehension tend to destroy the credit of the Government altogther? Suppose the people of England were to separate in a quarrel, and divide that country into two distinct nationalities. Would not the public debt of that country fall to prices merely nominal? Would not the well grounded apprehension of such an event produce a result somewhat similar, differing only in degree? Suppose the Chancellor of the Exchequer were to traverse that country visiting its leading towns and declare himself in favor of its separation into two different kingdoms, occupying hostile attitudes toward each other, and threatening in a certain event, though happening with all the forms of law and precedent, to cast his influence with one of the factions and do all he could to break up the existing government. What would be thought of such a proceeding? Were he backed by a large and influential party, would not such a course, not only unchecked, but permitted by the sovereign, produce a panic throughout the country, of which history does not furnish a parallel, because there have been no civil wars in the leading countries of the old world or the new, since science and art have so vastly increased the wealth and complicated the relations of society? Yet all this is done in the United States, without casting a shade upon their public credit, and without producing any stringency in the money markets of the great business centres. Amid all the clamor and threats that are so freely made, the most profound confidence in the permanence and stability of government seems to prevail, and in the continued easy condition of the money market. We suppose, notwithstanding, that property is the same sensitive thing here as elsewhere—the first to take alarm at the slightest cloud in the horizon.

All this must be very puzzling to foreigners, as it would be to ourselves, were we not so accustomed to big talk and to gasconade, that we really pay no attention to it. As anything like dissolution of the Union is regarded as such an unmitigated evil, no one believes it possible. The feeling is that the interest of our people will really control their action, and that anything prejudicial to it is sure to be avoided.

With regard to the ties that hold the States together, we have those of race, similarity of language, religion and history. These are natural ties, but we think that these have much less strength in this country than any other. The only one to be relied on is that of *interest*. The government, in its present hands at least, is a cypher. It does not attempt even to check the language of its officials, who are constant in their threats for its subversion. In this country, the action of government upon the personal liberty of the individual is scarcely felt. Its imbecility, if it may be termed such, in these matters, is pretty much in accordance with the notions of our people: still, even among ourselves it is felt that there is something due to self-respect and to official dignity, and that the functions of government should not be shared with a faction who seek to overthrow it. There is no doubt that the tone of the present administration falls far below the standard demanded by the country, both North and South.

With regard to the future we will predict nothing; but certainly, judging from the steadiness which everywhere prevails, except in railway shares, little apprehension is felt. The violent fluctuations in these is clearly referable to the disasters of 1857, which almost entirely destroyed confidence in this class of securities.

The recent advance in prices was based upon hopes for the future, rather than any well grounded conviction as to their substantial value. Nothing has occurred in the earnings or condition of our railroads to weaken the expectations of a better state of things. Our railroads were never doing better than at the present moment. But more time is required to demonstrate the reality of the apparent improvement. Till then we must expect to see railroad shares the most sensitive thing in the market.

Foreigners naturally make a great mistake in the notions they form of this country, in supposing that the General Government reflects the interests, character, ideas and habits of our people. Nothing could be wider of the mark. The Federal Government is one almost without any useful function. It neither constructs our highways, nor educates the people, nor administers justice, (except within a limited sphere), nor maintains the peace and order of society. It bears hardly any relations to the daily experiences of life. It is felt that the few duties it assumes, such as the transportation of the mails, would be much better performed by individual enterprise. As our people are entirely engrossed in peaceful pursuits, the best administration is one that leaves them entirely free. This fact is often but poorly understood. No administration is content with the performance of a merely passive *role*. Each wishes to distinguishes itself by some line of policy, or by the performance of some decisive action, calculated, as it believes, to make its mark in history. Meeting no response from the people, these grand schemes fall to the ground, giving to the Government every appearance of fickleness and instability. On the other hand society is more stable in this country than any other, because in each State it is felt that there is no legal grievance to be redressed. Another cause of stability is the great uniformity in the distribution of property. All these things must be taken into consideration in forming conclusions for our future, and should far outweigh the noise and declamation of excited politicians.

Interest and Dividends.

The Receiver of the New York and Erie Railroad is paying the November interest due on the Firt Mortgage Bonds of the company. The Chicago, Burlington and Quincy Railroad Company have declared a semi-annual dividend of 5 per cent., payable on the 15th November to holders of stock on the 31st ult. The net earnings of the road for the 6 months was 7¼ per cent. The books will be closed from the 1st to the 10th inst. The Concord, N. H., Railroad Company have declared a dividend of $2 per share, payable Nov. 1. The coupons of the Evansville and Crawfordsville Railroad Co., due Nov. 1, will be paid at the office of the Farmers' Loan and Trust Co. The interest coupons in the 1st mortgage bonds, and bonds of 1867 of the Harlem Road, will be paid on the 1st November, at the Treasurer's office. Holders of the bonds of the Mississippi Central Railroad Company will present the coupons due Nov. 1, 1860, to Andrew H. Green, No. 12 Wall street for payment. Holders of conpons of the City of Louisville, issued to the Louisville Water Company, due Nov. 1, 1860, will present them for payment on and after that date, at the Bank of America. The semi annual interest due 1st Nov. on the third mortgage and convertible bonds of the Hudson River Railroad Company, will be paid at the office of the company. The coupons due Nov. 1 on the sinking fund bonds of the Toledo and Wabash Railroad Company, will be paid at the company's office, No. 54 Exchange Place.

The Engineer.

It is due to our many friends, who have so liberally encouraged our enterprise, to state that the progress of THE ENGINEER has been one of uninterrupted success. It has everywhere met with the most flattering reception, and our only wish is that it shall deserve the praise it receives. —*The Engineer.*

STRATTON & CO.,

COMMISSION MERCHANTS,

No. 1 PINE STREET, N. Y.

AGENTS FOR

Bauman & Co.'s Poco Metallic Paint.

FOR WOOD PAINTING.—It retains a beautiful lustre; kills knots and will protect it under any circumstances. It covers 6,000 square feet per hundred pounds, and will neither fade, blister, or wash, and a better fireproof than any other Paint, for it will stand a heat that will melt lead. It is proof against sea, air and storms.

Refer to JOHN LEISENRING, Sup't and Eng'r, Lehigh Coal and Navigation Co., Mauch Chunk, Pa.

FOR BRICK AND PLASTER.—It makes all the fanciful stone colors, and will cover 4,000 square feet per 100 pounds. When laid out in blocks, it is truly beautiful.

Refer to SEMPLE & BROTHER, Easton, Pa.

FOR SHIP AND BOAT PAINTING.—It hardens under water to the hardness of Iron, preventing the ravages of the wood-worm effectually. On deck it is impervious to water, expands and contracts with heat and cold, and we warrant it on the forecastle six months.

Refer to CAPTAIN MASON, Schooner 'Adolph Ugel,' Philadelphia.

FOR RAILROADS.—It preserves Bridges and Ties from dry or wet rot and freight cars from burning and leaking.

Refer to R. H. SAYER, Sup't and Eng'r, WM. KELLOG, Master of Repairs, Lehigh Valley Railroad, Bethlehem, Pa.
A. G. BRODHEAD, Sup't and Eng'r, Beaver Meadows R. R., Mauch Chunk, Pa.

FOR ROOFING.—It covers 8,000 feet per 100 pounds, and may be used in the rain, as it never runs.

Refer to M. CULLOUGH & CO., HENRY BUCKWALTER, Philadelphia.

FOR IRON.—It will stand 300 deg. Fah. and gives satisfaction to all the Iron men in Philadelphia, on gas holders, steam boilers, Iron fronts and ornamental iron. It is equal to Red Lead, for steam and hot water joints.

Refer to J. W. and J. F. STARR, Camden, N. J., MORRIS, TASKER & CO., MERRICK & SONS, Philadelphia.

FOR IRON FOUNDERS' PATTERNS.—Five parts by weight of it to one of gum shellac dissolved in alcohol, will make a covering more impervious to the damp sand or loam than shellac alone of equal consistency.

Refer to THE NOVELTY IRON WORKS, New York.

FOR STAINING.—Oak, Mahogany, Rosewood and Walnut Stains for Furniture, we warrant it equal to Turkish Umber. Its natural colors are Umber, Brown, Lake, Olive and Lead color, which may be combined in endless variety. We hope soon to have other colors much lighter.

ANALYSIS.

DENNIS BAUMAN & CO.,
Parryville, Carbon County, Pa.

The following are the results of Analysis of your Poco Metallic Paint:—Peroxyde of Iron 55.84; Red Oxyde of Manganese, 1.65; Lime, 2.52; Magnesia 1.29; Alumina, 9.00; Silex, 29.70;—100 parts.

The Analysis proves that this paint is not likely to be altered in the slightest degree by ordinary atmospheric agents, such as sunlight, rain, cold, or heat. We therefore regard your Poco Metallic Paint as of the most durable character.

BOOTH, GARRET & REESE,
Practical and Analytical Chemists.

JACKSON'S
PREMIUM NON-CONDUCTING
FELTING

For Covering LOCOMOTIVE, STEAMSHIP and STATIONARY ENGINE BOILERS, STEAM and WATER PIPES.

NATIONAL FERTILIZER.

The attention of Agriculturists is requested to this ECONOMICAL and SUPERIOR **FERTILIZER.** It possesses all the good qualities of the best known manures, without any of the injurious effects produced by the over-active Ammonia in Guano and kindred FERTILIZERS, while its *price* is **less than one-half of the Peruvian** Guano. The various materials composing this Fertilizer, are so chemically combined, that they are gradually evolved by the heat and moisture of the earth, and furnish to the plant all the requirements for a **rapid and luxurious vegetation.**

[COPY.]

NEW YORK, Sept. 8, 1860.

I have used about one ton of the NATIONAL FERTILIZER manufactured under Dr. L. Harper's patent, on my sugar plantation in the Island of Cuba, and although tried upon very poor soil, realized a fine crop. I used it in the same way and in the SAME QUANTITY as I use Peruvian Guano. I can confidently recommend it as in every respect equal to Peruvian Guano for sugar cane.

D. DE HEVIERA.

RAILROAD IRON.

THE subscriber is prepared to sell AMERICAN and ENGLISH **RAILROAD IRON, CHAIRS, SPIKES, CARS** and **LOCOMOTIVES,** at the lowest market price, and securities taken in part payment.

B. F. FRENCH,
Cor. Nassau and Cedar Sts., N. Y.

C. J. SCHULTZ,

MANUFACTURER OF

Bridge Bolts and Draw-Bridge Castings.

Letterbox 1392. Pittsburg, Pa.

PATENT ASPHALTIC ROOFING FELT.

THE BEST, CHEAPEST AND

MOST DURABLE ROOFING KNOWN.

THE IMPROVED PATENT ROOFING FELT furnished by the Subscribers is entirely free from the objections hitherto urged against articles that have been furnished under similar names by various parties.

It makes a **light, cheap, durable,** and perfectly **Fire** and **Water-proof Roofing** for **Churches, Farm Buildings, Railroad Depots, etc.**

It forms the best and cheapest lining for Stores, Granaries, Barns and Wooden Buildings, as rats, mice and other vermin will not touch it.

It stands all climates and has been extensively furnished to the British Government for use in their widely scattered foreign possessions. The Turkish Government used large quantities of the Felt for roofing their hospitals and stables in the late war.

In this country first class dwelling houses have been roofed for three years with this Felt, and the owners who used tin now prefer this Roofing Felt.

Also an entirely new, superior and cheap **ROOFING CEMENT** for the above Felt and leaky tin roofs.

For Samples, Circulars, etc., apply to

EDMISTON BROS.,
No. 3 Bowling Green, New York.
N. B.—Agents wanted.

50 / 56 **RAILROAD IRON.**

ON ship board and ready for immediate delivery from ship Bernard direct from Wales by

THEODORE DEHON,
2t43 **10** Wall st., near Broadway.

TO CONTRACTORS.

PROPOSALS will be received by the Long Dock Company until November 3d, for excavating and loading in the cars of the Company, 500,000 cubic yards of earth, at the west end of the Bergen Hill Tunnel. For further information apply to J. HOUSTON, Assistant Engineer's office, Hudson City.

The Company reserve the right to reject any bid that may be offered.

Oct. 11, 1860. J. W. ALLEN, Engineer.

HISTORY
OF THE
RAILROADS
AND
CANALS
OF THE
UNITED STATES
OF AMERICA
EXHIBITING THEIR
Progress, Cost, Revenues, Expenditures
AND
PRESENT CONDITION.

By HENRY V. POOR, Esq.,
Editor of the 'AMERICAN RAILROAD JOURNAL.

Illustrated by large and elegant Maps.

THIS work, which is the first of its description ever issued, and which traces the history of AMERICAN RAILROADS AND CANALS through their varying fortunes from the earliest period to the present day, has been written under peculiarly favorable circumstances, whether in relation to editorial experience, or the possession of the material necessary for the proper illustration of the subject, and on these accounts claims a reliability as to facts and deductions which under other auspices could not have been obtained. It is based principally on official reports published from year to year, and which for the past THIRTY YEARS have been accumulating in the office of the AMERICAN RAILROAD JOURNAL. To collate these, and present the essential facts relating to each enterprise, has required patient research and persistent labor. The result has been more successful than could have been anticipated under any circumstances—the general history, the progress of construction, the financial movements and the business operations of every road and canal in the United States being given in detail, the aggregate of all summed up and the averages deduced. The present condition of each work is elaborately set forth in full descriptions of property, share capital, bonds and other evidences of debt, etc., etc.; and the several departments of the subject are so carefully classified and arranged that comparison is rendered easy. The publishers, indeed, have no hesitation in presenting the work to all interested in internal improvements as complete and accurate in every respect—one that in reviewing the past lays the foundation for the future, and which is indispensable alike to the merchant, the banker, the contractor, and indeed to all who invest capital in railroads or canals.

The work will consist of THREE volumes royal 8vo, and be illustrated with a series of large **MAPS** specially drawn to accompany these volumes.

The **first** volume, embracing the States of MAINE, NEW HAMPSHIRE, VERMONT, MASSACHUSETTS, RHODE ISLAND, CONNECTICUT, NEW YORK, NEW JERSEY, PENNSYLVANIA, DELAWARE and MARYLAND, **is now ready for delivery.**

The **second** and **third** volumes, the one embracing the WESTERN, and the other the SOUTHERN STATES, are now being prepared and will be issued at an early date.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.				SHEET No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft. Slop.		1½ to 1
2.	For Side Hill Cuts and Fills.			14.	" 20 "		1½ to 1
3.	Base 12 ft. Slopes		1½ to 1	15.	" 24 "		1½ to 1
4.	" 14 "		1½ to 1	16.	" 25 "		1½ to 1
5.	" 15 "		¼ to 1	17.	" 26 "		1½ to 1
6.	" 15 "		1 to 1	18.	" 28 "		¼ to 1
7.	" 15 "		1½ to 1	19.	" 30 "		1 to 1
8.	" 16 "		¼ to 1	20.	" 30 "		1 to 1
9	" 16 "		1 to 1	21.	" 30 "		1½ to 1
10.	" 18 "		½ to 1	22.	" 30 "		1½ to 1
11.	" 18 "		¾ to 1	23.	" 32 "		1 to 1
12.	" 18 "		1 to 1	24.	" 38 "		1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

ANDREWS' PATENT

Centrifugal
PUMPS

ARE the best and cheapest Pumps made for **RAILROAD STATIONS, MINES, FACTORIES, TANNERIES, PLANTATIONS, DRAINAGE, IRRIGATION, WRECKING,** and general use.

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST.,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 43

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

Mineral Resources of North Carolina, Deep River Improvements.

The improvement of the navigation of the Deep River was commenced many years ago. It originated with a company of capitalists, who, after expending a large amount of money, were forced to abandon the work, sacrificing what they had already expended. What had already been done was sold at auction, the State becoming the purchaser. In April, 1859, ELLWOOD MORRIS was appointed chief-engineer of the work, and directed to make an accurate survey of its condition, and the cost of putting it in successful operation. This was immediately done—the estimated cost, $89,000, promptly appropriated, and since that time every available resource has been employed to bring it into use.

In the improvement of the navigation, it has been necessary to construct nineteen locks, with of course a corresponding number of levels, for slack-water navigation, varying in length from one to twelve miles. The channel thus created varies in depth from eight to twenty feet, and has a breadth of from five hundred to one thousand feet. The capacity of the locks are sufficient to pass boats of one hundred and twenty-five tons, and the entire navigation is well adapted to the use of tugs and barges.

In anticipation of the probable completion of this improvement, and the facilities it would afford for transporting minerals and mineral products from the basin of the Deep River to the seaboard, so along ago as 1854 some gentlemen turned their attention to the value of the deposits described by Professors OLMSTEAD and EMMONS, and since found to be correctly laid down by Capt. CHARLES WILKES and Chief Engineers MARTIN and HUNT, of the Navy.

In 1858, on a call of the Legislature of this State, Mr. WILLIAM GEMMELL, of Glasgow, Scotland, who had visited the mineral lands, presented to that body a written report of his own personal observations. Mr. GEMMELL is widely known as a practical iron-worker, and had visited the iron deposits for the purpose of comparing them with deposits of a similar character, of which he had experience in his native country.

After briefly describing the country, the extent of the coal and iron formations, the means of access, &c., Mr. GEMMELL adds: "I found the region exceeded in value and importance to the representations made to me." He then sums up the results of notes, as made during the progress of his examination:

FACTS REGARDING THE UNIVERSAL DEPOSITS IN CHATHAM COUNTY, N. C.

1. The coal is of a quality equal to the best Newcastle, and the best for making gas, for which purpose it would bring in New York from $6 to $7 a ton.

2. It is very easy to work and free of faults.

3. It is admirably suitable for smelting iron, being free from sulphur.

4. Blackband iron ore overlies and underlies the coal, and can be mined from the same pits and openings.

5. The Blackband is in deposits eighteen inches and six feet thick, and of a better quality than any found in Scotland, containing such a large proportion of bitumen, and of so peculiar a character, that from twelve to sixteen gallons of Kerosene Oil can be extracted from it while it is being calcined, to fit it for the blast furnace. Six to sixteen inches is the usual thickness of the blackband iron ore in Scotland.

6. Hematite iron ore, clayband, and also magnetic iron ores, are in enormous deposits within ten miles of the Blackband and Coal.

7. Pig iron can be made from the above deposits of a quality superior to any made in Scotland, in any quantity, and at a price less than in Scotland; the proximity of the minerals to each other more than compensating for the higher wages paid for mining.

8. The Deep River flows through the region, and its products can be conveyed to the seaboard from $1 to $1 10 per ton.

9. The lands can be procured at prices not much higher than agricultural lands, and every acre of the mineral land is, I consider, worth ten acres of the "Big Vein" coal lands in Cumberland. It may be called a virgin region.

Being requested by the Committee of the Legislature to give them at length his opinions as to the practicability of working the minerals he had described, so profitably as to indue capitalists to embark in the enterprise, and by the products of the mines pay a revenue to the State, in the form of tolls on the river improvements, Mr. GEMMELL addressed a second letter to the Legislature, in which he was at some pains to present not only his conclusions, but to detail the facts which had led him to his conclusions. Omitting the arguments, I copy the estimates he presented:

MANUFACTURE OF PIG IRON.

"I confine myself," says Mr. GEMMELL, "exclusively to the manufacture of pig iron, and from my knowledge of the manufacture of it in Scotland, I speak with confidence of the cost of its production from similar materials I saw around me in my tour of inspection.

It will take 4 tons of blackband ore (raw) to make 1 ton of pig, at a cost of say 60 cents per ton	$2 40
It will take 2¼ tons of coal to melt, heat the heaters, and fire the engines, say at 60 cents per ton	1 35
Limestone, for flux, say 10 cwt. at $3 per ton.	1 50
Labor at furnaces, engine, &c., (50 per cent. more than in Scotland)	2 00
Incidental charges, wear and tear, interest, salaries, &c.	1 25
The pig-iron would not cost over, per ton	$8 50

Furnaces erected on Scotch principle are capable of each making 200 tons per week; this is the usual make of Scotch furnaces with the latest improvements to make iron from blackband ore, and it far exceeds in quantity the produce of any furnaces on this Continent, and also the produce of furnaces in other parts of Europe, where they are not blessed with the blackband.

The consequence is that Scotch pig iron costs less than any produced in the world. But in Chatham County, the proximity of the coal to the ore is more favorable than in Scotland; and there a lordship is paid for the coal, of 6d. to 1s. per ton., (12 to 24 cents,) and for the blackband a lordship varying from 2s. 6d. to 7s. 6d. sterling per calcined ton. These two facts far more than counterbalance the extra price that will be paid for white labor, and therefore pig iron can be made cheaper in Chatham County than in Scotland.

To manufacture pig into railroad, or merchant bars, costs with us, (in Scotland,) including profit

to manufacturer, about, in round numbers, double the price of the pig—that is to say, if a manufacturer pays 60s. per ton for his pig, he can afford to sell his bars, with a handsome profit, at £6 per ton, provided he does not pay more than 4s. to 4s. 6d. per ton for his coal. In Chatham County the coals can be mined for sixty cents per ton, and bars can therefore, in my opinion, be made much cheaper there than in Scotland.

For reasons I stated to you verbally, I would not choose to identify myself with any other branch of iron manufacture than pig, although all the other branches which will grow out of the supply of pig iron—such as bars, plates, rods, locomotives, &c.—will hold out most tempting inducements to people from Pennsylvania, &c., to locate themselves with their capital where they will find such *cheap* and good iron and coal. Then the command of cheap pig will attract founders to the region for manufacture of pipe and other castings. In Glasgow a founder does a good business if he pays 60s. for his pig, and gets 85s. for his large pipes. Brooklyn is using, just now, 30,000 tons of water pipes, for which the corporation pays about $41 per ton. These could have been made in North Carolina at $8 per ton for the iron, and $6 to $7 per ton for casting—say $15 per ton."

These, it will be recollected, are estimates made from close observation some time ago. Since they were presented to the Legislature, extensive works have been erected, and the business of manufacturing iron and oil, and mining coal for market, is being extensively prosecuted by several companies, prominent among which, for the extent of its operations and the capital invested, is "The Cape Fear and Deep River Coal and Iron Company."

I made a careful examination of all the works, and shall at an early day forward you the results which I obtained. They will be curious as showing the enterprise which has penetrated the interior of our State, and which is beginning to be felt in every branch of our home industry. They will be more curious in another respect—that they show Mr. GEMMELL's estimates to have been far below the actual facts—the cost of producing and the extent of the products being so much below and so much above his figures as to tempt the belief that he was an inexperienced tyro instead of the careful, practical and scientific mechanic he is known to be.—*Raleigh, N. C., Cor. of the N. Y. Times.*

Baltimore and Ohio Railroad Extra Dividend Question.

OPINION OF HON. JUDGE GILES.

William E. Pearce and Charles Sinnickson vs. *The Baltimore and Ohio Railroad Company.*—In the Circuit Court of the United States (Oct. 11) for the District of Maryland, in Equity.—Bill for an injunction to restrain the Company from paying the extra dividend declared December 17th, 1856.

The bill states that the complainants, one of whom is a citizen af New York and the other of Pennsylvania, are the holders and owners of twenty-two shares of the capital stock of the Baltimore and Ohio Railroad Company.

The defendant was incorporated by the act of the General Assembly of Maryland, passed at December session, 1826, ch. 123, and that by the 19th section of said act of incorporation, the President and Directors of said company were authorized annually or semi-annually to declare and make such dividends as they might deem proper of the net earnings arising from the resources of the said company, after deducting the necessary current and probable contingent expenses.

That defendent was incorporated to make a railroad from the city of Baltimore to the Ohio river; that said company constructed a road, for the most part by a single track to the said river, to which place it was opened in April, 1853.

That the capital originally authorized by the act of incorporation, and that authorized and provided by its supplements, proved wholly insufficient for the construction, &c., of said road; and that the said company did from time to time, prior to the 17th of December, 1856, lawfully use and apply the receipts and revenues of said road as it progressed, to the further construction thereof, and keeping the same in repair, and that in addition, the company was compelled to borrow large sums of money, amounting in the whole to more than ten millions of dollars, which they expended in the construction and equipment of said road, and in keeping the same in repair, and for the payment of which the revenues, receipts, property and credits of said company stand pledged. The bill further charges that, notwithstanding all this, the President and Directors of said company, pretending that there were at the time large sums due by the said company to their stockholders as net earnings accruing through many years, and not already divided, but used for the corporate purposes of said company, did, on the 17th December, 1856, at a meeting of said President and Directors, adopt the following resolutions, to wit:

"*Resolved*, That an extra dividend of thirty per cent. be declared on the stock of the company, to be paid on or after the 12th day of January next, to all stockholders owning stock on the 22 day of December, 1856, in certificates of indebtedness, bearing an interest from the 1st day of June, 1857, of six per cent. per annum, payable half-yearly, on the 1st days of December and June in each year, until the 1st day of June, 1862, inclusive, after which the said certificates of indebtedness shall be converted into the stock of the company at par."

The bill further charges that there was not, at that time, any such amount of net revenue properly divisible among the stockholders, but that said pretended amount was made up, by omitting to charge against the revenue large sums of money laid out and expended in the reconstruction and repair of said road, and absorbed in commissions and expenses incurred in the sale of the company's bonds, and also by embracing in said amount of pretended profits charges for the transportation of iron and other materials used by the said company over their own road, and also by estimating amongst its assets various sums of money let by said company to corporations and individuals wholly unable to pay the same.

The bill further charges that, in fact, there was no agreement between the said company and its stockholders in relation to the net earnings, so used from time to time by said company, which justified or rendered valid the declaration of said dividend of 30 per cent.

The bill further charges that said resolution of the 17th December, 1856, was not passed by the said Board of Directors in conformity to the charter of said company; but that the twelve stockholder directors held a private meeting before the passage of said resolution, and agreed that upon the question of said extra dividend they should vote as the majority of said twelve directors should decide, and that any one not consenting to this should resign—and that by this measure, the said resolution of the 17th December, 1856, was passed; and it could not have been passed if each director had been left to vote on it according to the dictates of his own judgment. The bill then refers to the various bills heretofore filed against the said company in the Circuit Court for the city of Baltimore and one in this Court, in reference to said extra dividend, in which it charges that the company filed answers denying the validity of said dividend, and insisting that the same was made under a mistake and without warrant of law. And that notwithstanding said admissions and defenses so set up and relied upon, the said Board of Directors of said company did, in the month of December, 1859, pass certain resolutions instructing the counsel of said compauy to maintain the validity and legality of said dividend. The bill further states that the complainants purchased their stock during the pendency of the litigation in reference to said extra dividend; and the complainants claim to have the right to rely upon the answers of the said company, denying the legality of said dividend. And the bill concludes with a prayer for an injunction and for an account and discovery as to the receipts and expenditures of said company prior to the 17th December, 1856.

The defendant, in the answer filed, admits that the complainants are stockholders for certain shares of stock purchased by them in December, 1859. It states that the capital stock proving insufficient for building the road, they contracted loans from time to time, amounting in all to between ten and eleven millions of dollars—which were exclusively used for the purposes of construction—and that said company has not yet failed to pay the interest and principal of said loans, according to the terms of the same, whenever either became due.

But that further sums became necessary for construction, the said company, instead of effecting additional loans by mortgages upon the property of the corporation, took from time to time the net earnings of the said road; that is, the amount left after deducting from the gross revenue all expenses properly chargeable thereto.

That the amount of the funds thus diverted from the stockholders was at all times known, inasmuch as the account of net earnings had always been kept separate and distinct on the books of the company, and had at no time been confounded with the capital.

That at the time said net earnings were used, it was always the intention of the company, as made known by its acts and the public declarations in official documents of its officers and Board of Directors, to return said net earnings to the stockholders at some future time,

The answer futher states that the company have at different times returned to the stockholders a portion of the net earnings so used in the construction of their said road, some in the shape of stock and scrip, and some partly in cash and partly in scrip. And that course was acquiesced in by the stockholders, and the dividends so declared received by them without objection, except in one case, in which the State of Maryland as a stockholder refused to receive the dividend so declared in 1846, and insisted that the company was bound to pay the State its whole dividend in cash. Suit was brought by the State against the company for the dividend as a cash dividend, and the Court of Appeals, to which tribunal the case was ultimately carried, decided first—that the company had the right to apply the net earnings to the construction of their road; and second, having so appropriated them, intending at the time to return them to the stockholders, there was nothing in the charter which would prohibit the company from refunding the amount thus used by them to the stockholders.

The answer further states that in 1852, after the opening of the road to Wheeling, in the annual report of the President and Directors reference is made to the obligation of the company to return these net earnings to the stockholders, as soon as the condition of the company would justify such action, and that in October, 1856, at a general meeting of the stockholders, it was resolved, without a division, that the President and Directors of said company be requested to make provision for refunding to the stockholders, in such form as they may deem judicious, the said net earnings of the company used and expended on objects of capital.

That on this suggestion, the President and Directors proceeded to ascertain what amount of net earnings had been used for the purposes of construction, and, in the fair and honest exercise of the powers vested in them by their charter, passed the extra dividend resolution of the 17th of December, 1856. That, at the time said extra dividend was declared, the books of the company showed its revenues from all sources from the 22d May, 1830, to 30th September, 1856, were..... $28,991,118

And that there had been expended during the same period, in payment of expenses, including repairs, interest and dividends of all kinds, the sum of..... 23,856,073

Leaving the sum of..... $5,135,045

of net earnings which had been used in construction. That from this sum the company deducted

the sum of $1,008,012, being the amount of debts and subscriptions to stock considered as temporarily unavailable—leaving the sum of $4,127,033—of which amount the extra dividend distributed to the stockholders the sum of $3,000,000—being thirty per cent. on the capital of the company. That at the time said extra dividend was declared, there was more than the amount thereof, not returned in any shape to the stockholders, of net earnings used in the construction of the road, and that it had always been the intention of the company, when it could do so properly, to return the same to the stockholders; and the answer denies the allegations of the bill in reference to the manner of stating the account by which the net earnings were ascertained; and, also, that it was made up by charges for the transportation of materials over the road for the use of this company.

The answer further states that as far back as 1836 the company avowed its intention to return the net profits used in the construction of the road to the stockholders at some future day; and that this intention was shown by the various dividends made since, as well as by the repeated declarations of the President and Directors in their annual reports to the stockholders. The answer further sets forth that the said extra dividend was declared by a majority of the whole Board of Directors, and was legally declared; and denies wholly the statement of the bill in reference to any agreement between the stockholders, controlling their vote on the question of the extra dividend. The answer then states the pendency before the Circuit Court of Baltimore city of the cases of the Mayor and City Council of Baltimore and the State of Maryland against this company, in which the question of the legality of this extra dividend is directly involved and as the cases were instituted before the filing of the bill in this case, the company pleads the same as a bar to any further proceeding of this court in the premises.

It then accounts for the inconsistencies in the several answers filed by the company in the State Courts, by the fact that at one time those in the direction of said company opposed to the extra dividend obtained a majority of said board to unite with them, and so instructed the counsel of the company to file the answers which are now relied upon by the said complainants.

And with the answer are filed four exhibits, giving the facts, of which a discovery was prayed in the bill, showing the items from which the net earnings are ascertained, the votes and proceedings of the board in reference thereto; the loss in the sales of bonds and charges of transportation, &c. Now, it is on this bill, answer and exhibits that this motion for an injunction is heard. * *

What facts are then settled for all the purposes of this motion? That this company, through a series of years, from 1830 to October, 1856, used their net revenue for the purposes of the further construction and stocking of their road, and did so with the intention to return the same to the stockholders when, in the opinion of the President and Directors, the finances of the company would warrant such a step; and that in exhibit A we have the balance sheet from which we are to ascertain the true amount of net revenue; and in the answer and in exhibit B, the evidence of the company's intention to return to the stockholders the net revenue so used. Now, I admit that if the answer and exhibit filed with it are contradictory, we must take the facts to be as the exhibits present them. For the allegations of the answer are general and the exhibits specific and in detail. Then, looking at exhibit A, we find a tabular statement of the *whole revenue* of this company for twenty-seven years, ending 1st of October, 1856, making it for that period $28,961,118; we have also a statement of all the expenses, repairs, interest and dividends during said period, amounting to $23,856,073, which deducted from the gross receipts, leaves a balance of $5,105,045 as net profits. Now from this balance:

The Company, before making the extra dividend, deducted the three items to be found on page 56 of exhibit B, as it considered them at that time unavailable assets—to wit: Loan to Central Ohio Railroad, $400,000; loan to Northwestern Virginia Railroad Company, $573,012, and subscription to the Pittsburg and Connellsville Railroad Company, $35,000—making in all the sum of $1,008,012; which sum, deducted from the aforesaid balance of net profits, leaves the reduced amount of $4,097,033 for a dividend among the stockholders. But the solicitors for the complainants contend that further deductions should be made from this balance of the following items, to wit: Interest due from Central Ohio Railroad Company.... .... $41,371
Sinking fund.... 489,086
Losses on sales of Bonds. 834,123
And charges for Company's own freight.. 87,243

The first item had never been charged in the gross receipts of the said Company, as shown by exhibit A, and, therefore, formed no part of the balance of net profits stated above. The sum advanced to said company was $400,000. And this sum, and this alone, was the proper deduction to be made for that item. The next item is the sinking fund. I am of the opinion that this sum should be deducted, as it is taken from the annual income to provide a fund for the payment of the bonds of the Company when they shall arrive at maturity.

The next item, amounting to the sum of $834,123 04 being the loss on the sale of the bonds which were sold to raise funds for the making of the road, I should think, ought to be charged to construction and not to annual expenses. And the face of the bonds should therefore represent the cost of the work. In the case of the People vs. Michigan Southern and Northern Indiana Railroad, 4 Michigan Reps. 398, this point came before the court. The company was bound by its charter to pay a tax to the State on its capital stock paid in, and also on all loans made to the said Company for the purpose of constructing their road, &c. The Company objected to the tax on several items, one of which was the sum of $183,459 84 discount on loss on the sale of the bonds issued by the Company for loans made for construction. But the court held that the amount of the bonds showed the amount of the loan, and that the loss of discount on the sale of them ought not to be deducted.

The last item of $87,243 ought not, in my opinion, to be deducted, as it formed no part of the gross receipts in tabular statement A. It is just as proper a charge to construction as the cost of the iron and other materials for whose carriage it is charged. But suppose I am wrong in reference to the third item, and that that item should also be deducted, how will the account stand? The net balance, as I have shown, was $4,097,033, from which deduct the sinking fund and the loss on the sale of bonds, and you would still have a balance of $2,773,910 for the dividend, within a little over $200,000 of the amount divided. And yet with this small difference, and that doubtful, I am called upon to suspend the payment of the large sum of $2,773,910. What equity would there be in such a proceeding, when the President and directors are not undertaking to waste the funds and withdraw them from the stockholders, but to divide what they believe to be net profit among them? With the policy or impolicy of this extra dividend I have nothing to do. Whether the stockholders prefer that each share of their stock shall be the ten thousandth part of the capital, or the thirteenth thousandth part, is a matter for them to settle among themselves. And they must be taken to have settled that, in the resolution of December, 1856, which has never yet been rescinded, but which they could have rescinded at any time by the election of a board favorable to that course. Nor can the stockholders be prejudiced by the various and contradictory answers which the President and Directors have filed in the different causes mentioned in the bill and answer in this case. From the passage of the extra dividend resolution, if legal, each stockholder had a vested interest in the dividend declared to his share or shares, which could not be impaired or prejudiced by any conduct of the President and Directors, short of a fair and honest repeal of the resolution itself if that power remained with them. * * * * * * * * * *

These cases are therefore conclusive, as I have before shown, that the interests of the stockholders are directly involved in the case, and with regard to some of them, they could not be made parties without defeating the jurisdiction of the court. But these complainants, if they have an equity, are not left without remedy.—They can bring their case before the courts of the State, where all interested in the decision of the cause can be made parties, and where all can be heard and full justice done to all. I will, therefore, sign a decree dismissing this bill without prejudice, but with costs to the defendants.

Iron Trade of Pennsylvania and the United States.

The present condition of the American iron trade is far from being a fair representation of the natural strength of that part of it which properly belongs to the trade of Philadelphia. At the height of the financial difficulties of 1857, nearly all the iron works were compelled to suspend operations, temporarily or permanently, and though they were very soon resumed in many cases, the majority continued silent through most of the year 1858. Many which were so long stopped are now resuming operations, however, and it is believed that the production of the anthracite districts of the Lehigh and Schuylkill will soon be as large as at any former time.

The following tables are from the report of the Secretary of the American Iron Association. The summary shows the distribution of the iron business of the country, in all its departments, and though the latest full tables prepared are for 1856, the proportion of the total production falling to Pennsylvania, is increased rather than diminished in 1857 and 1858. In both these years the furnaces of the Susquehanna, Schuylkill, and Lehigh anthracite regions sustain their production much better than any others in the United States, and the chief rolling mills of the State are also far better sustained than any elsewhere. The aggregates for 1856, in the production of anthracite and charcoal pig iron, and of the rolling mill product, very forcibly exhibit the leading place Philadelphia and the State have in the entire business:—

Product of—in 1856	In Penn.	All other.	Total.
Anthracite pig iron—tons	306,972	87,537	394,509
charcoal " "	96,154	252,700	348,854
coke " "	39,953	4,528	44,481
bituminous coal	8,417	16,656	25,078
Total pig iron	451,496	361,421	812,917
Product of rolling mills	241,484	256,597	498,081

Pennsylvania has thus 90,000 tons of pig iron more than all other parts of the Union together, and its anthracite iron falls but 50,000 tons short of the production of all the other States. This anthracite production is all so near Philadelphia as to belong in a peculiar degree to its trade.

For the purpose of adding to these the most recent results in regard to the production of the leading districts, there has been obtained from the proprietors of several of the leading anthracite furnace works their production for 1857 and 1858, and the like facts from several of the leading rolling mills. In the Lehigh district most of the furnaces have continued in full blast through the whole period of disaster to the trade generally, the demand of their iron, which is of superior quality, and has almost entirely displaced the Scotch pig for the use of founders, being such as to keep them steadily employed. The Schuylkill district is next to the Lehigh in the character of its iron and the quantity produced, but the furnaces are fewer in number and the works smaller. Many of these have remained suspended through most of the year, 1858, but all are now resumed or preparing to resume. Ascending the Schuylkill, we find more than half the number of anthracite furnaces out of blast during 1858. One of the "Wm. Penn" furnaces was out; the "Spring Mill" furnace was out half the year; the "Me-

rion" out until April; the "Swede" furnaces both out, one of these having resumed in February last, and the other soon to resume; the "Norristown" furnace wholly out, as also the "Montgomery," at Port Kennedy; two of the four "Phœnix" furnaces; one of the "Henry Clay" works at Reading, and that of Seyfert, McManus & Co., at Reading, with perhaps three or four more of those beyond Reading. The production of fifteen of the twenty-two in the Schuylkill district, in 1857, as reported to the Iron Association, was 48,310 tons, the whole not exceeding 60,000 tons. In 1858 the number out of blast must necessarily have reduced the total to 40,000 or 45,000 tons.

The anthracite furnaces of the Susquehanna have been fully as much reduced in production, through 1858 if not more. In 1857 those on the main Susquehanna and on the North and West Branches, together, produced, for 25 furnaces heard from out of 46 in existence, 75,759 tons against 79,188 in 1856. A large share of those not reporting were not in operation, and the total did not reach 100,000 tons. In 1858 the production did not probably exceed 55,000 tons. The Bloomsburg furnaces, however, produced the same quantity as in 1856, but less than in 1857.

The Lehigh district sustained its production much better. Of the twenty furnaces in blast in 1857, but two or three were suspended in 1858. Several of the furnaces were out of blast for a part of the year, but the Crane Iron Company, the Allentown, the Thomas or Hockendaqua, the Glendon, Cooper, and other works, were quite generally kept in full operation. The production of four of the leading establishments of this district have been communicated by the proprietors, and these exhibit a decline of but about 5,600 tons from 1857, and about 7,000 tons from 1856.

Extending the table subsequently given from the Secretary of the Iron Association, to embrace 1858, we have the following comparison:—

ANTHRACITE PRODUCTION FOR THREE YEARS.

	1856.	1857.	1858.
In the Lehigh Valley, 20 out of 24 furnaces	121,021	113,299	100,000
In the Schuylkill 15 out 22	43,275	48,310	35,000
Along Susqh'na 25 out 48	79,188	75,759	50,000
Tot. for furnaces reported	286,160	281,980	185,000
Actual total for 1856, and comparative totals for 1857-8	306,972	300,000	200,000

The proportions, of course, are not full in case of the furnaces not making returns for the last two years, since the majority were out of blast and making no iron, at least during the larger share of 1858.

The productiveness of the Anthracite Iron Works of Pennsylvania is illustrated by the following statement of the actual operations of the Lehigh Crane Iron Company's Works for the past three years, the leading establishment of the country, and probably the most productive in the world. The statement is obligingly furnished from the office of the company, and its separate publication is permitted at the request of the Philadelphia Board of Trade. The whole number of furnaces at these works is five, and the full capacity of works 45,000 tons of pig iron per annum:—

Number of furnaces in blast.....4	2 full. 1856. 2 part of year.	1 full. 1857. 3 part of year.	1858.
Aggregate production.....tons	31,094	30,943	28,870
Tons of coal used in furnaces and mines	67,900	66,500	60,800
Tons of ore used...	69,600	71,300	67,100

Far the larger share of the rolled iron, both bar and railroad, which is manufactured in the United States, is made in Pennsylvania, and most of this share within reach of the business of Philadelphia. The amount of railroad iron made by works of the State in 1856, in comparison with the total for the entire United States, is thus stated by the secretary of the American Iron Association:—

	Tons rails.
Pennsylvania rolling mills.....	83,834
All others.....	57,721
Total rails rolled.....	141,555

The Trenton Mill, New Jersey, rolling about 13,000 tons in 1856, really belongs to the account of Pennsylvania rolled, in a great degree.

The production of rolled iron in Pensylvania has of course fallen off during 1857 and 1858, as in the case of pig iron, but the natural strength of the establishments is strikingly shown by the degree to which the manufacture has been sustained under the heavy disadvantage now existing. The following is the aggregate of two establishments for 1857 and 1858, in comparison with the product 1856—the Phœnix Iron Company's Works, on the Schuylkill, and the Cambria Iron Works, at Johnstown, Pa., both of which are owned and controlled in Philadelphia:

	1856.	1857.	1858.
Product of the rolling mills named.....	31,798	34,599	43,278

The production of the Lackawanna, Montour, and Safe Harbor Mills, is not known. Several other mills in Pennsylvania have been altogether silent during most of the year 1858, and the aggregate produced in the State is probably not more than two-thirds the product of 1856, and it may not exceed half that product. Considering the great natural extension of demand, and the increased capacity of the works, this is a striking proof of the severe pressure existing on this, as on every other branch of the iron-producing interest. The report of the Iron Association on this branch of the iron trade is extremely valuable, and quite full on all other points relating to the production of railroad iron.

There are several rolling mills for plate, boiler, and bar iron located within the city limits, and others in the vicinity are controlled by Philadelphia business houses. In every branch of manufacture, except perhaps nail making, the iron worked there is in proportion to the production of pig iron. The mills rolling steel, plate, and bar iron have been generally more active during the past year than the rail mills, and they are now as fully employed as at any time in 1857, previous to the financial difficulties. The deficiency in production during the year of least activity, leaves the market bare of many descriptions of small iron, and the present activity is in part induced by this unusual demand. The mills of the city, and those of the vicinity represented there, are particularly distinguished for steel rolling, in part from English bar iron, and for the finer grades of sheet and plate iron. The sheet iron closely approaches the Russian in quality, and it is largely used for all the purposes to which that is applied.

Several of the mills are adapted both to rolling and forging, and others are constructed for forging alone. The Pencoyd Works execute forging more largely than rolling; the Fairhill Forge, and Norris' Locomotive Works are the principal forging works in the city itself. The Reading Steam Forge conducts heavy shaft forging exclusively. There are several other works at which more or less of this heavy axle and shaft forging is done, all of which is quite distinct from the bloomery forging of the primary class of iron works named in the report of the Iron Association.

In other parts of Eastern Pennsylvania, as we are informed by the Iron Association, there are, including the rail mills, no less than thirty-eight additional rolling mills, which roll railroad iron exclusively.

Of other rolling mills, there are seven at and near Coatesville, Chester County, four at and near Reading, one at Pottsville, two in Lancaster County, three at and near Harrisburg, one at Weissport, two at Williamsport, five near Bellefonte, etc.

The production of the steel, sheet and bar mills of the city and vicinity was in part made up, for 1856-7, from the best information obtainable, though the mills located at any considerable distance were not included. The following numbers are close approximations to the annual production:—

Spring and cast steel.....tons	2,500
Bar, rod, and band iron, in the city.....	13,500
Bar, nails, and axles, in towns near.....	15,500
Boiler and other plate, in the city.....	2,500
" " in towns near.....	22,000

The production of sheet and plate iron is largely increasing over that of 1856-7, in the current year. Not only is the production of several mills on the border of Maryland and Delaware now carried there, but there is additional machinery employed in rolling this description of iron in and near Philadelphia. Its increased use for roofing purposes adds to the demand.

In towns of Eastern Pennsylvania, more distant than Norristown, Phœnixville, &c., the Iron Association reports as made, in 1856—

Boiler and other plate.....tons	2,190
Bars, rods, and nails.....	13,500

Taking all together, we have the following aggregate:—

Plate, sheet, and boiler iron.....tons	26,690
Bar, rods, band, and nails.....	42,500
Steel.....	2,500

The aggregate value of this production is very nearly $5,000,000.

The entire quantity of railroad iron made in Eastern Pennsylvania, exclusive of the Cambria and the Juniata works, in 1856, is stated by Mr. Lesley at about 65,000 tons. Probably the depression of 1858 reduced the production to a point not far from 50,000 tons, or to about three-fourths the business of 1856. This branch of the rolling mill operations is thus placed at about half the value of the small iron rolling interest of this part of the State at these sums, which, together, give an aggregate of $7,500,000, as the value of all the forms of rolled iron furnished to the uses the country by the business circle belonging to Philadelphia. To include the Cambria Works would add largely to the aggregate of railroad iron.

James River and Kanawha Canal.

Referring to the proposed sale of the canal to the French Company, the President in his late report says:

"Upon this subject, the Board have but little additional information to communicate. Advices are daily expected from France. Since your called meeting in August the French Consul has received another dispatch from the Minister of Foreign Affairs of his government, recommending the scheme of Messrs. Bellot des Minieres, Brothers & Company to his care, and requesting him to lend to them all the moral support which may seem to him to comport with their design. In Virginia, the indications of public sentiment are at once decided, and singularly unanimous in support of the scheme. The prospect of the immediate completion of the canal, through the agency of the proposed Virginia Canal Company, appears to be everywhere received with satisfaction. A brilliant future for Virginia is generally anticipated from the development of the mineral agricultural, manufacturing and commercial resources which the completion of the canal would bring about; and this, too, not only without adding to the burdens of the State, but with immediate actual relief to the public finances, and all the material advantages which would result from the expenditure of so large an amount of foreign capital as would be required, to say nothing of the demand for labor, provisions and supplies necessarily incident to such an undertaking. The subject, indeed, seems to have expanded to national interest, since many of the most intelligent and influential journals of the country have noticed it with expressions of pleasure, if friendly to the end proposed, or of detraction, if influenced by a spirit of rivalry.—In short, no one doubts that the speedy completion of the James River and Kanawha Canal, upon an en-

larged and improved plan, is of immeasurable importance to the power and prosperity, not of Virginia only, but of the whole South."

Finances of Georgia.

The following statement of the financial condition of this State at the close of the financial year, Oct. 30, 1860, is from the report of the comptroller:

The cash balance in the treasury is ..	$274,820 64
Deduct undrawn appropriations.....	241,727 94
Leaving a net surplus of.....	$33,092 60

GOOD ASSETS OF THE STATE.

The Controller states that the good assets of the State amount to $807,025. In those assets he does not include the Western & Atlantic Railroad, which belongs to the State, and which paid into the Treasury as net earnings in 1859, $420,000, and in 1860, $450,000.

The receipts into the Treasury for the past year, from taxes, net earnings of State road, bank dividends, and all sources, amount to $1,453,930 78. The expenditures for all purposes were $1,179,110 24, leaving a balance of $274,820 54.

A table showing the total value of the various items of taxation in Georgia in 1859 *and* 1860.

Prop'y subject to tax.	Value in 1859.	Do in 1860.
Land....	$149,547,889	$161,764,955
Slaves...	271,620,504	302,694.355

Total public debt in bonds.....	$2,670,750

There are twenty-five banks in operation in Georgia, with an authorized capital of $17,000,000, but they only employ $9,028,078. The tax in this State on Bank Stock is 39 1-16 cents on the $100, or six times more than other capital.

There are eighteen agencies of South Carolina Banks in Georgia, and they pay taxes only to the amount of $1,830 74.

* The State of Georgia in 1848 reserved to itself the right to redeem certain bonds after ten years. These amounting to $218,000 are within that reservation.

The Controllers report contains a list of the names of the agents, and names of Insurance Companies in Europe and America, which pay taxes in this State. The total tax paid by them is $1,578 68.

The report also gives a synopsis of the several Bank charters; when the banks were chartered; the time the charters expire; the capital stock; the amount of business authorized to be done in proportion to the capital stock paid in; the personal liability clause, &c. Also, a list of the banks which withdrew from business with credit; Banks chartered that have never gone into operation; Banks that went into operation, but failed, or that suspended specie payments and business altogether.

Altogether, the report of the Controller-General of Georgia is a valuable and interesting document to financial circles.

Journal of Commercial Law.

CORPORATIONS: RIGHTS OF STOCKHOLDERS; DIRECTORS NOT AUTHORIZED TO SELL ASSETS.

In 1850 Charles Goodyear, who had then recently invented his process of vulcanizing India rubber, applied to Gorham D. Abbott, principal of the Spingler Institute in the city of New York, and solicited him to take an interest in the development of the new invention in its application to educational apparatus. Some negotiations took place, the result of which was that Mr. Goodyear gave Mr. Abbott certain powers over the use and application of the invention to the manufacture of maps, charts, globes, black boards, slates, etc. These rights and powers thus vested in him by Goodyear, he subsequently transferred to the Beacon Dam Company, a corporation existing under the laws of the State of Connecticut, to which corporation he had contributed a large portion of the funds required in the company's establishment, and the erection of its buildings, purchase of tools, machinery, etc. The corporation was originally organized in May, 1852, with a capital of $25,000, composed of 1,000 shares of $25 each, and was called the Beacon Dam Company, and would appear to have been organized for the object and purpose of building and maintaining a water power, on the Naugatuck River, in Connecticut, and for carrying on a manufacturing business generally. The name was subsequently changed to "American Hard Rubber Company," and in January, 1853, the capital stock was increased from 1,000 shares to 4,000 shares of $25 each, the plaintiff subscribing for and taking the 3,000 additional shares, retaining 1,000 of them, and distributing the other 2,000 among different parties. The increase of capital took place solely with reference to the business of manufacturing India rubber goods under Goodyear's patent; and all the stockholders agreed from that time to enter upon and prosecute exclusively the business of manufacturing articles of the patented compounds of India rubber, and from that time the manufacture and sale of such articles would appear to have been the only business of the company. In the course of time the directors, deeming it their advantage, negotiated a sale of the company's franchises and property, which sale and transfer being against the wishes of Mr. Abbott, he, as a stockholder, brought a suit in the New York Supreme Court to restrain the defendants from carrying into effect. This suit has just been decided, and we give the substance of the opinion of the court upon the question as to the power of directors to sell out their property and franchises.

SUTHERLAND, J.—I think the sale and transfer, by the four directors, of the entire property of the company, except its real estate, with its machinery and fixtures was void as to the plaintiff and such other stockholders as did not consent to or authorize a sale. I do not think that it appears that a majority of the stockholders did in fact authorize the sale, but had the sale been authorized by a majority of the stockholders, or by stockholders representing a majority of the stock, I think it would have been void as to the plaintiff and other stockholders not consenting to or authorizing it.

In looking at this question as to the power and authority of the Directors to make the sale and transfer, with or without the authority of a majority of the stockholders, so as to be valid as to and bind the stockholders who did not consent, in this case, and as between these parties, the company should be considered as chartered and organized for the sole purpose and object of manufacturing goods or articles of India rubber, or of its patented compounds under the Goodyear patents.

This being so, I think the sale in question was void as to the plaintiff and other stockholders not consenting, because its effect was, and must necessarily have been to discontinue all business of the corporation, in effect to dissolve it, and I must presume on the conceded facts of this case, that the parties to the sale knew or anticipated that such would be the effect and consequences of the sale.

The Directors sell in one lump not only all the stock of the corporation, manufactured and unmanufactured, but all rights of the corporation under the patents to manufacture any more, and all its property of every description, except the water power and real estate, with its machinery and fixtures, in Connecticut, which they at the same time lease to Poppenheusen & Konig, for one year, thus, by this sale, discontinuing or destroying all business of the corporation for a term, at least; and by the sale of the patent rights, or of the corporation's right to manufacture under the patent rights, forever putting it out of its power, without re-purchasing the right to do so, to further prosecute the only object and purpose and business for which it had been organized, and which it had prosecuted, and thus leaving the corporation a mere skeleton, with a name, and perhaps a legal technical existence by the Statute book, but without real life, or business or usefulness.

I do not think the Directors, even with the consent of a majority of the stockholders, had a right, as against stockholders not consenting, thus in effect to discontinue its existence, and defeat the object of its organization.

I must assume that these Directors were chosen to manage the business of the corporation, not to destroy and end it.

If the corporation was insolvent, it is presumed the laws of Connecticut had provided a mode of having it dissolved; if it had good cause to surrender up its franchises to the Government, it is presumed the laws of the same State had also provided for that. But I cannot presume that the Directors, or a majority of the stockholders of the corporation, by any law of Connecticut or otherwise, had a right thus, by voluntary sale, to dis-

continue its existence, and in effect surrender its franchises, without consulting the Government or its creditors, and without the consent of a minority of its stockholders.

To hold that the Directors could thus discontinue, wind up and defeat the purpose, object and business for which the corporation was organized, even with the consent of a majority of the stockholders, so as to bind the minority not consenting, would, in effect, be depriving the minority, and every one of the minority, of their property without their consent.

No doubt that the principle that a majority must govern or control (in the absence of any special provision in the charter or constitutional articles,) applies to corporations, and that the minority are bound by acts of the majority, when those acts are within and according to the charter or constitutional articles of the corporation, and *not inconsistent with the object and purpose with which it was organized.* Such acts a stockholder consents to by becoming a member of the corporation, because he is presumed to know the law, and the rights of the majority by the law but this democratic or representative principle does not apply to an act or acts of the majority, inconsistent with the continued existence of the corporation and the very object and purpose for which it was organized; nor does a stockholder consent to such acts by becoming a member, because the law does not justify them; and he cannot be presumed to have anticipated a thought that such acts would ever be perpetrated or attempted by the majority.

The sale and transfer in question was not and did not purport to be a sale of the property of the corporation for the benefit of its creditors. If the property was sold for its full value, the creditors would have a right to complain, for it was not a sale for money, but for promissory notes payable at a future day; and although the notes may be good, and the makers abundantly responsible, yet the corporation, or its directors, had no right to compel the creditors to wait until the notes were paid.

In passing the resolution, relied upon by the defendants as an authority by a majority of the stockholders to make the sale and transfer, it would appear that a majority of the shares voted on, were voted on by proxy. I must presume, in the absence of anything to show the contrary, that these proxies were ordinary proxies, given with reference to the transaction of the ordinary and legitimate business of the corporation, and that they did not and could not authorize votes for so extraordinary a sale and transfer as the one in question. Hence the resolution cannot be said to have been in fact passed by a majority of the stockholders, and its passage can hardly be claimed as an authority by the majority.

A similar remark may be made as to the Connecticut statutes referred to by the counsel for the defendants authorizing a majority of the stockholders to transact business and not less than three directors to manage the affairs and business of corporations; these statutes must be presumed to have been intended to apply to the ordinary and legitimate business of corporations, and not to so extraordinary a proceeding as the sale and transfer in question.

The purchasers cannot be considered as *bona fide* purchasers for value without notice, for they did not give money or value, but their notes or promises to pay, and I must assume from the conceded facts of this case that they knew the purpose and object for which this corporation was organized, and the only business which it had prosecuted, and as they must also be presumed to know the law, I must also presume that they knew that directors, with or without the consent of the stockholders, had no right or authority to make the sale and transfer in question to them.

The sale being void, as to the plaintiff and other stockholders not consenting, it follows, I think, that the temporary injunction should be continued, and that a Receiver is necessary to preserve the property of the corporation within the jurisdiction of this court, for its creditors and stockholders, until the final decree in the action, or in the action in the Circuit Court of the United States, in aid of which it would appear that this action was brought, or until its dissolution may be decreed by the Courts of Connecticut.

Philadelphia City Passenger Railroads.

The following shows the length of road and number and amount of shares authorized by Passenger Railroad Companies in the City of Philadelphia:

Name of Road.	Length of single track.	No. of sh's ($50) authorized.	Amount of capi'l author'd.
Fifth and Sixth str's.	16¼ miles.	10,000	$ 500,000
West Philadelphia..	12½ "	10,000	500,000

Total.....	154⅞	174,000	8,550,000

Some of the companies have issued the whole number of shares authorized; others have issued over a hundred thousand dollars worth of stock per mile of single track laid. Nearly all of them have funded debts secured by mortgage upon their depots, cars, horses and rails. It is estimated that the actual outlay in building and equiping the eighteen roads was about two millions of dollars. This includes an investment of about three hundred thousand dollars in cars, mostly built within the limits of the city, and about a half a million dollars in depots and other real estate, out of which both land speculators and mechanics have made good profits. The advantages accruing to the general benefit from the development of this system may be briefly enumerated as follows:—The quickest, cheapest and most agreeable facilities of travel to all parts of the city; the surprising increase of the value of property upon the outskirts, now easy of access at all hours of the day and evening; the spreading of the laboring population to the suburbs and the consequent rapid extension of the city; the opening of new branches of occupation by the necessity created for conductors and drivers, and the building of cars; and lastly, the creation of an extensive and profitable investment for capital, the stock of some of these lines of railway being eagerly sought as safe and lucrative. But we should also take into consideration the fact that the success of our own railway system has stimulated a demand for Philadelphia improvements in other cities. Philadelphians have been called upon to introduce city passenger railways in Baltimore, Pittsburg, Cincinnati, St. Louis, New Orleans and other American cities, and Philadelphia cars and other equipments for the roads are in demand. It will be seen, therefore, that while ministering to our own convenience and improvement, the local railway system has contributed rather largely to the extension of our reputation and influence throughout the nation.—*Phila. Com. List.*

Columbus, San Antonio, and Rio Grande Railroad.

Among the recent arrivals, we notice that of Mr. Bentley D. Hasell, late chief engineer and general superintendent of the New Orleans, Jackson and Great Northern railroad.

Mr. Hasell we understand, leaves in a few days for Houston and Columbus, Texas, to enter upon his new duties as chief engineer of the Columbus, San Antonio and Rio Grande Railroad—the surveys and location of which will be commenced immediately, or as soon as the corps of engineers is organized.

In accepting this appointment, Mr. Hasell has declined four important positions that have been tendered him during the present summer—among which was the charge of the Memphis and Ohio railroad as their chief engineer and general superintendent, and the superintendency of the Alabama and Tennessee river railroad.

The city of New Orleans is deeply interested in the extension and progress of these east and west roads in Texas; the final completion of which will enhance the value of our property and increase our business to an enormous extent; and when we take into consideration the vast extent of territory and railroad connections that this road will include, its immediate importance, not only to New Orleans but to all roads diverging from, and in which our city is interested, can hardly be over estimated.

Such officers as Mr. A. M. Gentry, former by M. C., as president, and Mr. Hasell as chief engineer, will insure success to any enterprise to which they will devote their energy.

When this route is completed it will bring San Antonio within 560 miles of New Orleans. Starting from New Orleans over the New Orleans, Opelousas and Great Western railroad, and running west 125 miles to New Iberia, then connecting with the Texas and New Orleans railroad to Houston, a distance of 222 miles, when it will connect with the Buffalo Bayou Brozos and Colorado railroad to Columbus, a distance of 80 miles. At Columbus the connection is made with the Columbus, San Antonio and Rio Grande railroad, running through Gonzales to San Antonio, a distance of about 125 miles, and then westwardly to the Pacific ocean. These roads combined will form a grand trunk line of uniform gauge, connecting the interior and western portion of Texas with New Orleans and the entire railroad system of the United States, and will no less certainly be a portion of the main stem of *the* great Pacific railroad, and particularly do we come to this conclusion, when within two years private enterprise alone will complete the work from New Orleans to San Antonio, more than one third of the distance from that point to the Pacific ocean.

The advantages of the soil and climate of Texas are too well known to render it worth while to dwell upon them here. Her products are cotton, of the finest quality, with land adapted to its cultivation capable of yielding more than the entire crop of the United States (say 4,500,000 bales;) also, sugar, tobacco, and all varieties of cereals anywhere grown on the American continent. Nearly all sections of the state are well adapted to raising stock, and the western portions of it particularly adapted to sheep and the cultivation of wool superior as that of Australia. The salubrity of the climate of Texas, qualifies it pre-eminently as a sanitarian to the invalid. More than all this, we feel the necessity of the Pacific road, and of this route in particular, as bringing to our own city and our own doors the traffic and trade of the vast west, whereby New Orleans, her inter-

ests and her roads will be benefitted beyond calculation.

Our prominent citizens will be glad to learn that Mr. Hasell has identified himself with this work, and will wait with interest to read the report giving the result of his labors this coming winter.—*New Orleans True Delta, Oct.* 28.

Copper Mines of Lake Superior.

The Lake Superior *Miner* gives the September product of the Minnesota Copper Mine as 210½ tons; of the Nation, 80½; and of the Rockland, 50 tons. The *Miner* says:

At the Minnesota, great as have been her achievements for the past few months, her future still brightens. Longer strings of masses and more of them than have heretofore been recounted to jealous readers still appear in various portions of the mine, so that the expression, "what a world of copper," coming from the lips of first beholders, greets one in many a slope and level of this now mammoth concern. Perhaps it may be safely said that the most general diffusion of Copper is to be found in the western part of the mine, but the heaviest masses now exposed are in the more central and easterly portions of the mine."

At the Rockland, the mine has improved greatly; 30 tons of a large mass have been exposed since the September count. The National product is only kept down to 80 tons by the lake of sufficient stamps; 12 additional heads are to be immediately created. The veins of all three companies are richer than ever. In September the Copper Falls stamped 1,953 tons of rock; with the new machinery it will stamp 3,000 tons per month. The Ash-bed continues to yield 1 1-10 per cent. of pure metal. The Toltec is described as really improving; in one of the shafts a four-feet vein has been exposed, well charged with copper. At the Petherick, the ash-bed developments are encouraging; next Summer the calculation is to have rock enough and machinery enough to stamp 1,200 tons per month.

The Superior is noted as likely to pay its mining expenses this Winter; it is looking quite well. The *Mining Gazette* has a full and very complimentary account of the Albany and Boston, the gist of which is that all the work is done in the most thorough and judicious manner, and that there is "a rich, well defined vein, 2½ feet wide overlying the great conglomerate belt which runs parallel 275 feet westward." The Franklin has a very large accumulation of copper bearing rock on the surface. The stamps if we understand the description, would begin to work by January.

Boston and Maine Railroad.

The following paragraph, from the Newburyport *Herald*, concerning this well managed road, we believe to be true to the letter:

During the past season the Boston and Maine Railroad Company have entirely relaid their track from this city to Danvers, supplying new rails where it was necessary, and putting down upward of ten thousand new sleepers. The depots have been put in good repair, and nothing essential for the comfort and convenience of passengers has been overlooked. The accommodating spirit and liberal policy pursued toward the residents along this line of road, which has ever characterized the officers of this corporation, has made it one of the best paying roads in New England, and certainly one of the best managed.

The gentlemanly superintendent, Mr. William Merritt, has been distinguished for the great care and vigilance which he has always exercised for the safety of the traveling pubic. Every rail, bridge and culvert upon the entire route is daily examined by the section hands. Any recklessness or lack of vigilance on the part of any employee is sure to be followed by an immediate discharge, and consequently an accident upon this road is of very rare occurrence. When we take into consideration the innumerable trains laden with human freight which are continually passing and repassing upon this route, without accident or injury, it speaks louder than any comments of ours of its superior management.

Galvanizing Iron.

For the preservation of iron, various methods have been devised, namely, those which protect iron mechanically, by covering it with a coating not acted on by, and impervious to, the deteriorating principle, and those which protect iron chemically, by producing a change in its electric or electropolar condition with respect to the corroding agents. Any metal electro-positive to iron will answer for such a protector, but zinc is the only one known that can be practically used in the electro chemical preservation of iron. The process through which it passes is known by the name of "galvanizing;" and the *modus operandi* as shown at one of the largest establishments in the United States is as follows:—

Two kinds of iron are used, viz:—Pig iron, which is puddled and then rolled into bars and sheets for the use of stove-making, &c., and blooms, (technically called,) for galvanizing. These blooms come in square blocks about 4 inches wide by 12 inches long, of solid charcoal iron. These blocks are heated and rolled into bars (by a steam engine of 125 horse power) of about 2½ inches wide. They are then cut into lengths by a powerful cutting machine, each length being the width of the sheet intended to be rolled, the ordinary thickness being about five-eighths of an inch; this, however, varies. These blocks are then passed over to the other side of the mill, and are thon ready for rolling into sheets.

The first process is placing them into an oven, heating them almost to a white heat. Two, three, or four blocks, according to the thickness required, are then taken to the first rolling machine, operated on by two men; the first passing the iron through the rollers, which is caught by means of tongs by the other, and so on through the whole. The first man then, by means of two levers, screws the rollers a little tighter, and the iron passes out as before; and so it is passed backwards and forwards until from 2½ inches wide it becomes nearly 2½ feet. By this time it is getting cool, and is again sent to the oven. When it is sufficiently hot, it is handed over (as before) to another set of rollers. The same process is gone through, with this difference, that instead of passing each separately, the two three or four plates are placed one over the other and rolled together. Sometimes one rolling is sufficient, but at others they have to be again heated and rolled. After this process they are ready for the cutting machine to take of the jagged edges, and make them of equal lengths; from thence the sheets are taken to the galvanizing works. When they arrive, they are first treated to a bath of sulphuric acid; after that they are thoroughly washed in clean water, rubbed dry and examined. They are then immersed in a bath of nitric acid, from which they pass, by means of a car and rails, into the oven, where they are dried perfectly, and taken to the zinc bath. Here they get a coating of zinc a trifle thicker than the tin on tin plates, the zinc being heated to a state of solution. After being taken out of this bath and cooled, they are rubbed with cloths, for the purpose of removing the dirt, and again thoroughly examined, to see that the zinc coating is pefect. The iron is then packed in bundles and marked, fit for use, and will stand salt water or any kind of weather without rust.

The establishment where the above operations are carried on, have also machinery for galvanizing telegraph wire, of which they can turn out twenty miles a day; and we believe they are the only firm in this country who have the facilities of doing this kind of work to any extent.

The iron wire having been subject to the previous processes, is passed through the zinc bath as it comes from the reel, and ascends to the upper part of the building, where it is wound on another reel moved by steam power.

Duties on Railroad Iron.

United States Circuit Court, Nov. 2, before Justice Nelson. Ira Bliss agt. H. J. Redfield; Same agt. Aug. Schell; Septimus Crooks agt. Greene C. Bronson, Same agt. H. J. Redfield.

These were actions brought to recover an excess of duty paid on Railroad iron imported to the port of New-York from Cardiff and Newport, Wales, via Liverpool and London.

It appeared in evidence that the appraisers at the Custom House, under instructions from the Secretary of the Treasury, added to the market value of all railroad iron coming from Wales by way of Liverpool and London, 7s. 6d. sterling per ton, as freights or cost of transporting the iron from Wales to Liverpool or London, to make up the dutiable value at London, at the period of the exportation.

It also appeared that railroad iron is always bought and sold at a price *free on board in Wales*, and is always as a rule, *so quoted* in the circulars and prices current of Great Britain.

It further appeared that the iron in question was shipped at Cardiff or Newport, in Wales, for Liverpool or London, it was, in fact, destined to New York, and only went by way of Liverpool or London, as a matter of convenience to the importer, on account of the want of vessels at Cardiff or Newport bound for New York.

Nelson, C. J., held that the addition of the 7s. 6d. per ton freight was illegal; that the sea freight is not a dutiable charge, and the Government cannot now set up as a justification that the addition was to make market value at Liverpool and London, on the ground that those are the principal markets, because the evidence shows that Cardiff and Newport, in Wales, are the principal markets of Great Britain for railroad iron, and the fact that the iron makers have their offices in Liverpool and London, and negotiate there, sales there, does not make those places the principal markets, when it appears that there sales are always made at a price free on board in Wales.

Verdict for plaintiff.

Buffalo, Bradford and Pittsburg Railroad.

We learn that the entire line of the Buffalo, Bradford and Pittsburg Railroad, from its junction with the New York and Erie Railroad to the Coal Fields of McKean county, Pa., is being put in readiness for the iron, and that the contractors, Messrs. John S. King and Edward L. Lee, are pushing forward their work in the expectation of having this portion of road opened for traffic by the first of December. By the time that Winter has fairly established his rigorous rule, if nothing happens to disappoint present anticipations, our citizens may look for the introduction of the Tunnungwant coal into this market.

When so much has been accomplished, with the stimulus that has been re-imparted to enterprise this year by the astonishing revival of business and trade in all departments, it seems reasonable to expect rapid progress hereafter in the work of completing the long talked of direct connection, by railroad, between Buffalo and the coal regions of Pennsylvania. Following that, in the necessary order of events, must begin a new era in the history of Buffalo—the era of manufacturing greatness. More than ever does this appear the logical sequence of that event, since the fundamental enterprises which have been inaugurated during the past year. The prospect lends great significance to the event which we announce, and we cannot but congratulate our citizens upon its near approach.

The rails for the line of road which is near completion are from the "Bay State Iron Co.'s Works," and are being delivered via Piermont and the N. Y. & Erie Road.—This company have adopted the chair know as "Ransford's Patent," of Troy. The peculiarity of this invention is the jaw rising on the outside of the chair to a level with the top of

the rail, transferring, in part, the bearing of the wheel at the joints, and securing in effect the action of a continuous rail. The preservation of the rails at the joints is fully attained by this invention.—*Express.*

Cape Cod Canal.

The survey of the proposed route of the Cape Cod Canal, extending from Buzzard's Bay to Cape Cod Bay, and designed to avoid the somewhat dangerous navigation *around* the Cape, has been executed by the engineers of the U. S. Coast Survey. It is expected that the Commissioners who have this work in charge, will, after the receipt of the data from the officers who have been thus employed, shortly report upon this subject.

From a conversation with one of the gentlemen engaged in the service, we infer that so far as the land work is concerned—that is, the adaption of the valley through which the proposed canal is expected to run, to the purpose—there is no difficulty whatever. This valley, about eight miles in length, from shore to shore, rises but slightly from the sea level and is watered by natural streams throughout its entire length, while the character of the soil in the vicinity is peculiarly favorable. The great difficulty, if any exists in the enterprise, is to be found in the necessity of the construction of an artificial harbor at the Cape Cod Bay terminus of the route. It will, probably, be necessary to erect here a breakwater, as a harbor to incoming and outgoing vessels, in case of bad weather. The cost of this will be a subject of consideration. Should the saving of property be deemed sufficient to warrant the expense, the canal will probably be constructed.—*Transcript.*

Railways in Switzerland.

The *Price Current* gives the following, relating to the Swiss Railways:

"Railway system of Switzerland is making rapid progress. It already furnishes an almost unbroken connection between all the most considerable towns of the confederacy, and bids fair soon to scale the gigantic barrier of the Alps, and to form a junction with the roads which in various directions cross the great Lombard plain and penetrate the mountain regions of Piedmont on the west and south. The Swiss Central Railway, leading from Basil towards Berne, after piercing the mountain wall of the Hauenstien, by a tunnel twenty-seven hundred yards in length, branches or falls into other roads, which run in every direction. From Olten a line runs north-east to Badin, Zurich, St. Gall, and doubling the mountain cape, at the entrance of the Rhine into Lake Constance, it ascends for the most part the left bank of that river to Chur in the Grisons. From Aarburg another line runs to Lucerne. A third, from Herzogenbuchsee, by Solothurn, Neuchatel, Yoerdon and Lausanne, extends to Geneva, having only a small link yet incomplete along the lake of Bienne; and yet a fourth from the same point to Berne and Thun. Here the last named line strikes the stupendous mountain range of the Bernese Oberland. The Jungfrau, Eigher, Monch, Schreckhorn and Finster-Aarhown will hardly permit their untrodden snows, during the present century, to be trampled by the hoofs of the iron horse. A road is in progress from Berne to Lausanne, by the way of Freiburg, and on the first of the present month was opened as far as the latter city. Another, passing from Lausanne around the eastern end of Lake Geneva, will soon connect the city of Geneva with the so-called Italian line in the Vallais. This latter railway extends from the eastern end of the lake up the valley of the Rhone. During the present season it has been completed as far as Sion. From this point, the capital of the Canton, it is to be carried to Brieg, and is destined, I believe, to scale the Alps by the great Simplon pass. A line across the Alps is also in contemplation further east by some one of the Grison passes; and I have recently read an article, in one of the Swiss journals, warmly defending the claims of the Lukmanier route by the valleys of the Vorder, Rhine and Medels, which was surveyed some years since.

In my last I gave some account of my visit to the field of Morgarten. In this I must transport myself to the Canton of Berne. The approaching evening of one of the last days of June found me seated in the railway train, on the line between Herzogenbuchsee and Berne. Two years since, on this line, the passengers were obliged to alight some two miles north of the city, to which they were conveyed by omnibuses. At present, as above stated, the line is finished to Thun. Passing the former terminus, the road crosses the Aarby a bridge suspended at a fearful height above the river-bed, and reaches the elevated peninsula, upon which the town is built, in the rear or western extremity of the city. Here I found a magnificent depot, corresponding in the solidity of its structure, with the well known massive architecture of Berne."

Junction Railroad.

We stated some weeks since that nearly sufficient money had been raised to complete the Junction Railroad from College Corners to Connersville. We now learn that J. M. Ridenour, President of the company, has purchased iron enough to lay the track from College Corners to Silver Creek, half a mile west of Liberty. Work has been again commenced, and the track will be laid to Liberty by the first of January. It is intended to complete the road to Connersville by the first of June next. —*Cin. Com.*

Railroad Earnings.

The traffic of the Illinois Central Railroad Company for October, 1860, was $306,711 39
October, 1859 ..... 248,962 86

Increase $57,748 53

From the Land Department, the report is extremely favorable, viz: $140,489 68, cash collected and $293,971 42 sales of land during the month. The sales and collections before the harvest, averaged about $50,000 per month.

The earnings of the Hudson River Railroad for

October, 1860, were $193,950 63
Do. 1859 ..... 170,157 48

Increase $23,793 15

The earnings for the same month for the last three years were as follows:

1858 ..... $140,782 87
1859 ..... 170,157 48
1860 ..... 193,950 63

The increase on 1858, is over $53,000.

The earnings of the Chicago, Burlington and Quincy Railroad Line in October, were:

	1859.	1860.
Freight	$131,268 53	$176,841 00
Passengers	50,715 48	62,674 82
Mails and miscellan.	4,203 93	2,948 20
Total	$186,187 94	$241,964 02
Increase		$55,776 08

The earnings and expenses of the Cleveland and Mahoning Railroad for the month of October were as follows:

	1859.	1860.
Passengers	$4,972 98	$5,859 20
Freight	11,561 53	16,058 59
Coal	14,254 90	19,447 33
Mail	262 50	418 75
Gross earnings	$31,051 91	$41,783 87
Expenses	9,469 95	11,090 88
Net earnings	$21,581 97	$30,692 99
Increase		$9,111 02
From Jan. 1, to Oct. 31:—		
Gross earnings	$231,933 41	$312,559 12
Working expenses	83,148 74	104,546 19
Net earnings	$148,784 67	$208,012 93

The sixth monthly (September) report of the Ohio and Mississippi Railroad has been filed with the Clerk of the United States District Court of Ohio:

Balance on hand from August account. $50,475 19

RECEIPTS.

Freight earnings of August.	$1,715 80	
Passengers prior to Sept.	15,674 44	
Freight do.	11,690 84	
		29,080 58
Passenger earnings in Sept.	45,872 51	
Freight do.	23,162 92	
		69,035 43
From other sources		1,277 11
Total		$149,868 31

DISBURSEMENTS.

Operating expenses in Sept.	$9,400 16	
Charges advanced on acc't other roads	1,160 10	
Interest and discount	748 86	
Office and other expenses	589 74	
Advances by Receiver on former months to meet payment	15,000 00	
Paid on account 1st mortgage coupons due Jan'y 1, 1860	770 00	
Do. July 1, 1860	11,935 00	
On acc't of former arrearages	175 09	
Current operat'g expenses, and construction work for August	73,470 42	
		113,244 37
Balance carried to October acc't		$36,623 94

The earnings of the Cleveland and Toledo Railroad for October, were $93,583
October, 1859 78,282

Increase $15,301

The receipts of the Grand Trunk Railway of Canada, for the week ending October 26th, 1860, were $81,122 56
Corresponding week, 1859 ..... 60,046 16

Increase $21,076 40

Total traffic from July 1, 1860 ..... $1,045,186 45
Do. for same period last y.. 773,916 66

Increase $271,269 79

The following are the earnings of the Great Western Railway of Canada for the week ending October 26, 1860:

Passengers	$23,218 03
Freight and live stock	30,882 45
Mails and sundries	1,421 63
Total	$55,467 11
Corresponding week of last year	46,245 05
Increase	$9,222 06

Cincinnati Stock Sales.

American Railroad Journal.

Saturday, November 10, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

Share and Money Market.

There has been some improvement in the share market during the week, though the tendency at the close of it is downward. The election has taken place, and with it a potent element of disturbance is removed. But the effect remains to be developed, and till this is more fully seen, any considerable advance cannot be reasonably expected. In the mean time the traffic of our railroads is excellent, and must continue so through the winter, so that whatever may be the prices of shares, they are steadily increasing in intrinsic value.

The only cloud hanging over the market is a political one. We shall soon see whether this is to expand or fade away. We referred to that subject somewhat fully last week. The subject is an interesting one, both as regards business matters and as illustrative of the character of our institutions.

Nashville and North-western Railroad.

The progress of the work on this road, the Nashville *Patriot* says, gives promise of its early completion. State bonds amounting to $175,000, have been issued to the company for the Western Division, showing 17½ miles eastward from the last terminal point of the work ready for iron. We have late information that the grading is done to a point three miles east of Huntingdon, making, in all, about 70 miles completed on the Western Division. The work on the Eastern is more difficult than that on the Western Division, but it is progressing with satisfactory vigor. The track-laying on this Division has reached a point 18 miles west of Nashville, but will have to be

stopped soon for want of iron. As soon as navigation opens, the iron will be brought up, the work will be resumed, and the track will soon be completed to Kingston's Springs, a distance of 24 miles. The grading beyond that point is being pushed forward, and will be ready, we are told, for the track-layers to the Tennessee River by next summer.

Chicago and Rock Island Railroad.

The earnings of this road for the fiscal ending July 1, 1860, were:

From passengers	$348,092 80
" freight	705,791 31
" mails, etc.	40,049 66
Total	$1,093,933 77

And the expenses were:

Repairs of road	$105,224 16	
" engines	39,733 70	
" cars	54,787 25	
" bridges	16,587 72

Tracy, Chicago, Ills.: Robert A. Forsyth, Newburg, N. Y.; Theredore S. Faxton, Utica, N. Y.; Ebenezer Cook, Davenport, Iowa.

Treasurer—E. W. DUNHAM.

Superintendent—JOHN F. TRACY.

Mississippi and Tennessee Railroad.

The gross receipts from transportation on this road for the fiscal years ending 1st October, 1859 and 1860, were as follows:—

	1859.	1860.
From Passengers	$65,394 24	$77,598 28
" Mail service	4,425 00	4,425 00
" Adams Express		1,447 75
" Freight	106,643 55	150,056 06
	$176,462 79	$233,527 09

—the mileage operated in 1859 was 65 miles, and in 1860 81 miles, and the earnings in those years were respectively $2,714 and $2,883 per mile.

The operating expenses in 1860 amounted to	99,392 41
